Job Title

Data & Wearables Specialist

Location

Remote

Client

Undisclosed

Job Summary

We are seeking a Data & Wearables Specialist to join our pioneering team. This role is at the intersection of health, technology, and data interpretation. You will play a critical role in integrating wearable health data into our platform, interpreting complex health trends, identifying patterns, and helping predict member well-being based on real-time metrics.

We are looking for someone who understands data science principles but also has a strong foundation in health, wellness, or human performance. Precision meets prediction in this role—you will help transform raw data into proactive, hyper-personalized health insights for our members.

Responsibilities

- Integrate wearable health data (fitness trackers, heart rate monitors, sleep trackers) into our centralized health platform.
- Analyze and interpret health data trends to deliver meaningful, actionable insights.
- Collaborate with our AI-driven health team to develop predictive models for health span optimization.
- Synthesize complex health and biometric data to identify patterns, early risk indicators, and opportunities for intervention.
- Work cross-functionally with our health experts, data engineers, and product teams to enhance our personalized health solutions.
- Ensure accuracy, security, and integrity of all health-related data, in line with Vita Kavana's privacy and security standards.
- Anticipate member health trends based on real-time metrics and contribute to personalized health recommendations.

Qualification

- Proven experience working with wearable health data and biometric devices.
- Strong data analysis skills with the ability to interpret complex health and wellness metrics.
- Background in health, wellness, longevity, human performance, or related fields.
- Experience with AI-driven health insights or predictive analytics is a plus.
- Ability to communicate technical health insights clearly to both technical and non-technical audiences.
- Passion for personalized health, wellness, and improving human potential.
- Self-driven, detail-oriented, and excited to work in an innovative, fast-paced environment.
- Must be based in Latin America.
- Bilingual with advanced English skills (C1 or higher) — strong verbal and written communication required
