四軸半油壓轉台

第四軸搭配油壓轉台中板，特色為"一體式 L 塊設計"，包含轉台底板，轉台與尾座墊高塊..等模組化設計
夾持方式：油壓夾持/零件外型定位

加工優勢：旋轉台採用水平設置，可兩位置(0°及 90°) 角度旋轉，通過轉台搭配四軸組的應用，實現多工序集成單次完成加工，減少零件在不同機床之間的轉換及重新定位時間，提高加工效率。

- 低成本
- 簡易式固定角度(0 度~90 度) 2 位置
- 角度位置檢知
- 特殊規格歡迎訂製

轉台有 3 種模式可供選擇：
單工位、雙工位、三工位

搭配四軸組使用

4th Axis Hydraulic Rotary Table

The Fourth Axis with Hydraulic Rotary Table and Central Plate

Features: Integrated L-block Design, including a rotary table baseplate, rotary table, and tailstock riser block, among other modular designs.

Clamping Method: Hydraulic clamping / External part shape positioning

Advantages in Machining: The rotary table is set up horizontally and can rotate to two fixed positions (0° and 90° angles). With the application of a rotary table paired with a fourth-axis assembly, it enables multi-task integration and completes processing in a single operation. This reduces the time spent transferring parts between different machines and re-establishing positioning, thereby improving machining efficiency.

- Low cost
- Simple fixed-angle settings (0° to 90°) with two positions
- Angle position detection
- Custom specifications are welcome

The rotary table is available in three modes for selection:

Single station, Double station, Three stations

Used with four-axis set
