

Technical Project Manager – Smart Mobility 🚆

Railway Technologies | Join the ELLEON Collective

*Are you passionate about engineering systems that move the world? At **ELLEON**, we are expanding our team with **Technical project Managers** ready to lead the next-generation railway vehicles.*

Why Join ELLEON?

*At **Elleon**, we are more than an engineering consulting company—we are a **collective**. We empower engineers to drive innovation, build sustainable solutions, and shape the future of mobility. With our dedicated **Mobility Practice**, we support leading players in the railway industry to deliver safe, efficient, and cutting-edge transport solutions.*

By joining us, you gain access to:

- High-impact projects in mobility and digital transformation
- A strong community of engineering professionals
- Certified leadership coaching & continuous development
- Flexible career models and a commitment to work-life balance

Your Role

As a **Technical Project Manager – Railway Systems**, you will lead engineering activities for projects in the railway sector, from design to delivery. You will ensure that technical solutions meet customer needs, quality standards, and regulatory requirements, while driving collaboration across multidisciplinary teams.

You will work closely with engineers, suppliers, and customers to manage technical scope, risks, and planning—turning complex challenges into sustainable results.

Your Key Responsibilities

- Lead the technical execution of railway projects (trains, metros, trams, or signalling systems).
- Define, coordinate, and monitor technical scope, requirements, and deliverables.
- Act as the main interface between engineering, suppliers, and customers on all technical matters.
- Manage risks, quality, costs, and deadlines related to technical activities.
- Support testing, validation, and commissioning phases with a strong focus on safety and compliance.
- Ensure innovation and sustainability are embedded into project delivery.

Who You Are

- MSc Degree in Electrical, Mechanical, Systems, or Industrial Engineering (or equivalent).
- Proven experience in railway projects (rolling stock, signalling, or infrastructure).
- Strong project management skills with knowledge of planning, risk management, and quality processes.
- Excellent communication and leadership skills to manage stakeholders and teams.
- Fluent in English and German (French &/or a plus).
- Curious, structured, and motivated to work in a dynamic and international environment.

What We Offer

- 💡 **Part of The Elleon Collective** – Connect with top engineers building the future of mobility.
- 🚀 **Personal & Career Growth** – Access leadership programs and technical upskilling.
- 👤 **Women in Engineering and Family Friendly Initiatives** – Supporting diverse career paths with flexible models.
- 📚 **Continuous Learning** – Annual budget for certifications and further education.
- 🏡 **Well-being & Benefits** – Occupational pension plans, wellness support, and more.

Join Us & Build the Future

We are hiring now!

If you are an ambitious **Technical Project Manager** ready to drive transformation in the railway industry and grow within an inspiring engineering community — **ELLEON** is for you.

📄 Apply today! Applications are reviewed on a rolling basis.

At **ELLEON**, we celebrate diversity and believe in equal opportunities for all. We encourage candidates from all backgrounds to apply.
