

The LNG industry

# GIIGNL Annual Report

2020

# Profile

GIIGNL is a non-profit organisation whose objective is to promote the development of activities related to LNG: purchasing, importing, processing, transportation, handling, regasification and its various uses.

The Group constitutes a forum for exchange of information and experience among its 88 members in order to enhance the safety, reliability, efficiency and sustainability of LNG import activities and in particular the operation of LNG import terminals.

## Acknowledgements

We wish to thank all member companies for their contribution to the report and the following international experts for their comments and suggestions:

- Cybele Henriquez – Cheniere Energy
- Najla Jamoussi – Cheniere Energy
- Callum Bennett – Clarksons
- Laurent Hamou – Elengy
- Jacques Rottenberg – Elengy
- María Ángeles de Vicente – Enagás

- Mika Iseki – Tokyo Gas
- Yohei Hukins – Tokyo Gas
- Donna DeWick – Total
- Emmanuelle Viton – Total
- Xinyi Zhang – Total

# The LNG industry in 2019

**"LNG will continue to be a flexible, safe, reliable and cleaner energy source"**

**Jean-Marie Dauger**  
President

Dear Colleagues,

In 2019, the LNG market grew at a vigorous 13.0% rate, reaching 354.7 MT, an expansion followed by mounting uncertainties since the start of 2020.

In the near term, the disruptive impact of the Covid-19 outbreak on the economies of importing countries will exert downward pressure on LNG demand in an already oversupplied market.

2019 marked an all-time record increase in annual LNG production, driven by new liquefaction trains and ramp-ups in the United States, Russia and Australia. Over the last three years, the industry has added more than 80 MTPA of new capacity and significant volumes are due to come online by 2025. Besides, 2019 was a record year for new investment decisions, which reached 71 MTPA worldwide by the end of the year.

Global LNG flows experienced a shift in patterns: Northeast Asian demand growth moderated due to economic slowdown, milder weather and competition from nuclear and coal-fired power generation, while most of additional LNG volumes were absorbed into Europe which played a balancing role thanks to its abundant infrastructure and well-connected gas market.

On the demand side, no new country joined the ranks of importers in 2019 but several countries made sound progress on infrastructure development and are set to begin importing in the coming years. In Asia, demand was characterized by two diverging trends: on the

one hand, it continued to be boosted by China despite the US-China trade frictions and the slowdown of the coal-to-gas switch in the industrial sector. On the other hand LNG demand declined in Japan and South Korea, where increasing levels of nuclear power generation and the pace of renewables deployment influenced the role of LNG in the power mix. In Europe, the absorption of surplus volumes was enabled by a combination of lower pipeline imports, declining domestic production, increased storage use and additional gas-fired power generation. Imports dwindled in the Middle East as Egypt increased its exports. The same dynamic occurred in South America as Argentina started LNG production and exports.

For LNG sellers and buyers, business models and contractual arrangements are becoming increasingly diversified. Traders continue to take advantage of seasonal and local supply tensions and integrated portfolio players are displaying impressive growth, aiming to bridge the disconnect between LNG seller and buyer interests. We see competing interests, a world in which sellers require long-term commitments to support their investments, whereas buyers need shorter contract durations, diversified pricing structures, increased destination flexibility and greater volume flexibility in order to manage demand uncertainty.

Looking further ahead, LNG will continue to be a flexible, safe, reliable and cleaner energy source to meet ever more flexible and climate-conscious demand. To allow natural gas to penetrate new markets, prices

need to remain at levels that make gas competitive with alternative fuels in downstream power and gas markets but, at the same time, support the significant investments needed in production, liquefaction, transportation, transmission and downstream infrastructure. A balance will have to be found, and in the end, the scale of new developments will depend on the industry's competitiveness, as well as on its ability to demonstrate its environmental benefits, in particular by increasing efforts to detect, measure and reduce methane emissions. Natural gas's effective contribution in quickly improving air quality and curbing carbon emissions should be key in positioning LNG as an enduring part of the energy mix and as a pragmatic and lower-carbon solution for the future, while new gases will begin to take advantage of the versatility of LNG infrastructure.

In 2019, LNG commercial operations passed the mark of 100,000 delivered cargoes without major incident, showing an incredible track-record of safety. As we enter a new decade and as GIIGNL is approaching its 50<sup>th</sup> anniversary, our association remains committed to promoting cooperation between LNG players and to supporting the development of safe, efficient and sustainable LNG imports for a responsible energy transition.

Yours sincerely,

**Jean-Marie Dauger**  
President

# LNG trade in 2019

In 2019, global LNG imports reached **354.7 million tons (MT)**, increasing by 40.9 MT or **13.0%** compared to the previous year, the strongest growth rate since 2010.

Argentina exported its first LNG cargo from the Tango FLNG small-scale facility in June 2019, increasing the number of exporting countries to 21\*.

The number of importing countries remained unchanged, at 42\*\*.

## Strongest LNG supply growth since 2010 thanks to the Atlantic Basin

As in 2018, new LNG supply volumes were mostly driven by new production from the United States (+13.1 MT), Russia (+11 MT) and Australia (+8.7 MT). Most exporting countries experienced an increase in their supply exports, except for three countries: Indonesia (-2.7 MT), Equatorial Guinea (-0.7 MT) due to feed gas issues and Norway (-0.5 MT) due to maintenance requirements.

5 new large-scale liquefaction projects started commercial operations in 2019: 4 onshore in the United States (Cameron LNG Train 1, Corpus Christi LNG, Freeport LNG Train 1 and Elba Island) and 1 FLNG in Australia (Prelude FLNG). In addition, 2 small-scale liquefaction plants started-up exports: 1 onshore in Russia (Vysotsk LNG) and 1 floating unit in Argentina (Tango FLNG).

The Pacific Basin remains the largest source of LNG supplies to the global market with 146.7 MT or 41.3% of the total global market, followed by the Atlantic Basin (32.2%) and the Middle East (26.5%). Due to the increase in production from Australia, the gap between supply from the Pacific Basin and the Middle East has widened, from 45 MT in 2018 to almost 53 MT in 2019.

The Atlantic Basin was the region contributing the most to incremental volumes (+30 MT or almost three quarters of new volumes). With 114.2 MT, the Atlantic Basin is now the second largest source of LNG supply ahead of the Middle East (93.9 MT).

## Europe absorbs most of the LNG oversupply

In 2019, Asia continued to be the leading importing region with a 69% share of global LNG imports, down from 76% in 2018. Asian LNG imports grew

by 3.2% in 2019 to 246.2 MT, rising in all countries except in the established importing countries of Japan, South Korea and Taiwan. Even though Japanese LNG imports declined by 6.8% in 2019 compared to 2018, Japan remains the leading importing country with 76.9 MT or a 21.7% market share. The main reasons for declining LNG imports in Japan were a slowdown of economic growth, the restart of several nuclear power units and mild temperatures. Like Japan, South Korea also experienced a decline in LNG imports, from 44 MT in 2019 to 40.1 MT, remaining the third largest LNG importer in the world and accounting for 11.3% of global market share. The main reasons for the decline were better nuclear generation performance, mild weather and high inventories at the beginning of the year.

In 2019, China experienced continued growth of LNG imports, although at a slower pace (+14% compared with +38% in 2018) but the country remains the second largest LNG importer globally, with 61.7 MT or a 17.4% market share (similar to the market share of 2018). In China, the main reasons for the slowdown of year-on-year growth of LNG imports were the moderating economic growth rate, general easing of coal-to-gas switching efforts, acceleration of domestic production, as well as the rising share of renewables.

In other Asian countries, LNG consumption continued to grow strongly: in Bangladesh, imports grew by more than 500% thanks to the start-up of a second FSRU, from 0.7 MT in 2018 to 4.1 MT in 2019. Imports also increased by 1.3 MT in Malaysia (+93.8%), +1.2 MT in Pakistan (+18.1%), + 0.7 MT in Singapore (+28.7%). In India, where the lack of downstream infrastructure remained a constraint, a 7% year-on-year growth of LNG imports was nevertheless recorded.

2019 was a record year for Europe, which experienced a growth in net LNG imports of 75.6% com-

of US volumes delivered to Europe,  
37% to Asia, 21% to Americas.

**+ 14%**

increase in Chinese LNG imports,  
compared with + 38% in 2018.

**34%**

of volumes imported on  
a spot or short-term basis.

\* including Yemen whose exports have been halted since 2015 due to the political unrest.

\*\* Gibraltar started receiving LNG in 2019 but the territory was not added to the number of importing countries due to its specific status. Russia inaugurated a FSRU in Kaliningrad but it had not been importing yet at the time of this writing.

pared to 2018, reaching 85.9 MT or an increase of 37.0 MT. All LNG importing countries in Europe increased their LNG imports, the three largest importers being Spain (15.7 MT), followed by France (15.6 MT) and the United Kingdom (13.6 MT). The increase of volumes imported into Europe represented over 90% (37 MT) of the global increase in LNG imports, with the region acting as a balancing market for the oversupplied global market. Europe was able to absorb these new additional volumes thanks to its ability to inject gas in underground gas storages and as a result of continued coal-to-gas switch in power generation.

Imports into the American region decreased by 8.6% (1.5 MT), the total of LNG imports in 2019 reaching 15.7 MT, down from 17.2 MT in 2018. With 4.9 MT imported, Mexico remained the largest LNG importer in the American region, accounting for a total market share of 31%, followed by Chile (2.5 MT or 15.6%). Argentina experienced the largest decline in the region (-1.4 MT) because of the increase in domestic gas production.

LNG imports into the Middle East decreased again in 2019, with deliveries falling by 23.9% (-2.2 MT). Jordan experienced a decline by almost half (-1.1 MT). In Egypt, the ramp-up of new production has allowed for a complete reduction of LNG imports.

### Spot and Short-term share stable in a fast growing market

In 2019, LNG continued to commoditize but the share of spot and short-term volumes increased at a slower rate than in 2018 due to the start of several long-term contracts from the United States and Australia. Spot and short-term volumes increased by 19.7 MT (+19.8%), reaching 119 MT or 34% of total trade compared with 32% (99.3 MT) in 2018. Similarly to 2018, this expansion was mainly supported by the ramp-up of flexible volumes from the United States and from Australia and by the rise of LNG volumes handled by traders and portfolio players, who are seeking to optimize their portfolios and to manage volume risk by purchasing and selling LNG under more flexible conditions.

The United States has become the number one exporter of flexible LNG, accounting for 20% of the spot and short-term volumes, followed by Australia with a 16.7% market share. Despite supplying 77.8 MT to the global market, Qatar's share of the spot and short-term market has declined to 5% from 11.7% in 2018 and 19.7% in 2017.

"True" spot volumes (i.e. volumes delivered within three months from the transaction date) reached 27% of total imports in 2019 or 95 MT, compared with 25% of total imports in 2018.

Due to the convergence of European and Asian prices, arbitrage opportunities were more scarce in 2019. As a result re-exports have sharply decreased to 1.6 MT in 2019 compared to 3.8 MT in 2018. In 2019, 12 countries re-exported LNG and 20 countries received re-exported volumes. Europe accounted for 58% of the re-exported volumes (0.91 MT). As in 2017 and 2018, France retained the largest market share (39% or 0.61 MT) followed by Singapore (26% or 0.41 MT).

of Russian volumes delivered to Europe, 46% to Asia, 2% to the Middle East.

27%  
of volumes imported on a spot basis.

# LNG shipping

**601**  
vessels at the  
end of 2019

The total LNG tanker fleet consisted of **601 vessels** at the end of 2019. It included **37 FSRUs**. **46 vessels** had a capacity of less than 50,000 cubic meters. Total cargo capacity at the end of 2019 stood at 89.7 million cubic meters. Total operational capacity (vessels known to be in service) amounted to 86.1 million cubic meters.

In 2019, the average spot charter rate for a 160,000 cubic meters LNG carrier stood at \$69,337/day, compared to an average \$88,692/day in 2018.

A total of **44 vessels were delivered** into the fleet in 2019 while 62 units were ordered, including 10 vessels of less than 50,000 cubic meters, compared with 77 new orders placed in 2018. The orderbook consisted of 152 units of 22.6 million cubic meters including 7 FSRUs at the end of 2019. The orderbook represented 25% of the existing LNG carrier fleet. 53 of the vessels on order were scheduled for delivery in 2020.

## LNG CARRIERS SCRAPPED IN 2019

2 ships were demolished during the year:

Built	Vessel Name	IMO Number	Type	Capacity (m³)	CCS*	Owner	Builder	Manager
1977	Sunrise	7359670	LNG Carrier	129,299	Membrane	Dian Kemala	Ch. de France	Dian Kemala
1980	Mourato	7400704	LNG Carrier	126,130	Membrane	Unknown	Ch. de l'Atlantique	Hyproc Shipping Co.

## LNG CARRIERS LAID-UP, IDLE OR OTHERWISE OUT OF SERVICE AT THE END OF 2019

29 vessels were laid-up, idle or otherwise out of service at the end of the year. In addition, 2 vessels were idle, awaiting conversion:

Built	Vessel Name	IMO Number	Type	Capacity (m³)	CCS*	Owner	Builder	Manager
1981	Lucky FSU (ex Tenaga Dua)	7428469	LNG Carrier	130,000	Membrane	Dalian Inteh Group	Ch. de France	Dalian Inteh Group
1981	Fortune FSU (ex Tenaga Tiga)	7428471	LNG Carrier	130,000	Membrane	Dalian Inteh Group	Ch. de France	Dalian Inteh Group

## LNG CARRIERS DELIVERED IN 2019

44 ships were delivered during the year, including 4 FSRUs and 2 ships of less than 50,000 cubic meters. The average capacity of vessels delivered (excluding FSRUs and ships of less than 50,000 cubic meters) amounted to 173,827 cubic meters.

# Major LNG flows in 2019

# Liquefaction plants

In 2019, global liquefaction capacity increased by **21 MTPA** to reach a total nameplate capacity of around **427 MTPA** at year-end.

5 new large-scale liquefaction projects started commercial operations in 2019: 4 onshore in the United States (Cameron LNG Train 1, the first two trains at Corpus Christi LNG, Freeport LNG Train 1 and the first two trains at Elba Island) and 1 offshore in Australia (Prelude FLNG). In addition, 2 small-scale liquefaction plants started-up exports: 1 onshore in Russia (Vysotsk LNG) and 1 floating unit in Argentina (Tango FLNG).

2019 was a record year in terms of Final Investment Decision (FID) in liquefaction projects. Six FIDs were taken during the year: Calcasieu Pass (10 MTPA), Golden Pass (15.6 MTPA) and Sabine Pass Train 6 (4.5 MTPA) in the U.S., Mozambique LNG (12.9 MTPA) in Mozambique, Arctic LNG-2 (19.8 MTPA) in Russia and NLNG Train 7 (7.6 MTPA including the debottlenecking of existing facilities) in Nigeria, are expected to add almost **71 MTPA** of liquefaction capacity by the mid-2020s.

At the end of the year, approximately 123 MTPA of new liquefaction capacity was under construction including the projects sanctioned in 2019. 54% of the capacity under construction was located in North America. The U.S. will continue to drive the capacity increase, with around 18 MTPA of new capacity expected to come online in 2020.

## Argentina

In June, Exmar completed the commissioning of **Tango FLNG** (0.5 MTPA), former *Caribbean FLNG*, redeployed to the Port of Bahía Blanca. Argentina has joined the LNG exporting countries' club, with an initial plan to export 0.5 MTPA of LNG sourced from Vaca Muerta shale gas produced in the Neuquén Basin.

## Australia

In 2020, Australia is expected to surpass Qatar as the world's largest LNG exporting country on an annual basis as newly commissioned projects in Australia ramp up production.

In June, the first shipment of LNG departed from Shell's **Prelude FLNG** facility (3.6 MTPA) located 475 km North East of Broome in Western Australia.

## Cameroon

**Kribi FLNG** started operations in 2018 and produced 1.2 MT of LNG in 2019 from two out of the four liquefaction trains installed in the vessel. Golar LNG, the operator, has discussed with Perenco and Société Nationale des Hydrocarbures the utilization of the remaining two trains to increase output to 2.4 MTPA.

## Canada

Pieridae Energy, the developer of **Goldboro LNG** project closed the acquisition of all of Shell's midstream and upstream assets in the southern Alberta Foothills in October. This transaction will help the company secure the natural gas supply needed for the first train of the Goldboro LNG project.

In July, **Woodfibre LNG** was granted a permit from the BC Oil and Gas Commission, allowing the start of construction. The project signed a binding SPA with BP for the delivery of 0.75 MTPA of LNG over 15 years with first delivery expected in 2023. It involves the construction and operation of an LNG export facility, with a storage capacity of 250,000 m<sup>3</sup> and production capacity of approximately 2.1 MTPA of LNG.

In December, the Canada Energy Regulator approved an application from Chevron, the developer of **Kitimat LNG** to export LNG for a term of 40 years. Chevron has since revealed plans to sell its 50 percent share in the project.

## Egypt

Egypt increased LNG exports from the **Idku** liquefaction plant to 3.45 MT in 2019 compared to 1.44 MT in 2018. Idku has two trains each with a nameplate liquefaction capacity of 3.6 MTPA of LNG.

In February 2020, Eni signed a series of agreements with the Arab Republic of Egypt, the Egyptian General Petroleum Corporation, the Egyptian Natural Gas Holding Company and Naturgy for the restart of the **Damietta** liquefaction plant by June 2020, which has been idle since November 2012.

## Indonesia

In July, SKK Migas, the Indonesian upstream oil and gas regulator, reported that start-up of **Tangguh LNG** Train 3 will be delayed by one year from its initial target of the third quarter of 2020 to the third quarter of 2021. Train 3 is expected to add a production capacity of 3.8 MTPA of LNG, bringing the total capacity of Tangguh to 11.4 MTPA.

In July, INPEX and Shell received official approval from Indonesian government authorities for the revised development plan of the **Abadi LNG** project with an onshore liquefaction plant. This approval followed the signing of an amendment to the PSC including a 7 year additional time allocation and a 20 year extension for the project. The project is expected to have a capacity of 9.5 MTPA of LNG with start-up around 2028.

## Malaysia

In May, PETRONAS started LNG production from its **PFLNG Satu** at the Kebabangan cluster field, 90 km offshore Sabah. Operated by Kebabangan Petroleum Operating Company, Kebabangan field is the second location for **PFLNG Satu** after its initial operation in the Kanowit field, offshore Sarawak.

**PFLNG Dua** was delivered to PETRONAS from the EPCIC consortium of the floating LNG facility. **PFLNG Dua** will be moored over the Rotan Gas Field located 140 km offshore Kota Kinabalu, Sabah, with the capacity to produce 1.5 MTPA of LNG. The first cargo is expected to be delivered in the 2<sup>nd</sup> half of 2020.

## Mauritania/Senegal

In February, Golar LNG signed a lease and operating agreement with BP for chartering an FLNG unit for the **Greater Tortue Ahmeyim** project located offshore Mauritania and Senegal. The facility is expected to start producing approximately 2.5 MTPA of LNG in 2022.

## Mexico

In March 2019, **Energía Costa Azul** LNG project received two authorizations from the U.S. Department of Energy (DOE) to export U.S. produced natural gas

to Mexico and to re-export LNG to countries that do not have a free-trade agreement with the U.S. for its Phase 1 and Phase 2 liquefaction projects. Phase 1 of the project includes a single train LNG facility to be located adjacent to the existing LNG receiving terminal, which is expected to utilize the existing storage tanks, marine berth and associated facilities. Three HOAs for the supply of LNG were signed with Mitsui, Tokyo Gas and Total for 0.8 MTPA for 20 years each. FID is expected in the first quarter of 2020.

### Mozambique

In January 2020, Eni and the Area 4 partners announced the launch of the hull of the **Coral Sul** Floating Liquefied Natural Gas (FLNG). The FLNG is part of the Coral South project that will put into production 450 billion cubic meters of gas of the Coral reservoir, offshore Mozambique. With a liquefaction capacity of 3.4 MTPA, the project was estimated to be over 60% complete and on track for production to start in 2022.

Anadarko and its partners of Offshore Area 1 in Mozambique reached the FID on **Mozambique LNG** project in June. The project consists of two trains with a total nameplate capacity of 12.88 MTPA and gas supply from the Golfinho/Atum fields located in Offshore Area 1. In Sep-

tember, Total closed the acquisition of Anadarko's 26.5% operated interest in the project and said that the company is planning to add two more trains. Mitsui 20%, ENH 15%, ONGC 10%, Bharat PetroResources 10%, PTTEP 8.5% and Oil India 10% are the other shareholders.

In October, the **Rovuma LNG** project led by ExxonMobil and Eni awarded an EPC contract to a consortium of JGC Corporation, Fluor and TechnipFMC. The project includes the construction of two liquefaction trains with a total nameplate capacity of 15.2 MTPA of LNG as well as associated onshore facilities. FID for Rovuma LNG is expected in 2020.

### Nigeria

In December 2019, **Nigeria LNG** (NLNG) took FID for its Train 7 project and the debottlenecking of existing facilities, which will increase the capacity of NLNG's plant from the existing 22 MTPA to around 30 MTPA. The construction period will be approximately five years with first LNG expected in 2024.

### Oman

In September 2019, **Oman LNG** kicked-off the debottlenecking of the plant, which is expected to boost the nameplate capacity from 10.4 MTPA to 11.4 MTPA. The process is expected to be completed by 2021.

### Papua New Guinea

In April 2019, Total, ExxonMobil and Oil Search signed a Gas Agreement with the Independent State of Papua New Guinea defining the fiscal framework for the **Papua LNG** Project, which will consist of two LNG trains of 2.7 MTPA capacity each. This agreement allows the partners to enter the FEED phase of study. The gas production will be operated by Total and the LNG plant will be developed in synergy with ExxonMobil-operated PNG LNG project through an expansion of the existing plant in Caution Bay.

### Qatar

In November, Qatar Petroleum (QP) announced that it aims to increase Qatar's LNG production capacity to 126 MTPA by 2027, representing an increase of 64% from the current 77 MTPA.

### Russia

At the end of March 2020, the commissioning of **Yamal LNG** Train 4 was scheduled to start up in Q3 2020. In April 2019, **Vysotsk LNG** commenced its production. It is a small-scale LNG project with a liquefaction capacity of 0.66 MTPA located in Russia's Baltic Sea port of Vysotsk. The project includes a 42,000 m<sup>3</sup> LNG storage tank and an offloading berth for LNG carriers with a capacity of up to 30,000 m<sup>3</sup>.

FID for the **Arctic LNG-2** project was taken in September. It consists of the development of the Utrenneye field and the construction of a liquefaction plant on the Gydan Peninsula in the Russian Arctic region. The Project participants are NOVATEK (60%), Total (10%), CNPC (10%), CNOOC Limited (10%) and the Japan Arctic LNG consortium of Mitsui & Co and JOGMEC (10%). The LNG plant will consist of three trains with overall production capacity of 19.8 MTPA. The launch of Train 1 is scheduled for 2023, with Train 2 and 3 to be launched in 2024 and 2026, respectively. A consortium of TechnipFMC, Saipem and NIPIGAS was awarded the contract on engineering, procurement and construction for the LNG plant, with the design and construction of gravity-based structures by Russian company SAREN, a joint venture of RHI Russia and Saipem.

## USA

### In 2019, the U.S. added 16 MTPA of liquefaction capacity from four projects.

Trains 1 and 2 at the Corpus Christi LNG terminal are complete and in operation. Train 1 achieved substantial completion in February and Train 2 achieved substantial completion in August 2019. Train 3 is expected to achieve substantial completion in the first half of 2021.

Each train is capable of liquefying 4.5 MTPA of LNG. In August 2019, the first train at the **Cameron LNG** project began commercial operations in Hackberry, Louisiana. Phase 1 of the project includes three liquefaction trains with a nameplate capacity of 13.5 MTPA of LNG. First LNG from train 2 was produced in December 2019 and commercial operations began in March 2020. Train 3 is currently under construction and anticipated to begin production in Q2 2020 and commercial operations in Q3 2020.

In 2019, the **Elba Island** Liquefaction terminal began commissioning ten LNG liquefaction trains and, in December 2019, the terminal loaded the first LNG vessel. Fully developed, the liquefaction facility is expected to have a total capacity of approximately 2.5 MTPA of LNG.

In December, **Freeport LNG** started the commercial operations for its first liquefaction train. Train 2 has also begun its commercial operations in January 2020. Train 3 of the Freeport LNG plant is expected to start commercial operations by Q2 2020. Freeport LNG's three trains are expected to produce over 15 MTPA.

### Three FIDs were taken in the U.S. during the year:

Trains 1 through 5 at the **Sabine Pass** Liquefaction facility are complete and in operation. In June 2019,

Cheniere took FID on Train 6 of the project in Cameron Parish, Louisiana. The company has issued full notice to proceed with construction to Bechtel. Train 6 will have a liquefaction capacity of 4.5 MTPA of LNG and is expected to achieve substantial completion in the first half of 2023.

In February 2019, Qatar Petroleum and ExxonMobil took the FID on the **Golden Pass** LNG export project, located in Sabine Pass, Texas. The project is owned by Golden Pass Products, a joint venture between affiliates of Qatar Petroleum (70%) and ExxonMobil (30%). The plant will have a liquefaction capacity of about 15.6 MTPA and the project's EPC contract was awarded to a consortium comprising Chiyoda, McDermott and Zachry.

In August 2019, Venture Global LNG announced the FID for its **Calcasieu Pass LNG** facility and associated TransCameron pipeline in Cameron Parish, Louisiana. Full-site construction has been underway since February 2019, and the project, which has a capacity of 10 MTPA, is expected to reach commercial operations in 2022.

Several other projects have been approved by FERC and are aiming to take FID in the near future, for a total capacity of 158 MTPA as of March 2020.

# Regasification terminals

In 2019, global active regasification capacity reached **920 MTPA** at year-end.

**42\*** countries imported LNG in 2019. Seven new terminals were commissioned, adding a combined 13 MTPA of new regasification capacity. Two terminals are based on a floating solution and four are small-scale facilities with a regasification capacity of less than 1 MTPA.

Three expansion programs were completed in India, Taiwan and Thailand, adding 5 MTPA of LNG regasification capacity.

At the end of the year, 8 new floating terminals and 18 new onshore terminals were reported to be under construction. Total regasification capacity under construction at year end reached 131 MTPA. 63% of the capacity under construction was located in Asia, of which nearly half in China and India.

## Australia

In June, AGL selected *Höegh Esperanza* as the FSRU for the **Crib Point** project in Victoria, Australia. *Höegh Esperanza* has both a closed loop and an open loop system. It is currently chartered by CNOOC in Tianjin until June 2021.

The New South Wales government awarded planning approval for Australian Industrial Energy (AIE) to construct an LNG receiving terminal at **Port Kembla**. The project will include an FSRU, wharf infrastructure and a pipeline to connect to the existing gas network nearby. AIE selected *Höegh LNG* as the FSRU provider for the project and *Höegh Galleon* is planned to move to Port Kembla.

## Bahrain

In January 2020, **Bahrain LNG** announced that it had completed the mechanical construction and commissioning of the LNG receiving terminal located at the port of Hidd in the Kingdom of Bahrain. The terminal comprises a floating storage unit (FSU) with a storage capacity of 174,000 m<sup>3</sup>, an offshore LNG receiving jetty and breakwater, an adjacent offshore regasification platform with a regasification capacity of 6.1 MTPA, subsea gas pipelines from the platform to shore, an onshore gas receiving facility, and an onshore nitrogen production facility. The commercial operations are expected to start-up in 2020.

## Bangladesh

**Summit LNG**, Bangladesh's second LNG import terminal located offshore Moheshkhali Island began its operations in late April 2019. Excelerate's FSRU *Summit LNG* (formerly FSRU *Excelerate* previously moored in Abu Dhabi), was utilized for the project, with a regasification capacity of 3.8 MTPA.

The government of Bangladesh is planning an onshore terminal that could handle 7.5 MTPA of LNG at **Matarbari** in the Cox's Bazar district of southern Bangladesh. The process for selecting companies to build the facility under a 20-year build-own-operate-transfer basis will be conducted in 2020.

In October, ACWA Power announced the signing of a MOU with the Bangladesh Power Development Board (BPDB) for a LNG-based power plant and terminal in Bangladesh. As part of the agreement, ACWA Power will target the development of a 3,600 MW gas-fired independent power plant as well as a regasification terminal located in **Moheshkhali**, or an alternative location.

## Belgium

Since December 2019, the 5<sup>th</sup> storage tank has been fully operational at the **Zeebrugge** LNG terminal. With a capacity of 180,000 m<sup>3</sup>, it marks the start of the long-term contract for transhipment services between Fluxys LNG and Yamal LNG. In September, Qatar Petroleum and Fluxys signed a long-term LNG Services Agreement for the Zeebrugge LNG terminal. Under the agreement, Qatar Terminal, a subsidiary of Qatar Petroleum, subscribed unloading slots at the facility from the expiry of the current contracts until 2044.

## Benin

Total, the Republic of Benin and the Société Béninoise d'Energie Electrique have signed the Gas Supply Agreement and the Host Government Agreement for the development of an LNG import terminal and the supply of up to 0.5 MTPA of LNG to Benin for 15 years, starting in 2021. Total will develop and operate the regasification infrastructure that will comprise an FSRU located offshore and an offshore pipeline connected to power plants in **Maria Gléta**.

## Brazil

*Golar Nanook*, a FSRU with a storage capacity of 170,000 m<sup>3</sup> reached the site of the **Porto de Sergipe I** Gas-to-Power project in March 2019 following a 25-year charter agreement with power company CELSE. Commercial operations of the 1,500 MW Sergipe power station are expected to commence in the 1<sup>st</sup> half of 2020. In December, BW LNG completed modification works on the FSRU *BW Magna* before starting a 23-year charter for the **Gas Natural Açu (GNA)** Gas-to-Power project in Brazil. The vessel with a storage capacity of 173,400 m<sup>3</sup> reached Port Açu in February 2020. The GNA I power station is expected to begin operations in 2021, and GNA II, in 2023.

## Chile

Ameris Capital AGF Fund acquired Codelco's stake in **GNL Mejillones**. A truck-loading facility has been available at the terminal since December 2019. Ship reloading facilities are under construction at the **GNL Quintero** terminal and the service is expected to be available as of the 2<sup>nd</sup> quarter of 2020.

## China

Two new regasification terminals started commercial operations in 2019. In January 2019, **Fangchenggang** LNG started up with a nameplate regasification

\* Gibraltar started receiving LNG in 2019 but the territory was not added to the number of importing countries due to its specific status. Russia inaugurated a FSRU in Kaliningrad but it had not been importing yet at the time of this writing.

capacity of 0.6 MTPA of LNG and **Shenzhen Gas** terminal (capacity 0.8 MTPA) received its first commercial LNG cargo in August.

In November, *Höegh Esperanza* returned to FSRU mode at the Tianjin LNG terminal. *Höegh Esperanza* is in the 2<sup>nd</sup> year of a three-plus-one year FSRU/LNG carrier time charter with CNOOC Gas & Power Trading and Marketing.

**Zhoushan LNG** terminal is being expanded, with two more storage tanks to be delivered by 2021 to increase the receiving capacity from 3 to 5 MTPA. The temporary permission for truck distribution through the bridge connecting Zhoushan island to the mainland started from July 31, 2019.

Expansion programs in other existing terminals are ongoing in Caofeidian, Ningbo, Putian, Qidong, Qingdao and Rudong terminals. These expansions are expected to add more than 15 MTPA of regasification capacity by 2021.

## Colombia

In September, SPEC LNG, Calamari, Avenir LNG and Höegh LNG announced a Joint Development Agreement to offer additional LNG services from SPEC LNG, Colombia's LNG import terminal in **Cartagena** based on Höegh LNG's FSRU *Höegh Grace*. The additional services include cool-down of conventional LNG carriers and re-loading of small LNG cargoes for onward distribution throughout Latin America and the Caribbean.

## Croatia

In July, the European Commission has approved support for a Croatian LNG terminal at **Krk island**. The measures will support the construction and operation of an LNG receiving terminal, consisting of an FSRU and the connections to the national gas transmission network. The LNG terminal is designed to deliver up to 2 MTPA of natural gas into Croatia's national transmission network from 2021.

## Cyprus

In August, a consortium led by the China Petroleum Pipeline Engineering Corporation, Wilhelmsen Ship Management, Aktor, Metron, and Hudong-Zhonghua Shipbuilding, was selected as the preferred bidder for the construction of an LNG terminal at **Vassiliko Port** in Cyprus. The terminal will include an FSRU, a jetty and onshore pipelines as well as additional facilities. The project is scheduled to be completed in 2021.

## Dominican Republic

In October, AES awarded the engineering contract for the first phase of the expansion of its **Andres LNG**

terminal in Santo Domingo. The project consists of a second LNG storage tank, additional vaporization facilities and the addition of 2 truck-loading bays.

## El Salvador

In December, Energía del Pacífico (EDP) completed the project financing for the LNG-to-power project under construction at the **Port of Acajutla**, which consists of a 378 MW natural gas-fired power plant, an FSRU, and an approximately 44 km electric transmission line. The project is expected to be operational in 2021. EDP has signed a contract with Shell for the supply of LNG.

## Equatorial Guinea

The first LNG receiving facility was inaugurated at the Port of **Akonikien** in August. The facility is being built with a storage capacity of 14,000 m<sup>3</sup> in 12 bullet tanks, which allows LNG to be distributed on the mainland. A truck-loading station and 12 km of gas pipeline are also being installed.

## France

In **Dunkerque**, the works on the LNG truck-loading bay have been completed and the commercial operations are now planned to start in the 1<sup>st</sup> half of 2020. This supports the agreement between Total Marine Fuels Global Solution and Brittany Ferries to supply LNG for the first French LNG-powered cruise ferry, the Honfleur. Works to adapt the existing jetty, which can accommodate vessels from 65,000 m<sup>3</sup> to Qmax vessels, to be able to receive small LNG vessels from 5,000 m<sup>3</sup> are ongoing. Completion of these works is planned in 2020. Dunkerque LNG is studying potential extensions including a 2<sup>nd</sup> jetty for transshipment, a 3<sup>rd</sup> jetty for small-scale vessels and a 2<sup>nd</sup> truck-loading bay.

Since September, **Fos Cavaou** LNG terminal can accommodate small-scale vessels with a capacity down to 5,000 m<sup>3</sup>, allowing those vessels to offer LNG bunkering in the port of Marseille-Fos or to deliver LNG to neighboring French and foreign Mediterranean ports. A new truck-loading facility was commissioned in October 2019 with a capacity of approximately 40 truck-loadings per day. Fosmax LNG is considering expanding the capacity of the facility, which would involve the construction of one or two additional storage tanks and one additional jetty. This would allow doubling the receiving capacity to 13 MTPA and an improvement of services such as transshipment and reloading of small-scale LNG carriers. FID will be made on the basis of a market consultation. In February 2020, Total completed the sale of its interest in Fosmax LNG to LNG terminal operator Elengy.

At **Fos Tonkin**, the truck-loading capacity increased from 20 to 34 trucks per day thanks to a second loading bay. Following a call for subscription conducted in 2019, Elengy has announced in January 2020 that the proposed regasification capacity has been entirely booked until 2028.

In **Montoir-de-Bretagne**, Elengy also conducted an Open Subscription Period (OSP) from July to November 2019, which consisted of offering the regasification capacity that had not been subscribed yet. As a result of this commercial operation, the terminal is now fully booked up to 2035. Elengy is considering expanding above its current level as well as beyond 2035.

## Germany

In September, German LNG Terminal, the joint venture of Vopak, Oiltanking and Gasunie completed the EPC pre-qualification process to construct an onshore LNG import terminal in **Brunsbüttel** in Northern Germany, with subsequent EPC contract award planned before the end of April 2020. The permit request will include two tanks of 240,000 m<sup>3</sup> as well as a jetty for vessels and barges of up to 265,000 m<sup>3</sup>. Some of the milestone decisions leading up to the FID will be taken in early 2020. Commercial operations will start following a construction phase that will take up to three years. The development of the first offshore German LNG regasification terminal in **Wilhelmshaven** also progressed during the year. Mitsui OSK Lines and Uniper signed an MoU to seal a cooperation to design and operate the FSRU. Alongside regasification and injection into the transmission grid, the FSRU will offer the possibility of loading LNG onto bunker barges or tank trucks for road transport. The FSRU has a planned send-out capacity of 7.3 MTPA and an LNG storage capacity of around 263,000 m<sup>3</sup>. In January 2019, Uniper entered into a HOA with ExxonMobil to book a share of regasification capacity long-term.

## Ghana

Based on an FRU and FSU, the **Tema LNG** project developed by Helios Investment Partners applied for financing by the African Development Bank in April 2019.

## Gibraltar

In May, Shell announced the opening of a new regasification terminal in **Gibraltar** that was completed by Shell and Gasnor, a 100% Shell-owned subsidiary. As a result, Gibraltar has switched from diesel-fuelled power generation to cleaner-burning natural gas, using a newly commissioned 80 MW gas-fired power plant. LNG will be stored in five double-walled stainless-steel tanks, each able to hold 1,000 m<sup>3</sup> of LNG.

### Greece

According to DESFA's 10-year Development Plan, LNG truck-loading and bunkering infrastructure is expected to be ready in 2022 and 2024 respectively at the **Revithoussa** terminal.

DEPA acquired a 20% stake in Gastrade, the company developing an FSRU project in **Alexandroupolis** in Northern Greece. The FSRU will have a storage capacity of up to 170,000 m<sup>3</sup> and a send-out capacity of 5 MTPA of LNG. It is a project of common interest (PCI), i.e a priority project of the European Union. In January 2019, Bulgartransgaz bought a 20% share in Gastrade.

### Hong Kong

In June, MOL entered into a long-term contract with **Hong Kong LNG** Terminal Ltd. to supply an FSRU, jetty operation & maintenance services and port services. MOL will utilize the *MOL FSRU Challenger* which has a storage capacity of 263,000 m<sup>3</sup> and is currently employed on a mid-term charter at Dörytol in southern Turkey. The FSRU will be delivered to Hong Kong to begin testing and commissioning when the project finishes construction, currently expected in 2021.

### India

In May 2019, Indian Oil Corporation commissioned the **Ennore** LNG terminal. This is the first LNG terminal on the east coast in South India. It has a regasification capacity of 5 MTPA of LNG and two storage tanks of 180,000 m<sup>3</sup> each.

GSPC LNG has developed an onshore LNG terminal with a capacity of 5 MTPA, expandable up to 10 MTPA, at **Mundra**, in the state of Gujarat. The terminal includes berthing and unloading facilities for ships with a capacity ranging from 70,000 m<sup>3</sup> to 265,000 m<sup>3</sup> and two LNG storage tanks of 160,000 m<sup>3</sup> each. The commissioning of the terminal was completed in February 2020.

H-Energy, a unit of Hiranandani group, is at an advanced stage in the commissioning of India's first FSRU-based LNG terminal project at **Jaigarh** Port, in Ratnagiri district of Maharashtra. Phase-I of the project consists of a jetty based FSRU with a 4.0 MMTPA capacity. H-Energy has executed an agreement with Total for the charter of its *Cape Ann* FSRU, which has a storage capacity of 145,000 m<sup>3</sup> and is also able to reload LNG onto other LNG vessels. It is connected to the market through two major natural gas pipeline networks, namely Dabhol-Bangalore Pipeline (DBPL) and Dahej-Uran-Panvel-Dabhol Pipeline (DUPL-DPPL) at Dabhol, Maharashtra. The FSRU was slated to arrive on site to begin commissioning in the last week of March 2020. First deliveries are expected around six to eight weeks thereafter.

Adani Ports is constructing an onshore LNG terminal at **Dhamra** port in Odisha, on India's north-east coast. The terminal will have an initial regasification capacity of 5 MTPA, expandable to 10 MTPA and two full containment tanks of 180,000 m<sup>3</sup> capacity each. Indian Oil and Gail have booked regasification capacity for 3 MTPA and 1.5 MTPA, respectively. The terminal is expected to be commissioned during the second half of 2021.

Swan Energy Ltd. is developing an offshore 5 MTPA LNG terminal at **Jafrabad** port in Gujarat. The FSRU was ordered from Korea's Hyundai yard in August 2017. A jetty is planned to berth vessels up to Q-max size. The company targets completion of the construction in 2020.

Atlantic Gulf & Pacific (AG&P) is developing a 1 MTPA FSRU-based LNG import facility at **Karaikal** Port, South India. Commercial operations are expected by the fourth quarter of 2021.

HPCL Shapoorji Energy has awarded the EPC work to Toyo Engineering for a new regasification plant at **Chhara** in Gujarat State on the west coast of India. The regasification terminal will have a send-out capacity of 5 MTPA and a storage capacity of 200,000 m<sup>3</sup>. It is scheduled to be completed at the beginning of 2022.

In June, Petronet LNG completed the expansion of **Dahej** terminal. The nameplate regasification capacity of the terminal is now 17.5 MTPA, after having added two vaporizers. The company commissioned India's first LNG dispensing station and launched the first commercially approved and registered LNG bus to commute its employees. It has also commissioned its second LNG dispensing station at **Kochi** Terminal in 2019. **Dabhol** terminal in Maharashtra is in the process of developing break water facilities by 2021 - 2022, enhancing capacity to 5 MTPA. In addition, it is commissioning its third storage tank.

In January 2019, Shell announced completion of the acquisition of Total's 26% equity interest in the **Hazira** LNG terminal. This takes Shell's ownership to 100%. In October 2019, Total expanded its partnership with the Adani Group to contribute to the development of the Indian natural gas market. The 50/50 partnership includes several assets across the gas value chain notably two import and regasification LNG terminals: **Dhamra** in East India and potentially **Mundra** in the West.

### Indonesia

At **Arun**, PTK, a subsidiary of PT Pertamina, has acquired an LNG-fueled tug boat to serve the terminal. In July, Höegh LNG completed class renewal afloat of **PGN FSRU Lampung**. The renewal was completed while the vessel remained at its offshore location.

### Italy

In May 2019, Australian fund First State Investments acquired Uniper's 48.24% share in **OLT offshore LNG Toscana**.

In February 2020, Snam completed the acquisition from Iren Group of a 49.07% stake of the regasification terminal.

Nuove Energie, a company owned by Enel Global Trading, continues to develop an LNG regasification terminal in the industrial area of **Porto Empedocle**, Sicily. The project with a nominal send-out capacity of 6 MTPA is fully authorized.

### Jamaica

In July, New Fortress Energy commenced operating a floating LNG regasification terminal off the coast of **Old Harbour** Bay in Jamaica. With a storage capacity of 125,000 m<sup>3</sup> and a regasification capacity of 3.6 MTPA of LNG, FSRU *Golar Freeze* will serve a 15-year charter with New Fortress Energy and supply gas-fired power plants.

### Japan

Hokkaido Gas is currently expanding the **Ishikari** LNG Terminal in Hokkaido. The fourth LNG storage tank will be completed in 2020.

JERA has completed the construction of two storage tanks with a capacity of 125,000 m<sup>3</sup> each at its **Futtsu** terminal and has added four BOG compressors at the **Chita** terminal.

In September MOL announced that it had participated in an LNG bunkering trial at the **Port of Kobe**, organized by the Kobe City Port and Harbor Authority, and carried out bunkering for the LNG-fueled tugboat *Ishin*. This marks the first LNG bunkering in the Port of Kobe.

### Lithuania

In November, Klaipedos Nafta made a decision to acquire FSRU *Independence* by the end of 2024.

### Mozambique

KARMOL (Karpower International and Mitsui OSK lines) is developing a LNG-to-powership project in Nacala. The FSRU is being converted from the existing LNG carrier *Dwiputra*, while the powership is currently operating with heavy fuel oil to produce electricity for Electricidade de Moçambique (EDM).

### Netherlands

**Gate** terminal invested in increasing the ship loading flow rate for large ships from 2,300 m<sup>3</sup>/hour to 4,000 m<sup>3</sup>/hour to lower port time for vessels.

### Pakistan

In January 2020, Excelerate and Engro Elengy Terminal signed a HOA for the expansion of the LNG

import terminal located in **Port Qasim**, Pakistan. Under the agreement, Excelerate will exchange its existing FSRU *Exquisite* with a newbuild FSRU, Hull 2477, currently under construction in South Korea. Hull 2477 will increase the send-out capacity by more than 1 MTPA of LNG and increase LNG storage capacity from 150,900 m<sup>3</sup> to 173,400 m<sup>3</sup>. Excelerate will take delivery of the vessel, which has been chartered from Maran Gas in April 2020, and anticipates beginning expanded operations in Pakistan prior to winter 2020.

## Panama

In October, AES Corporation announced the start of commercial operations of the first LNG storage at the **AES Colón plant**.

**AES Colón plant.** AES Colón consists of the 180,000 m<sup>3</sup> LNG tank and a 381 MW combined cycle power plant, which reached commercial operations in 2018. GasLog signed a 10-year time charter with **Sino-Iam LNG Terminal** for the provision of a converted 155,000 m<sup>3</sup> floating storage unit (FSU) to a gas-fired power project being developed near Colón in Panama.

## Philippines

In September, First Gen Corporation announced that it has chosen JGC as the EPC contractor for its LNG terminal project in **Batangas** City. The company will look to start building the modified jetty and the early completion of this work will allow an FSRU to be brought in on an interim basis. The FSRU will allow First Gen to receive LNG as early as 2021.

## Poland

In October 2019, Polskie LNG S.A. signed a contract with Selas-Linde for the purchase of two additional submerged combustion vaporisers (SCVs), key equipment for the expansion program of the LNG terminal in **Świnoujście**. There are currently five SCV vaporizers installed in the terminal, four in operation and one redundant.

Polskie LNG is planning to expand operations at the facility through three key projects: the construction of a third LNG storage tank, delivery of additional process installations increasing the regasification capacity to 7.5 billion cubic meters per year, and a transshipment facility together with a railway siding.

## Russia

In January, the commissioning ceremony for an offshore receiving terminal called *Marshal Vasilevskiy* was held in the Kaliningrad region. Since then, the FSRU has been used as an LNG carrier and no imports have been recorded.

## Singapore

In February 2019 SLNG completed modifications to its second jetty at the **Jurong** terminal. The modifications included the installation of a new marine loading arm and gangway, and new facilities for securing small LNG ships at the jetty. The terminal is now able to receive and reload small LNG vessels ranging between 2,000 m<sup>3</sup> and 10,000 m<sup>3</sup>. Pavilion Energy and Total signed a 10-year deal to develop a LNG bunker supply chain in the **port of Singapore**. The cooperation includes the shared long-term use of the newly built 12,000 m<sup>3</sup> GTT Mark III LNG bunker vessel operated by MOL.

## Spain

Enagás has awarded a contract to Spanish engineering company Ayesa to redesign the jetty at its **Huelva** LNG terminal. The revamped mooring set-up will enable the loading of small-scale gas carriers, including LNG bunker vessels, and the direct loading of bunker tanks on LNG-powered vessels.

## South Korea

KOGAS has completed the construction of its small-scale regasification terminal at the Aewol port on **Jeju island**. The LNG terminal has two LNG storage tanks with a capacity of 45,000 m<sup>3</sup> each and regasification facilities with a capacity of 0.4 MTPA. The terminal received its first cargo which was reloaded at KOGAS' Tongyoung terminal in September. In January 2020, KOGAS announced that it has commenced the FEED for of its fifth regasification terminal in **Dangjin**. The terminal will include ten LNG storage tanks with a capacity of 200,000 m<sup>3</sup> each, related regasification facilities and a jetty for vessels of up to 270,000 m<sup>3</sup>. The first phase of the construction is expected to start in 2022.

## Taiwan

The phase 2 expansion program at CPC's **Taichung** terminal was completed at the end of 2019. The expansion includes three new LNG storage tanks with a capacity of 160,000 m<sup>3</sup> each, related regasification facilities and additional equipment. It will commence operations in early 2020.

CPC's third receiving terminal located at **Datan Borough**, Taoyuan in northern Taiwan is under construction and is expected to commence operations in 2023.

## Thailand

In January 2019, PTT completed the expansion of **Map Ta Phut** LNG terminal, increasing capacity from 10.7 MTPA to 11.5 MTPA. The company plans to test the reloading facilities in 2020.

PTT is also developing the **Nong Fab** LNG receiving terminal in Rayong. The terminal is expected to be completed in 2022. It will have a total regasification capacity of 7.5 MTPA.

## Turkey

FSRU *Turquoise* replaced *Höegh Neptune* at **Etki** LNG import terminal. With 170,000 m<sup>3</sup> storage, the *Turquoise* FSRU has a design regasification capacity of 5.7 MTPA. The vessel is capable of reloading and bunkering LNG.

## Vietnam

A consortium of Samsung C&T and Petrovietnam Technical Services Corporation started construction of the **Tibai** LNG terminal in the coastal area southeast of Ho Chi Minh City. The facility will provide natural gas to the Nhon Trach combined cycle power plant. The terminal includes a 180,000 m<sup>3</sup> LNG storage tank and will be constructed over a 40-month period starting in June 2019. It is expected to be completed in October 2022.

In September, Delta Offshore Energy (DeltaOE) and LNG Limited (LNGL) jointly announced an alliance with the **Bac Lieu** Provincial Government to develop an LNG-to-power project. The project includes the construction and operation of an LNG import terminal, a 3,200 MW combined-cycle power plant and delivery of power generation to the Bac Lieu Province. The integrated project is expected to commence operations in 2023 pending government approvals.

# Regasification terminals at the end of 2019

# About GIIGNL

**GIIGNL is the international association of LNG importers.** It constitutes a forum for exchange of information and experience among its members with a view to enhance safety, reliability, efficiency and sustainability of LNG import activities.

GIIGNL is a non-profit organisation registered under the French law of 1901 and its resources only come from the membership fees.

## Governance

The Association is composed of two main governing bodies: the General Assembly and the Executive Committee.

**The General Assembly** is composed of the whole membership and holds its annual meeting in the Fall.

**The Executive Committee** is currently composed of **12 member companies**, who are elected by the General Assembly for 2-year terms and meet at least once a year. The Executive Committee elects a Bureau composed of the President and of 3 regional Vice-Presidents to assist him.

The Executive Committee steers two **Standing Study Groups** within which leaders from the LNG industry offer their commercial and technical expertise to improve efficiency and safety across the midstream of the LNG value chain.

GIIGNL's day-to-day activities are coordinated by the **General Delegate**, in charge of the Central Office located near Paris (Neuilly-sur-Seine).

### GIIGNL Staff
