

- > Standard Windbox or Pressure Vessel to ASME VIII Div 1
- > Single Air Inlet or Staged Air Option
- > Rapid Vortex Mixing, Short Flame
- > Refractory Lined Combustor
- > Up, Side, Down Fired

Features

- » Sizes up to 70 MW
- » Air Pressure drop 30 to 600 mmwg
- » Air ratio sub-stoichiometric to high excess
- » Turndown 10:1
- » Airflow up to 100,000 kg/h
- » Stable over a wide range of air and fuel ratios
- » 310 SS fuel tips or other alloys as necessary
- » High Alumina brick lined combustor
- » Fittings for Flame Scanners, Pilots & Igniters
- » Long service life

Overview

The GreenBurn® HI burner is a very reliable, stable and robust burner. It can be readily adapted for a variety of roles utilising different gas or liquid fuels, acid gas over a large operating range or other waste streams. Its principle use is on Thermal Oxidisers whereby it excels by providing a strong stable core with high mixing energy to a variety of waste destruction applications.

Tail Gas Incinerators - A premium performance burner for strong stability and mixing energy for improved waste destruction oxidation. A secondary staged air annular inlet can be added to maintain a hot stable support fuel core yet provide all the air for oxidation of the waste streams.

SRU Claus Furnace - The High Intensity burner is an effective Acid Gas burner providing high temperature rapid mixing to control the H_2S / SO_2 ratio with sub-stoichiometric combustion.

HIGH INTENSITY BURNER

- > Standard Windbox or Pressure Vessel to ASME VIII Div 1
- > Single Air Inlet or Staged Air Option
- > Rapid Vortex Mixing, Short Flame
- > Refractory Lined Combustor
- > Up, Side, Down Fired
