

# DIRTY SOLAR PANELS DON'T PRODUCE AS MUCH POWER AS CLEAN SOLAR PANELS

- Did you know that the overall output of solar panels can be greatly improved by routine cleaning?

Most manufacturers state that clean panels can produce upwards of 30% more power than dirty panels.

- Solar panel cleaning is one of the many additional services that we offer.

Due to the angle of solar panels, they are more prone to gathering bird droppings, dirt, dust, and debris. Just like your windows, rain will not clean solar panels.

- We use the proper equipment to clean your solar panels and help them produce as much power as possible.

We use a purified water-fed pole system or traditional mop and squeegee to make sure your solar panels are clean, without the use of pressure washing or harsh chemicals.
