

Take Control of Your Digital Footprint

Google Search Data Removal

Your Personal Information Is Exposed on Google

In today's interconnected world, your personal information often appears in Google search results **without your direct consent** or even your knowledge. This data is aggregated from various online sources—public records, old directories, data brokers, and even forgotten profiles—making it readily accessible to anyone who searches for you.

The Hidden Dangers of Online Exposure

Identity Theft

Bad actors can use the "breadcrumbs" of your data sprinkled throughout websites to piece together enough information to **steal your identity**.

Scams

Cybercriminals can gather information to craft sophisticated phishing attempts, deepfake scams, and other personalized tactics that **trick you into revealing sensitive data** or handing over money.

Physical Safety Concerns

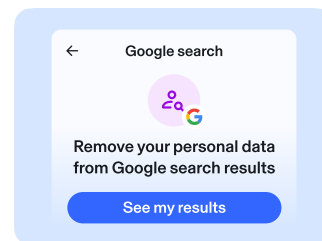

The public availability of your name, address, or places you've visited (often spread through social platforms) can **compromise your personal safety**.

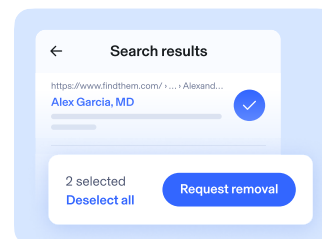

Reputation Damage

Outdated or unflattering information found in search results can **unfairly impact** your professional opportunities, personal relationships, or overall public image.

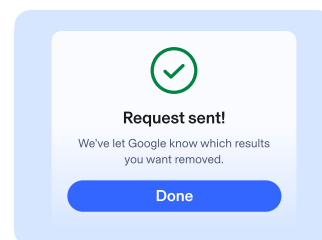

Scrub Your Data from Google Search in a Few Clicks

Activate Aura's Google Search Data Removal feature **with one tap**.

Aura performs a Google search and **returns the results**. Select the links you want to remove.

Aura **automatically submits** a privacy form through Google to de-index the search results.

Benefits

- Proactive Digital Cleanup
- Mitigate Identity Theft Risks
- Enhanced Privacy
- Simplified Process
