*The Power of Ozone*

## Ozone SWC with pH A Fully-integrated System

### Enjoy

- ✓ **Powerful** sanitation provided by ozone
- ✓ **Convenience** of a saltwater chlorinator to provide a safe residual
- ✓ **Optimum** water balance with algorithmic pH control
- ✓ **Suitable** for use in conventional salt or mineral salt pools

*Proudly  
Manufactured in Australia*

## How it works?

**1 Ozone is the frontline of defence** against bacteria and other pathogens in the water. Ozone is a powerful sanitiser and leaves no trace in the pool water after treatment.

**2 The SWC** chlorinator provides a reliable residual disinfectant so that your pool is always clean and safe to swim in. The SWC chlorinator is suitable for use in salt or mineral pools.

**3 pH control enhances the effectiveness** of the sanitiser by maintaining the pH of the water in the correct range. The algorithmic pH doser is incorporated into the unit.

**CONTROLS**

The Ozone SWC is an integrated system presented in a single enclosure, minimising the space required for pool equipment and the need to install multiple components. The combination of a powerful corona-discharge ozonator with a reliable salt water chlorinator plus integrated pH control is truly innovative.

Ozone is generated by a powerful 1g/hr corona-discharge ozonator. This is approximately ten times as powerful as UV-type ozone generators utilised in other systems.

These systems provide a safe residual disinfectant and also automatically regulate the pH of the water. The use of ozone significantly reduces chlorine demand, making day-to-day pool maintenance simple and efficient. Ozone SWC units come in a variety output sizes to suit a wide range of pools – 15g/hr, 25g/hr, 35 g/hr, 45 g/hr and 60g/hr.

## How Ozone Works

- 1 Oxygen converts to Ozone.
- 2 Ozone destroys harmful contaminants and bacteria, resulting in a safer swimming environment.
- 3 Ozone reverts to pure natural oxygen, leaving a cleaner, fresher and gentler pool water sensation.
