

SINKHOLE PROBLEMS?

Restore peace of mind with soil retention and sinkhole remediation methods that stand the test of time.

UNITED STRUCTURAL SYSTEMS

USS

INVERTED CONE FILTER

Commonly Identified Symptoms

- Sudden, new depressions in the soil
- Deterioration of vegetation near depression
- Fresh cracks in the foundation or walls
- Sticking doors, sticking windows
- Sinking porch, sinking foundation
- Ground cracks in your yard
- Newly tilting fence posts or trees
- A visible hole in the ground

The Inverted Cone Filter (ICF) method utilizes specifically designed geotextile fabric that not only secures materials like gravel, but also allows for natural drainage to occur during sinkhole remediation.

Causes of Typical Sinkholes

- Extreme weather fluctuations
- Water leaks, unmanaged stormwater
- Sewer systems, drainage ditches
- Utilities in known karst area
- Improper grading of the soil

Sinkhole repairs don't have to be scary. In fact, your home can become even stronger than it was when it was built, with sinkhole remediation and foundation pier installation. Call USS to schedule a free assessment of your home and gain peace of mind knowing your foundation is secure.
