

One Source, From Concept to Commercialization

CleanSpace is a top design-builder delivering controlled environments with full oversight of CapEx, OpEx, and operational objectives. From concept through completion, we provide integrated solutions that mitigate risk, ensure compliance, and prepare facilities for reliable, high-performance operation.

With strategically located manufacturing facilities, national warehouses, and a robust stocking plan, CleanSpace minimizes supply chain disruptions and delivers critical systems on schedule, keeping projects on track and fully operational from day one.

Owner's Representative & Concept Review

CleanSpace engages at the earliest stage to help Clients shape the right project from the start. Acting as a trusted advocate, we align vision, budget, schedule, and regulatory requirements while guiding early planning, feasibility, and strategic decision making. Our team provides technical insight and industry expertise to establish a clear path forward, reducing risk and ensuring the project begins with the right foundation.

Design & Engineering

CleanSpace integrates process architecture and engineering to ensure compliance, performance, and quality from the start. Our team develops coordinated designs that align regulatory requirements, operational needs, and constructability to deliver efficient, high performing controlled environments.

Preconstruction & In-house Products

CleanSpace leads preconstruction with detailed planning, cost alignment, and constructability expertise while integrating our proprietary cleanroom systems. This approach ensures efficient delivery, predictable outcomes, and high performance controlled environments built to meet stringent regulatory and operational requirements.

Construction & Installation

CleanSpace delivers construction through specialized in-house teams experienced in complex technical facilities. Our labor arm ensure precise execution, strict quality control, and full alignment with safety, design, regulatory requirements, and project schedule.

Commissioning Qualifications Validation (CQV)

CleanSpace ensures controlled environments perform as designed through comprehensive commissioning, qualification, and validation. Our team verifies system performance, all regulatory compliance, and operational readiness so facilities are prepared for reliable and compliant operation from day one.

Operational Readiness

Collaboratively prepares facilities and teams for successful start-up and sustained performance. We ensure systems, processes, and personnel are aligned so operations begin smoothly, meet regulatory expectations, and perform reliably from day one.

Capital & Operational Efficiency

Reduce capital and operating costs while minimizing project and operational risk. Through strategic planning, technical expertise, and integrated delivery, we guide decisions that optimize investment, improve long term performance, and protect project outcomes.

Service & Maintenance Program

Our service programs maintain validated systems, testing & balancing, shutdowns, emergency response calls, regulatory compliance, workforce readiness, and operational uptime through ongoing CQV oversight, SOP management, training reinforcement, and audit preparedness.
