

myPatch®sl will record your heartbeat continuously for the entire duration of your test without recharging the battery.

What to do during your test?

Simply continue with your daily routines as normal, including exercise and showers.

If your doctor asked you to indicate your mild symptoms, here is how to do that:

1. **Do NOT press the silicone button** as it will stop your test.
2. Double-tap the device - a blue light will come on indicating the event is marked.
3. Record your Activity, Symptoms, and the Date and Time of occurrence in your Patient Activity Diary.

What to do if you see other lights?

A red light indicates a problem with the device and a yellow light indicates a low battery. Contact us at (800) 267-5248 for assistance.

Return the myPatch®sl recorder to your doctor's office after your study has ended.

Study Ends On
