

Fish Distributor

**Gentle distribution of fish
in water flow**

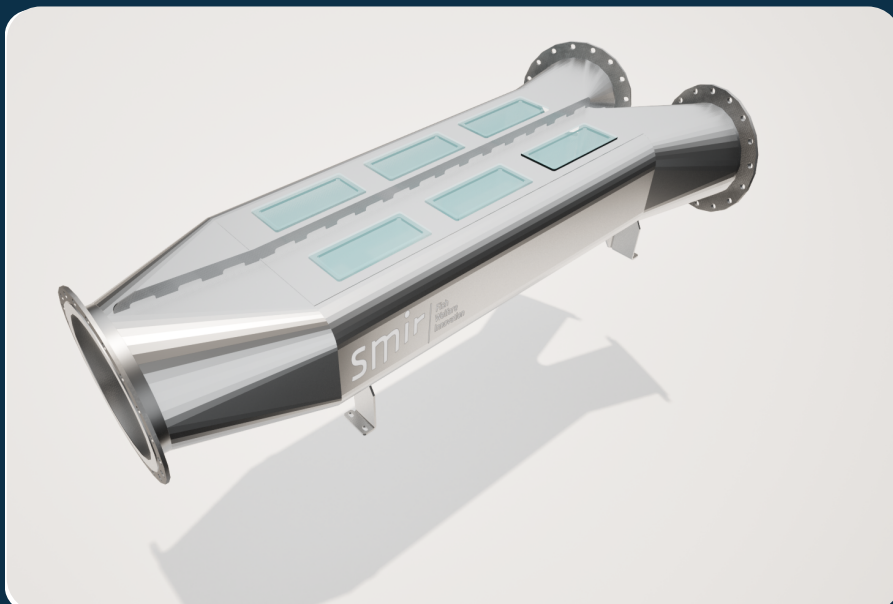

The Fish Distributor from Smir is a well-proven and documented solution for gentle distribution of fish in the water flow. The unit efficiently distributes fish from one large inlet to two smaller outlets while maintaining water volume and flow velocity.

By dividing the fish flow, the system increases operational flexibility in fish handling and can reduce the need for pumps during transport. This contributes to more efficient operations and allows the system to be adapted to a wide range of production setups. The fish distributor is a well-established product in the industry and has been in continuous use since 2017. Designed and optimized for multiple aquaculture applications, it is today integrated into a variety of system solutions for gentle, efficient, and reliable fish handling.

Key advantages

- ✓ Increases operational flexibility in fish handling
- ✓ Reduces the need for pumps during fish transport
- ✓ No moving parts or active control systems
- ✓ Well-proven and documented solution
- ✓ Suitable for multiple aquaculture applications
