

## SOLUTION BRIEF

# See the signals, understand the impact and respond with confidence.

***Gain unified visibility and confident investigations without traditional complexity.***

The DataBee Detection Hub helps simplify investigations and threat hunting by aggregating network telemetry from BluVector, Zeek, Suricata and other resources into a single, searchable interface. Designed for enterprise-scale environments, it enables long-term retention, correlation and analysis of network activity, empowering teams to act faster, reduce noise and gain clarity without relying on legacy workflows.

## What's at stake

**When every second counts, clarity is critical.**

Modern security operation centers (SOCs) and network operation centers (NOCs) face overwhelming volumes of alerts and fragmented visibility. Thousands of raw events obscure what matters, slowing investigations and inflating budgets. Without a better approach, teams risk missed patterns, higher operational costs and delayed response.

We address key pain points:

- **Alert overload:** Thousands of raw events overwhelm SOC and NOC teams.
- **Fragmented context:** Teams have difficulty linking activity across tools and environments.
- **Lack of network visibility:** NOCs may lack the tools to see detailed network telemetry.

## What you gain

**From raw signals to meaningful insight, gain confidence in what your data reveals.**

The DataBee Detection Hub transforms BluVector detections into a broader, correlated view of network activity, reducing complexity and cost while accelerating investigations.

- **Gain unified network visibility** across IT, IoT and OT.
- **See real-time detection** of high-risk behaviors.
- **Benefit from cost-efficient** log storage and analysis.
- **Access correlated signals and deeper understanding** for faster, more confident investigations
- **Gain insights from dashboards and filters** that accelerate forensic workflows.
- **Employ high-fidelity signals** that reduce false positives and alert fatigue.

## Ready to see the signals, understand the impact and act with confidence?

Request a demo to see how the DataBee Detection Hub helps your team surface meaningful signals, understand the impact and take decisive action without traditional complexity or overhead.
