# Be aware of CRA - EU Cyber Resilience Act
WE ARE READY - ARE YOU?

What is the CRA?

The **Cyber Resilience Act** is the first European regulation to set a minimum level of cyber security for all connected products available on the EU market - something that has not existed before. The aim is to increase Cybersecurity within the European Union. The new regulations apply in all EU member states and will be implemented gradually.

Lantech successfully implemented in their managed series OS2Pro and OS5 all requirements from the IEC62443-4-2 according the development processes of IEC62443-4-1. We are ready to support public transport - but not only - with the necessary infrastructure for resilient networks. We protect the data in the network with automatic OTP-mechanisms and encryption to ensure reliabilty and secure communication minimizing the risk for cyber attacks. The Cyber Resilience Act is now active and forces all system integrators, operators and manufacturers to build their systems for the near future with High-Level-Security.
