Copper/Gold Exploration
Unveil the Wealth Beneath

La Estrella Project

 Santander, Colombia

Fully Permitted Coal Resource
Fueling Progress, Building Legacy

UNVEIL THE WEALTH BENEATH

ALOTTA PROJECT

 Yukon, Canada

The Alotta project spanning over 4 x 1 kilometers has revealed a large porphyry-related hydrothermal system through gold/copper geochemical anomalies and magnetic depletion. High potassium counts from a radiometric survey further indicate significant potential.

Property Size: Comprises 230 mineral claims covering 4,723 hectares.

Location: Located in the Yukon Territory approximately 40 kilometers southeast of Western Copper and Gold's Casino deposit, one of the largest undeveloped gold/copper deposits in the world.

Geological Context: Situated in the same Dawson Range intrusive complex that hosts the Casino deposit.

Geochemical Anomalies: Absence of glaciation indicates no dispersion of in-soil geochemical anomalies.

“To date every drill hole completed on the property has intercepted significant lengths of both disseminated and fracture controlled gold mineralization”

Drilling Highlights

ALT-23-001

211.65 m of 0.46 g/t Au from 7.35 m - 219 m
including 22.45 m of 1.20 g/t Au
including 0.64 m of 9.94 g/t Au

ALT-23-002

99.14 m of 0.30 g/t Au from 62.86 m - 162 m

ALT-25-012

3.15 m of 45.01 g/t Au from 286 m
including 1.25 m of **105 g/t Au**

FUELING PROGRESS, BUILDING LEGACY

LA ESTRELLA PROJECT

Santander, Colombia

Aion Mining Corp's La Estrella Coal Project benefits from rich coal seams, recent and historical technical reports, and excellent infrastructure. With stockyards 40 km from Atlantic ports, it's primed for efficient exports.

Ownership: 40% interest in a fully permitted coal project, with a Letter of Intent (LOI) to increase to 60%.

Location: Located in Santander Colombia, with excellent regional mining infrastructure.

Known Coal : Eight known seams of metallurgical and thermal coal, documented on recent and historical NI 43-101 reports.

Permitting and Licensing: Fully permitted under Colombian law, including environmental licensing.

Since 2023, extensive site preparations have been completed, including the establishment of a 10,000 m² works yard, setting the foundation for further development.

“Our primary objective is to secure a substantial bulk sample that will unlock a significant revenue stream and valuable information to further advance the La Estrella project.”

Upcoming developments include the near completion construction of a portal for a revenue-generating bulk sampling program. Recent and historical NI 43-101 reports and drill programs have confirmed the existence, location, and quality of the coal seams, ensuring the project's viability.
