

# Reinke **CONNECT FOR REMOTE OPERATIONS**

Published by Reinke Manufacturing Co., Inc. | 1040 Road 5300 Deshler, NE 68340 | 402-365-7251 | [www.reinke.com](http://www.reinke.com)

Every producer is looking for ways to eliminate unnecessary costs and improve their productivity. The RPM Connect™ main control panel provides the technology needed to accomplish this goal. The Connect panel stands out for progressive growers who are constantly connected to a smart device and want field information and control on the go.

The Connect panel gives growers the freedom to operate irrigation systems from any smart device. Remote communication is used to control the operations formerly controlled from the panel. This leading technology utilizes ReinCloud®, a powerful web-based software platform. With the ReinCloud dashboard, it is possible to monitor and operate numerous pivots from one location.

With smart devices always in hand, 24/7 access is both convenient and a huge cost savings. There's no need to be near the pivot to monitor or operate it. Saving labor and time are obvious benefits and increased productivity is an indirect effect. By saving time using remote technology, the grower frees labor resources that can be directed to other projects.

The Connect panel eliminates unnecessary costs associated with components on the panel that were once needed. The Connect panel removes the full user interface display, which is no longer needed since the user interface is now shown on a smart device. The costs once associated with those components are now eliminated. Any control capabilities that have been removed from the panel are available on a smart device and basic control functions, such as stop, start, forward and reverse, are still available on the panel.

By operating the farm remotely and having the reassurance systems are running smoothly and saving valuable resources such as labor, the progressive farmer can quickly build profits and reinvest it in their operation.

Providing peace of mind is important. The Connect comes with a five-year warranty. The Reinke Certified dealership network comes with years of experience, so growers know they will receive service that can't be matched.

Already have an existing RPM main control panel? Upgrade the faceplate and enjoy the benefits of the Connect panel today. The Connect is available with new systems, as a complete panel replacement or by upgrading the faceplate with an existing RPM main control panel. With these convenient methods to upgrade to the latest technology and provide increased savings and productivity, growers will know the Connect is a necessity to their operation especially when they're always on the go.

No matter what option growers want, Reinke has a product that will provide added value for their operation. The Connect is just one of the newest additions to the RPM panel line. Discover the possibilities of the RPM line of products, including the Advanced Plus™ and Annex™ panels.
