

Custody Transfer Measurement System

Consideration of alternate procurement strategies for the Client to achieve independence from a single supplier for their custody transfer measurement systems. This measurement system included the following components:

- Skid mounted meter systems (Coriolis and PD type)
- Skid mounted bi-directional meter prover system
- Quality management building and sampling system
- Measurement control system (control panel)

Alternate Procurement Strategy

Rally developed multi-discipline material requisitions (MRs), scope of work, and request for proposal (RFP) documents for each of the packages noted above. This included the evaluation and incorporation of enhancements captured by the client as lessons learned and changes that had occurred during construction, commissioning, and as-building stages.

The package, including drawings, datasheets, and models, would ensure any vendor could build the skid(s) to the Client's specifications and that each component could be integrated to form one complete system.
