

PRODUCT BRIEF

DataBee® RiskFlow™

Create your own security compliance insights clearly, quickly and with confidence.

DataBee®
A COMCAST COMPANY

DataBee RiskFlow is a GenAI-powered tool within the DataBee platform that gives security teams the ability to ask questions in plain language and receive explainable, traceable answers. DataBee RiskFlow’s “ask-a-question” interface quickly delivers transparent, trustworthy insights, making it ideal for answering security and compliance questions directly from your data.

What’s at stake

Bottlenecks delay insight creation

Security teams face mounting pressure to deliver insights quickly but are faced with challenges.

- **Teams need answers quickly and are tired of waiting.**
Investigations stall when insights are delayed or buried in complex workflows.
- **Orgs rely heavily on data engineering resources.**
Security teams often depend on specialized support to access and interpret data.
- **Analysts are bogged down by questions they can’t easily answer.**
Without intuitive tools, even basic queries can become time-consuming and frustrating.
- **Leaders are distrustful of black-box AI solutions.**
Decision makers want transparency and trust, not just automation.

What you gain with DataBee

Get insights at the speed of a question

- **Trust every answer:** See exactly what data was used, what logic ran and how the result was produced.
- **Smarter AI with context-aware insights:** Built-in security compliance context delivers fast and accurate answers.
- **Ask better questions:** Use natural language—no SQL or data engineering knowledge required.
- **Move faster:** Get answers in seconds or minutes, not days.
- **Security Compliance-focused AI:** DataBee’s AI agent guides users through data exploration and remediation.
- **Spot compliance gaps and anomalies:** Build queries that surface deviations from expected behavior or policy adherence.

Find out how DataBee can help your organization.

Schedule a demo

Turn your questions into actionable insights.

The Solution: DataBee RiskFlow’s ask-a-question natural language interface lets users:

- Ask ad hoc questions directly of their data.
- Receive trustworthy, explainable answers.
- View the data and logic behind every result.
- Turn answers into real-time shareable dashboards.

Get measurable results:

- ▶ **Cut time-to-insight from weeks to minutes.**
- ▶ **Reduce engineering dependency for dashboard creation.**
- ▶ **Enhance compliance reporting with transparent logic.**
- ▶ **Help teams build targeted, transparent queries to uncover security posture exposures, compliance gaps or policy violations faster.**

databee.ai

Get answers in four simple steps.

DataBee RiskFlow makes insight creation effortless—just ask a question, and let GenAI handle the rest with full transparency and traceability. Users ask questions and get insights immediately without having to define the data model.

- 1 Input:** User types a question in natural language.
- 2 Interpret:** GenAI interprets the question and identifies relevant data.
- 3 Validate:** DataBee RiskFlow applies traceable logic to ensure explainable results.
- 4 Output:** The answer is presented with robust explanation.

Turn compliance data into clear answers and faster remediation paths

- **Agentic, natural language AI for data exploration:** Allow users to ask questions about compliance metrics in plain language and get explainable answers.
- **Bring compliance analysis to the first line of defense:** Anyone can act on findings and get insights without deep data expertise.
- **Increase efficiency and proficiency of risk analysts:** Accelerate investigation and reporting without heavy training or consulting.
- **Determine exposures and remediation paths faster:** Not days or weeks of manual effort.

DataBee®, a Comcast Company, offers the DataBee cloud-native security, risk and compliance data fabric platform, and DataBee BluVector, an on-premises network detection and response (NDR) platform, to some of the world's large enterprises and federal agencies. We help our customers work smarter with an evidence centric approach to security that prepares them for what's next. Developed and proven at scale, DataBee delivers connected security and compliance data and insights that can work for everyone in an organization. Built to protect critical government and enterprise networks, DataBee BluVector delivers AI-powered NDR for visibility across network, devices, users, files, and data to discover and hunt skilled and motivated threats.
