Chemigem classic

Take the guesswork out
of managing your pool.

Fully-Automated Water Management System

The award winning **Chemigem Range** of chemical dosing systems is where it all started for Pool Controls. The Chemigem D10 is suitable for domestic pools of all shapes and sizes and gives you total control over sanitizer levels and pH. The Chemigem uses a multi-electrode (probe) to analyse water quality whenever the system is running and adds precise doses of chlorine and acid to maintain optimum water quality.

Precise dosing can be via highly-efficient solenoid valves or peristaltic pumps. Your Chemigem can also be used to control a salt chlorinator if you prefer a saltwater pool and on-site chlorine generation.

Chemigem classic

Fully-Automated Water Management System

The Chemigem D10 Water Management System measures water quality and adds precise doses of chemicals to ensure that your pool is clean and safe to swim in. With a Chemigem, the “hit and miss” methods of dosing by hand are a thing of the past. Pool water chemistry is regulated automatically – providing optimum levels of water sanitation while using less chlorine and acid. ***This means you get a better result – and save money!***

A true freshwater sanitation system that provides an alternative to saltwater pools. Salt can be very corrosive, so if protecting your investment is important to you, a Chemigem D10 may be the best option.

Total control and peace of mind

Whenever your pump is running, your Chemigem is working. The Chemigem tests the water continuously and can add precise doses of chemicals over 30 times each hour if required. The Chemigem measures pH (a measure of the acidity of pool water) and ORP (Oxidation Reduction Potential – a measure of the level of effective chlorine in the water). ***It is important that both pH and ORP are maintained within a safe range.***

Choose a Chemigem to suit your needs

Your pool is as unique as you are – and Pool Controls offers a range of different Chemigems to suit varied applications. Your Chemigem can be programmed to control other pool accessories – such as pool lighting and in-floor cleaning systems and is compatible with heating systems and energy saving pumps. ***Your Chemigem can be used to control either chemical dosing systems (via solenoid valves or peristaltic pumps), or salt water chlorination systems.***
