Job Title

Full Stack Developer

Location

Remote

Client

Undisclosed

Job Summary

We're seeking a Senior Full-stack Developer with strong experience in React, Next.js, Node.js, and TypeScript to join our engineering team. You're not just full-stack, you're FULL-SEND. You seamlessly jump between Next.js frontends and TypeScript/Bun backends. Likewise, you ship features before product even finishes the spec. Your vim config is a work of art, your Claude suggestions are always on point, and you've memorized every Cursor shortcut. You write code

at 3am because you can't sleep until that feature is live. We need someone who thinks deployment pipelines are too slow and considers 'git push --force' a valid debugging technique.

Responsibilities

- Design, build, and maintain end-to-end web applications using React, Next.js, Node.js, and TypeScript.
- Collaborate with cross-functional teams (Product, Design, QA) to deliver new features and improvements.
- Develop and optimize RESTful and/or GraphQL APIs to support front-end applications.
- Ensure applications are scalable, secure, and performant.
- Write clean, maintainable, and testable code following best practices.
- Contribute to technical decisions regarding architecture, code quality, and process improvements.
- Mentor junior developers and participate in code reviews.

Qualification

- 5+ years of professional experience as a Full-stack Developer.
- Strong proficiency in React, Next.js, Node.js, and TypeScript.
- Solid understanding of frontend performance optimization and responsive design.
- Experience with databases (SQL and/or NoSQL).
- Familiarity with cloud platforms (AWS, GCP, or Azure) and CI/CD pipelines.
- Ability to work in a fast-paced startup environment with high autonomy.
- Excellent communication and problem-solving skills.

Nice to Have

- Experience with testing frameworks (Jest, Cypress, Playwright).
- Knowledge of DevOps practices and containerization (Docker, Kubernetes).
- Background in scaling SaaS products or high-traffic applications.
