

Sustainability commitment

Measure implemented to lower carbon footprint throughout product life cycle, from design to disposal.

Responsible manufacturing processes help reduce waste, facilitate dismantling and recycling, and increase landfill diversion.

Use of aluminum

Locally sourced aluminum, well known for its durability and recyclability.

Aluminum extrusions ensure structural integrity of fixtures.

Aluminum composite material (ACM) – lighter, more transportation friendly and less energy intensive than aluminum – used for side paneling.

Addressing light pollution

All Zilux products are dimmable and compatible with controls that minimize light intensity in outdoor spaces.

We are improving our products to maximize dark-sky performance and obtain IDA compliance.
