The Raynor Cerebellum Project is building something the field of cerebellar and ataxia research genuinely needs: a best-in-class patient and caregiver resource website for people living with cerebellar disorders.

**We are looking to hire postdocs, faculty, or other experts who want to be part of building this resource.**

This isn't a volunteer ask. This is a structured, compensated part-time role (~2-4 hours/week) for someone who is already passionate about cerebellar science and wants to put that passion to work for the patients who need it most.

**What the role involves:**

- Writing accessible research summaries that translate current science for patients and families
- Curating and developing content for caregivers and family members of persons with cerebellar differences
- Helping shape and maintain the site as it grows over time
- Receiving named contributor credit on the published site and a clear CV line item

**Who we're looking for:**

- An active postdoc or faculty member in a cerebellar or ataxia-adjacent lab
- Someone who wants to help patients and families understand what we do and why it matters
- Someone very comfortable writing for a non-specialist audience
- Able to commit to a consistent, part-time schedule alongside your primary research role

This is a real opportunity to shape a resource that newly-diagnosed patients, confused families, and overwhelmed caregivers will actually find and use.

If this sounds like you, or if you know someone in the network it might fit, please reach out to Mary Jane Elizalde, a program scientist of the RCP ([melizalde@raynorcerebellumproject.org](mailto:melizalde@raynorcerebellumproject.org)). We'd love to have a brief conversation.
