

GIIGNL Joint 45th CSG and 78th TSG Meetings

Osaka, Japan

Sept 29th – Oct 2nd, 2025

Hosted by:

 **OSAKA GAS**
Daigas
Group

Item 2 : GHG Emissions- IEA report on Natural Gas Certification

Ms. Carole ETIENNE

Gas and LNG Analyst, Gas, Coal and Power Markets Division

Directorate of Energy Markets and Security

International Energy Agency (IEA)

Ms. Etienne was appointed Gas and LNG Analyst in December 2022. **She contributes to the IEA's Quarterly Gas Market Reports**, currently overseeing the reports' LNG shipping market updates, gas and LNG project developments in India and Africa, security of supply-related topics and low-emissions gases.

She interacts with the Bureau - notably with the Chairman - of the IEA's *Natural Gas and Sustainable Gases Security Working Party (GWP)* and has a **leading role in the GWP Secretariat** in the organization and preparation of its meetings, including at Ministerial level.

Conducted by a team of IEA analysts and experienced officials from energy ministries of IEA Member countries, she is **part of the delegation for IEA In-Depth Reviews (Senegal in 2023 and Mozambique in 2024), serving as the main advisory contact point for any natural gas- and LNG-related questions**. Over the past 40 years, the IEA In-Depth Review exercise has been one of the IEA's core activities which reviews more than 30 Member countries, the approach being to interview a majority of a country's energy-sector stakeholders to then provide policy recommendations to Member-country ministries; today this exercise extends beyond Member countries.

She is one of the **lead authors of the India Gas Market Report – Outlook to 2030, which was presented at the Indian Energy Week in February 2025 in Delhi**.

She has an engineering background and has over 20 years of experience of working on gas-related topics for major gas companies, such as ENGIE and TotalEnergies. Before joining IEA, she held several positions covering various aspects of the gas value chain, from R&D to operations in LNG infrastructure, shipping and trading. She also advised senior management at TotalEnergies on strategic decision-making regarding investments in natural gas, LNG and low-emission gases.
