# SG Series

Water management solutions  
for Salt Pools

**SG** Salt

The **SG Series salt water chlorinators** are fully automated, allowing you to take control of your swimming pool water management. Proudly Australian-made and packed with features, the SG Series is available in three sizes – 10g/hr, 20g/hr and 30g/hr – so there's sure to be a system to suit any size of pool.

## Other features include:

- Reverse-polarity (self-cleaning) electrolytic cell
- Optional additional timed power outlets for pool or garden lighting or pool accessories
- pH Control

**pH** Control

**Over time**, the addition of chlorine has the effect of raising the pH of swimming pool water and if it is not brought back into the desirable range, the chlorine will become steadily less effective. Pool Controls is proud to offer pH Control across its entire range of saltwater chlorinators because we believe every pool should benefit from this important feature.

The **SG Series pH Control System** uses a **sophisticated inbuilt algorithm** developed by Pool Controls to calculate how much acid is required to adjust the pH of the swimming pool water. The pH Control System is simple to install and because it does not rely on a probe, no calibration is required. Once connected, the system recognises the pH Control and activates the pH algorithm. Suitable for use on all types of pool – fibreglass, concrete and vinyl liner.

**NOW HEAT PUMP  
ENABLED**

**SG Series salt chlorinators are covered by a full 3 year Manufacturer's warranty - see our Product Catalogue or visit:**
