

DataBee® Executive Metrics & Reporting

Bring clarity and credibility to every executive conversation.

DataBee equips CISOs and risk leaders with a unified view of program performance, with consistent, defensible metrics grounded in source data, across frameworks, audiences, and reporting cycles.

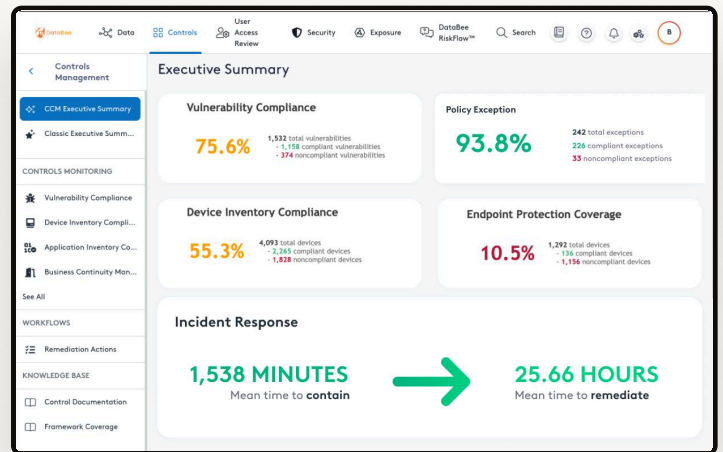

VALUE PROPOSITION

Leaders are expected to stand behind numbers they didn't compile – and metrics often shift depending on the audience. DataBee Executive Metrics & Reporting changes that by grounding every metric in a consistent, trusted data foundation, so conversations focus on decisions rather than validating numbers or rebuilding reports last-minute. When paired with DataBee Continuous Controls Monitoring (CCM), the same control measurements operations teams act on become the metrics executives report.

KEY OUTCOMES

- Consistent, defensible metrics.** Every number is grounded in source data with consistent definitions across teams and reports.
- Faster decisions, fewer follow-ups.** Reports surface priorities clearly, so leadership conversations focus on what to do next, not on validating the numbers.
- Board prep cut from days to hours.** Continuously updated dashboards replace manual report assembly and reconciliation cycles.

HOW IT WORKS

01 Connect

DataBee aggregates data from 350+ tools across security, IT, and business systems into a single, consistent foundation, so executive metrics are grounded in shared inputs, not stitched-together summaries from different systems.

02 Align

DataBee applies consistent definitions and calculations, so the same risk produces the same number across teams, reports, and frameworks, whether the audience is the board, audit committee, or operations teams.

03 Deliver

Dashboards refresh in near real-time, so board prep becomes a standing output rather than a quarterly scramble, with current, defensible numbers always at hand.

KEY CAPABILITIES

- **Consistent metric definitions everywhere they appear.** The same risk or performance indicator is defined, calculated, and presented consistently across every team, report, and audience.
- **Defensible numbers.** Every metric is grounded in its source data, with clear definitions and consistent calculations across teams and report.
- **Prioritized, decision-ready reporting.** Reports surface what matters most, with clear ownership and urgency, so leaders focus on decisions rather than interpretation.
- **Real-time risk and controls monitoring.** Metrics refresh automatically as data changes, replacing manual, weeks-long reporting cycles with current visibility into your security risk and controls posture.
- **Explainable agentic AI for cyber risk.** DataBee RiskFlow™ analyzes your security metrics in natural language, summarizing program performance and KPIs, exploring trends, and answering questions, with every answer explainable and grounded in the source data.

WHY DATABEE

One platform, many outcomes

From control monitoring to vulnerability remediation to executive reporting, every DataBee solution runs on the same connected data foundation, so investment in the platform compounds across your program.

Works with what you already have

DataBee connects to your existing security, IT, and business systems, bringing fragmented data together without disrupting the platforms your teams rely on.

Your data, your storage, no lock-in

DataBee normalizes and processes data, then places it in your existing data lake or cloud storage, giving you a flexible, cost-effective storage model. Your data stays yours, with no vendor lock-in.

Current and defensible

What you see reflects your environment today, not last quarter's snapshot. Every result is grounded in its source data, so teams across security, risk, and operations work from the same trusted numbers.
