

BioDot CellWriter™ S Low Volume eXtension (LVX)

**Maximizing performance
from limited specimens.**

Overview

The CellWriter S LVX is a specialized tube rack upgrade that expands the capabilities of the CellWriter S system by enabling precise aspirating and dispensing of very low-volume samples. The LVX rack was designed with challenging specimens in mind, such as Multiple Myeloma and other low-yield cases. With improved success rates, minimized waste, and optimized workflow, the CellWriter S LVX rack delivers measurable gains in lab performance.

“The CellWriter S LVX rack delivers new precision to low-volume workflows—maximizing accuracy, efficiency, and sample recovery while extending the value of your existing CellWriter system.”

– Steve Sfamenos, Field Applications Supervisor, MDx

Benefits

Maximized Sample Recovery

Narrow 2 mL screw-cap tube design allows aspiration to the bottom, eliminating dead volume.

Higher Success Rates

Recover rare or limited-cell specimens previously unusable in standard setups.

Improved Efficiency

Extends CellWriter S performance without hardware modifications.

Smart Software Upgrade

Optimized dispense control for low-volume workflows.

Seamless Integration

Easily activated via software unlock.

Cost-Effective

Affordable upgrade that increases slide yield and lab throughput.
