Connect dingz to Wifi

Connect to Wifi in Just a Few Steps

Easily connect your dingz switch to your Wifi network and unlock its full smart potential. Enjoy more control, comfort, and automation – even without a constant internet connection.

With just a few taps, you can bring your dingz switches online and start enjoying the full smart home experience. Whether it's for app control, automation, or custom scenes – a Wifi connection is the key to unlocking all advanced features.

Setup is quick and easy: activate the switch, connect it to your target network, name it, assign it to a room – and you're done. And the best part? The system works even without an active internet connection – perfect for local-only networks.

The built-in web interface gives you even more customization options. Smart living, made simple.

Note:

Time and functions with sun position are not available without Internet connection.

3. Activate AP mode on the dingz:
Press the two right-hand buttons on the dingz to activate AP mode (the dingz access point will start).

4. Confirm the connection:
Once the dingz LED blinks orange, tap Next and confirm the connection to the dingz network.

5. Assign a name

Enter a name for the switch and the room. The room name allows you to group multiple switches located in the same space (e.g., master bedroom).

Or tap Skip to continue without entering a name.

6. Select target Wi-Fi

Choose your desired Wi-Fi network and confirm with the password. The password can be saved to simplify adding additional devices later.

Tips & Tricks

The mobile device can also connect directly to the dingz Wi-Fi network named **dingz-xxxxxx**. No password is required for this network.

Using a browser (Safari or Chrome), the web interface can be accessed directly via the address **192.168.1.1**.

The device can also be assigned to the target Wi-Fi network via the web interface under the Wi-Fi section.
