

[Tohoku Electric Power Co., Inc.]

1 . Changes in company leadership since the last General Assembly

- Kojiro Higuchi appointed as Chairman and Representative Director as of April 1, 2025
- Kazuhiro Ishiyama appointed as President and Representative Director as of April 1, 2025

2 . Electricity Sales Volume and Power Source Composition

In fiscal year 2024, our electricity sales volume reached 78 billion kWh, a decrease of 1.6% compared to the previous year.

Additionally, the power source composition for the electricity sold in fiscal year 2024 was as follows:

Coal: 34%, Gas: 31%, Nuclear: 3%, Hydroelectric (over 30,000 kW): 3%, and New Energy and Others: 29%.

3 . LNG Procurement of Tohoku Electric

Currently, our company procures approximately 4 million tons of LNG annually from countries such as Malaysia, Qatar, Russia, Australia, and the United States, through a combination of long-term, short-term, and spot contracts.

Looking ahead, we will continue to optimize our LNG procurement volume in response to changes in the electricity market and efforts toward carbon neutrality.

4 . Key Events

☐ In October 2024, at Unit 5-1 of the Niigata Thermal Power Station (Niigata City, Niigata Prefecture, 54,500 kW), we conducted a hydrogen co-firing test in which hydrogen was mixed with the existing fuel (LNG) and combusted in a gas turbine to generate electricity. We achieved a hydrogen co-firing ratio of approximately 8% by volume, the highest level attained with our equipment.

☐ In December 2024, Unit 2 of our Onagawa Nuclear Power Station resumed commercial operation for the first time in approximately 14 years. This is expected to contribute to stable power supply and reduction of CO₂ emissions.
