

## Description

---

The SMAVOO Lighttube is designed to support pick-by-light processes and real-time visual status communication in warehouses, production lines and Andon system environments.

As a dedicated LED-based visualization solution, the Lighttube focuses on clear and immediate communication of operational states through configurable light signals. This enables teams to

quickly identify process statuses, react to changes and improve workflow transparency.

With flexible connectivity options such as WiFi and LoRaWAN planned, the Lighttube is being developed to support different industrial environments and process requirements.

For further information about the SMAVOO Lighttube, please contact us at [sensors@smavoo.com](mailto:sensors@smavoo.com).

Smart, Seamless and Scalable. Or *Simply SMAVVO.*
