## OVERVIEW

Lantech I(P)GS-3208C is a high performance L2+ all Gigabit switch with 8 10/100/1000T + 2 x 10/100/1000T/Dual Speed 100/1000M SFP combo (w/8 PoE 802.3af/at ports) which provides L2 wire speed and advanced security function for network aggregation deployment. It delivers ITU G.8032 enhanced ring recovery less than 20ms for single ring, comprehensive QoS, VLAN, GVRP, advanced security SSH v2/SSL, INGRESS ACL L2/L3, IGMPv1/v2/v3/router port, DHCP server/relay, jumbo frame which are important features required in mid and large network. It also supports Cisco Discovery Protocol (CDP) and LLDP for Ciscoworks to detect

the switch info and to be shown on L2 map topology.

### PoE at/af up to 8 Giga Ports with detection and scheduling

Lantech IPGS-3208C supports advanced PoE management including PoE detection and scheduling. PoE detection can detect if the connected PD is hanged then restart the PD; PoE scheduling is to allow pre-set power feeding schedule upon routine time table. Each PoE port can be Enabled/disabled, get the voltage, current, Watt, and temperature info displayed on WebUI.

**Miss-wiring avoidance, Node failure protection, Loop protection**

The I(P)GS-3208C also embedded several features for stronger and reliable network protection in an easy and intuitive way. When the pre-set ring configuration failed or looped by miss-wiring, Lantech I(P)GS-3208C is able to alert with the LED indicator and disable ring automatically. Node failure protection ensures the switches in a ring to survive after power breakout is back. The status can be shown in NMS when each switch is back. Loop protection is also available to prevent the generation of broadcast storm when a dumb switch is inserted in a closed loop connection.

**User friendly GUI, Auto topology drawing**

The user friendly UI, innovative auto topology drawing and topology demo makes I(P)GS-3208C much easier to get hands-on. The complete CLI enables professional engineer to configure setting by command line.

**Enhanced G.8032 ring, 8 MSTI MSTP**

Lantech I(P)GS-3208C features enhanced G.8032 ring which can be self-healed in less than 20ms for single ring topology protection covering multicast packets. It also supports various ring topologies that covers enhanced ring and basic ring by easy setup than others. It supports MSTP that allows each spanning tree for each VLAN for redundant links with 8 MSTI.

**DHCP option 82 & Port based, Mac based DHCP, Option66, DHCP Snooping**

DHCP server can assign dedicated IP address by MAC or by port (Port based for single switch), it also can assign IP address by port for multiple switches with single DHCP option82 server. DHCP Snooping is supported. DHCP Option66 server can offer IP address of TFTP server to DHCP client for VOIP application.

**GVRP supported**

It supports the GVRP for large VLAN segmentation.

**IGMPv3, GMRP, router port, static multicast forwarding and multicast Ring protection**

The unique multicast protection under enhanced G.8032 ring can offer immediate self-recovery instead of waiting for IGMP table timeout. It also supports IGMPv3, GMRP, router port and static multicast forwarding binding by ports for video surveillance application.

**Editable configuration text file; Factory reset button; CPU watchdog**

The configuration file of Lantech I(P)GS-3208C can be exported in text file so that it can be edited and configured back to switch with ease for mass deployment. Factory reset button can restore the setting back to factory default and built-in watchdog design can automatically reboot the switch when

CPU is found dead.

**USB port for back up, restore configuration and upgrade firmware**

The built-in USB port can upload/download the firmware through USB dongle for switch replacement.

**E-marking certificate**

The E-marking certificate makes it the most suitable PoE switch for bus, carriage, other vehicles application as well as for industrial areas where the power source is limited with 24V but has demand of IP surveillance or VoIP applications. Only 24VDC input system is applicable for E-mark approval.

**Event log; 2DI / 2DO; Relay alarm**

In case of event, the I(P)GS-3208C is able to send SNMP Traps out immediately. It provides 2DI and 2DO. When disconnection of the specific port was detected; DO will activate the signal LED to alarm. DI can integrate the sensors for events and DO will trigger the alarm while sending alert information to IP network with traps.

Featured with relay contact alarm function, the I(P)GS-3208C is able to connect with alarm system in case of power failure and port disconnection. In case of such event, it will send out trap alerting to predefined users.

**Optional environmental monitoring\*\* for switch inside information (-M model)**

The environmental monitoring can detect switch overall temperature, voltage and current where can send the SNMP traps when abnormal.

**Dual power input design (12V or 24V or 48V input)**

Lantech IPGS-3208C-12V is designed with dual input power at 9.5V~56VDC while IGS-3208C-12V is at 9.5V~60VDC. I(P)GS-3208C-24V model allows with 9~36VDC input and 48V model with 44V~56VDC for PoE model. The PoE budget for 12V input is 80W and for 24V input is 120W, for 48V input is 240W. (For PoE Model)

**High reliability and extended working temperature**

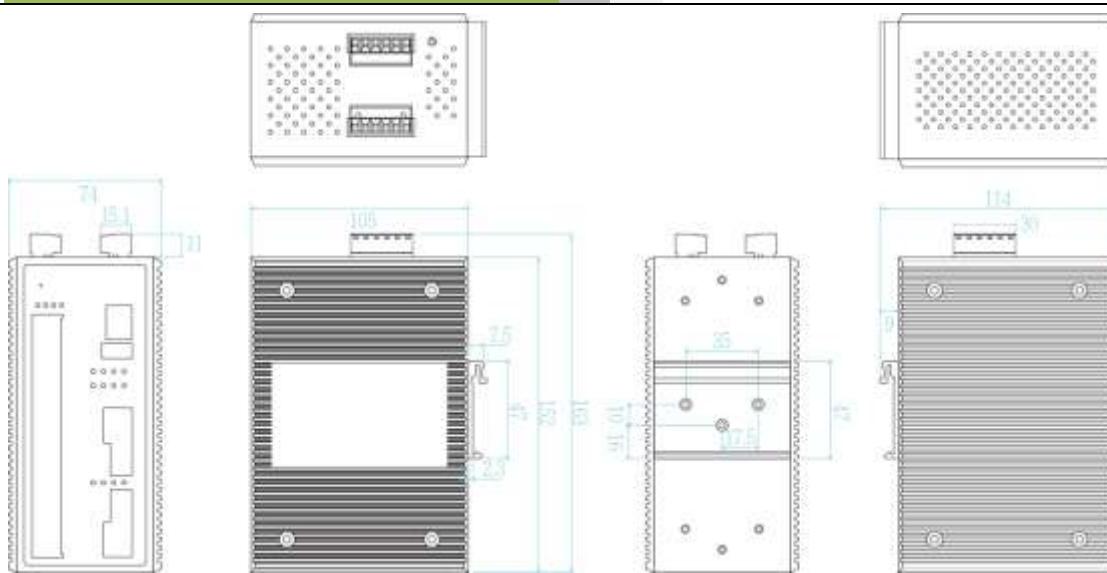

Lantech I(P)GS-3208C provides ±2000V EFT/SURGE and ±4000 VDC (Contact) / ±8000 VDC (Air) Ethernet ESD protection, which can reduce unstable situation caused by power line and Ethernet. It has high reliability and robustness coping with extensive EMI/RFI phenomenon, environmental vibration and shocks usually found in Automation, transportation, surveillance, Wireless backhaul, Semiconductor factory and assembly lines.

The -E model can be used in extreme environments with an operating temperature range of -40°C to 75°C.
