

Thrive AI Analyse

What is AI Analyse?

AI Analyse allows super admins to ask natural-language questions about Thrive Analyse data and receive structured insights, risk indicators, dashboards and recommended actions.

Instead of manually navigating dashboards and filters, you can explore your data conversationally and get intelligent analysis automatically, empowering your managers to create data visuals using natural language prompts.

What can AI Analyse do?

Thrive AI Analyse can answer questions across multiple data domains including Assigned Learning, Skills, Activity & Engagement, Completions, and Events. AI Analyse determines which datasets are relevant and begins investigating your question automatically, and can create data visuals to help you understand your data.

AI Analyse enables you to prove impact with instant dashboards and breakdowns, build smarter with greater visibility across your platform, save valuable time providing answers in seconds and give you actionable insights at your fingertips.

Understanding your results

AI Analyse provides transparent, explainable insights including:

- Clear summaries of what is happening in your data
- Key metrics and breakdowns specific to your question
- Identified risks and contributing factors that may require attention
- Root-cause insights explaining why issues are occurring
- Recommended actions prioritised by impact

The system shows you which datasets are being queried and how it reaches its conclusions, allowing you to understand why an insight has been surfaced.
