Daigas
Group

Item 5 : New Products and services for LNG Trade

Company Overview – Abaxx Exchange

Abaxx Exchange is a trading platform that **creates efficiencies and transparency to the Global LNG marketplace that is innovative and useful** (and even more so to newer entrants to the LNG market). The solution provided enables new players to **easily access the global market and reduce risk**, which is beneficial in the current geopolitical climate.

It is headquartered in Singapore and regulated by the Monetary Authority of Singapore (MAS). The Exchange operates alongside its own Clearing House, providing **post-trade clearing, settlement services and to mitigate counterparty credit risk**.

Abaxx Exchange Futures offers contracts that are ready to trade (*and others under development*):

LNG Futures Contracts – These extend 24 months forward and are physically deliverable across the three main global LNG hubs:

- **GOM** (FOB US Gulf of Mexico – soon to be “Gulf of America”)
- **NWE** (DAP North West Europe, incl. UK to Spanish Med)
- **NPA** (DAP North Pacific Asia, equivalent to JKTC region)

All this is governed and financially secured through the “rules” of the exchange (which are similar to an MSA) and the financial guarantees of the Abaxx Clearing House and its Clearing members.

Abaxx Exchange supports the continued development of a more open, reliable, and resilient LNG marketplace aligned with the evolving needs of the industry and its participants.
