Average years of schooling (1940-2015)

April 2022 | EN

Explanation

The visualization shows data (for each country) about the average years of schooling in 1940, 1955, 1970, 1985, 2000 and 2015, the political regime at that time and the percentage of the expenditure on education compared to the total government expenditure on all sectors for each country in 2015. In this way, the 22 analysed countries have been arranged in the graph according to their human rights protection score (Y-Axis) and their corruption perception index score (X-Axis) in 2015.

The 22 selected countries have been chosen (for each continent) amongst the 4 countries with a higher GDP per capita (from those countries with the highest population) in 2015.

Several countries that obtained a high score for these variables have been excluded as there was not enough data about them for the above variables.
