

Construction fleet management

Stay on-time and on-budget with Geotab.

Geotab helps businesses take control of their vehicles and equipment.

Construction operations are highly dynamic, with multiple job sites, diverse mobile and stationary assets, and crews on the move. To help you keep track of all your heavy equipment, including yellow iron, powered trailers, and other assets, you can rely on Geotab's GO9 RUGGED asset tracking device. With its IP68 and IP69K ratings, the GO9 RUGGED is perfectly suited for harsh weather, rough construction site working conditions, and external installations.

Vehicle and asset tracking can help you meet today's business challenges, including:

Providing eyes on your vehicles – whether they're dispatched from the office or your workers' homes.

Cutting fuel expenses by reducing idling, improving routing, and monitoring poor driving behaviours.

Optimising routes for managers and workers assigned to multiple job sites; maximising productivity and profits.

The power to monitor yellow iron and other on-site assets after hours – providing better security and piece of mind.

Knowing exactly where all your expensive assets – particularly yellow iron – are located and their status, maximising your investment.

Having cost breakdowns right at your fingertips – what does it cost to own or rent your equipment?

GEOTAB

Geotab, a world leader in capturing vehicle data for businesses like yours, offers an innovative and comprehensive connected vehicle solution for construction vehicles that can adapt to your evolving needs.

Connect your way

Geotab partners with leading light and medium-duty OEMs, such as Ford, GM, Stellantis, and others, to obtain the data you need directly from your vehicles.

The Geotab solution allows you to see all of the assets in your organisation on a single dashboard.

Protect your vehicles and workers

Geotab's best in class safety information will help you to keep your workers and managers safe as they head to job sites with audible in cab alerts, safety benchmarking, and more.

Geotab Marketplace

Unlike out-of-the box, one size fits all solutions, the Geotab solution is customisable and scalable, based on an open-platform designed for integration. With unlimited flexibility, Geotab's solution easily adapts to the needs of each fleet. With Geotab's Marketplace partners, these data insights can be integrated with MyGeotab in a convenient dashboard.

Features include:

Wireless Forms

- An efficient way to streamline processes and keep everything in one place
