ANNUAL REPORT
2022 - 2023

LNG Technical Work

- 🔥 Marcogaz Technical Groups are currently preparing the Work Program for the coming year. This is a good opportunity to get input from our stakeholders, including GIIGNL, on potential joint technical assessment on LNG.
- 🔥 The planned/ongoing work include:
 - 🔥 Technical assessment of the **GAS QUALITY** of imported LNG due to diversification of sources after the energy crisis.
 - 🔥 The future role of existing LNG assets, like LNG terminals with low carbon gases.

European
Commission

Political Guidelines on Energy European Commission

🔥 The New European Commission has made public its Energy objectives for the coming five years.

🔥 These Objectives will be aligned with Draghi Report which is addressing European competitiveness and the future of the European Union.

🔥 Among the objectives presented by the Commission, some will impact the LNG in medium-long term, particularly:

1. Legal framework for European grids for electrification
2. Clean industrial deal for competitive industries focusing on decarbonization
3. Acceleration of deployment of small modular reactors and ensuring nuclear safety
4. Industrial carbon management strategy – CCS
