Why compliance and risk feel broken—and how DataBee fixes them

Security, compliance and risk teams are tired of chasing audits, wrangling siloed data and reacting to risks too late. DataBee enables Continuous Compliance & Risk Management (CCRM) by automating control monitoring and delivering real-time, transparent insights that align compliance and risk with business outcomes. It's not just about checking boxes: it's about proving governance, reducing exposure and leading with confidence.

Across most organizations, compliance and security operations are bogged down by manual reporting, fragmented data and reactive workflows. These inefficiencies don't just slow teams down—they increase risk exposure and delay remediation. DataBee's integrated platform—combining Continuous Controls Monitoring (CCM), Vulnerability & Asset Exposure Management, and a unified data foundation—addresses these root causes with automation, correlation and real-time visibility across compliance and risk operations.

Your challenge	How DataBee supports CCRM
Manual audits and reporting	Automated evidence collection and validation
Siloed compliance and risk data	Unified data fabric for connected insights
Mapping controls to frameworks	Pre-built mappings for NIST, PCI-DSS and ISO 27001
Lack of real-time visibility	Continuous dashboard updates and alerts
Difficulty proving governance	Transparent, traceable outputs for audit readiness
Critical vulnerability with no clear owner	Correlates assets, owners and vulnerabilities across disparate sources for faster remediation

Unlock clarity, control and confidence with DataBee CCRM.

Real-time oversight across frameworks, like NIST, PCI-DSS, CIS-18 and ODMs

Audit-ready reporting with automated evidence collection

Outcome-driven insights that tie compliance to risk reduction
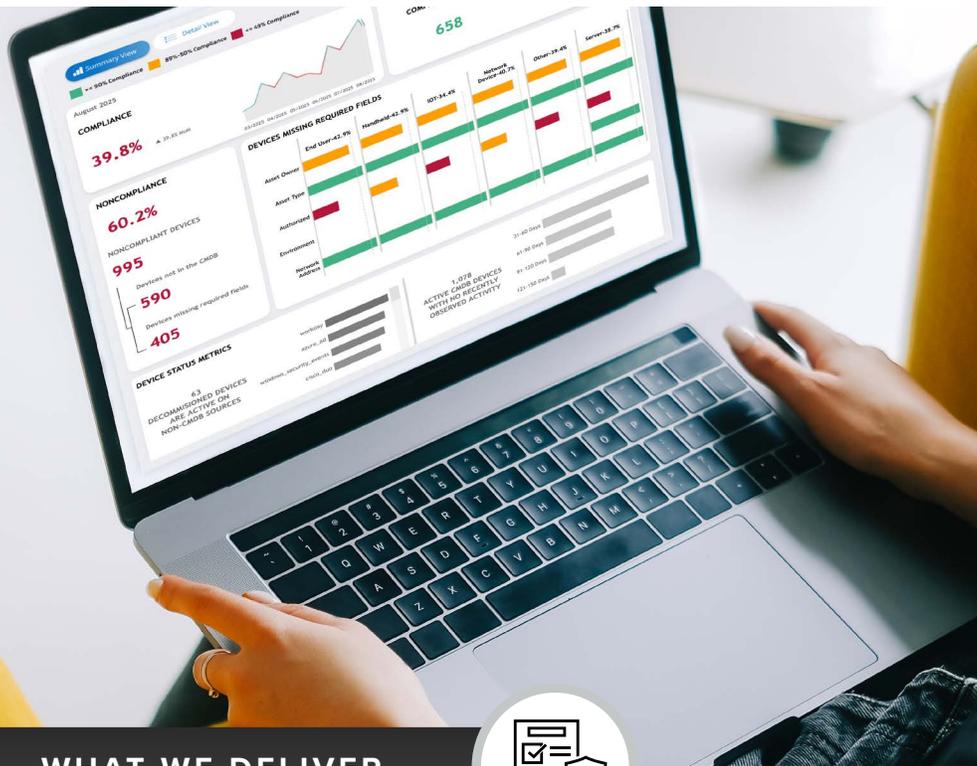

Modular integration with GRC, SIEM, SOAR and ticketing systems

Dashboards and alerts tailored to compliance, risk and security teams

WHAT WE DELIVER

Build for scale, transparency and trust.

Everything you need to operationalize continuous compliance: DataBee powers Continuous Compliance & Risk Management at scale with transparency and trust. Every deployment includes capabilities across Continuous Controls Monitoring (CCM), Vulnerability & Asset Exposure Management, and compliance data integration.

Here's what's included in every deployment:

- A centralized dashboard for compliance and risk posture
- Pre-built and customizable control libraries
- Automated evidence collection and validation workflows
- Alerts and reports tailored to your teams
- Seamless integration with your existing tools and data pipelines
- Correlation of assets, owners and vulnerabilities for faster remediation

How DataBee supports Continuous Compliance & Risk Management:

1 **Connect data**

The platform integrates logs, configurations, policies and other sources to unify compliance and risk insights.

2 **Align data**

Our solution maps data to frameworks like NIST, PCI-DSS and ISO 27001, and continuously monitors control effectiveness.

3 **Detect gaps**

DataBee identifies gaps by detecting anomalies, trends and vulnerabilities tied to compliance and risk exposure.

4 **Report & act**

Your teams receive insights through dashboards, alerts and audit-ready reports that support faster decisions and remediation.
