Installations

Crescent to Crescent

Featuring 29 intricately designed moons, 'Crescent to Crescent' captures the passage of time through the evolving lunar cycle. This installation is a tribute to the sacred rhythms of the moon, where each crescent serves as a reminder of reflection and mindfulness.

FDM 3D printed and CNC-engraved acrylic cutouts, every element is seamlessly assembled to achieve a flawless design. An intelligent lighting system illuminates each moon in sequence, mirroring the celestial transition.

Finished with 14+ shades of mirror-like chrome, transitioning from silver and gold to rose gold and bronze, these pieces embody the deep connection between art, time, and craftsmanship.

3D Printed Wall

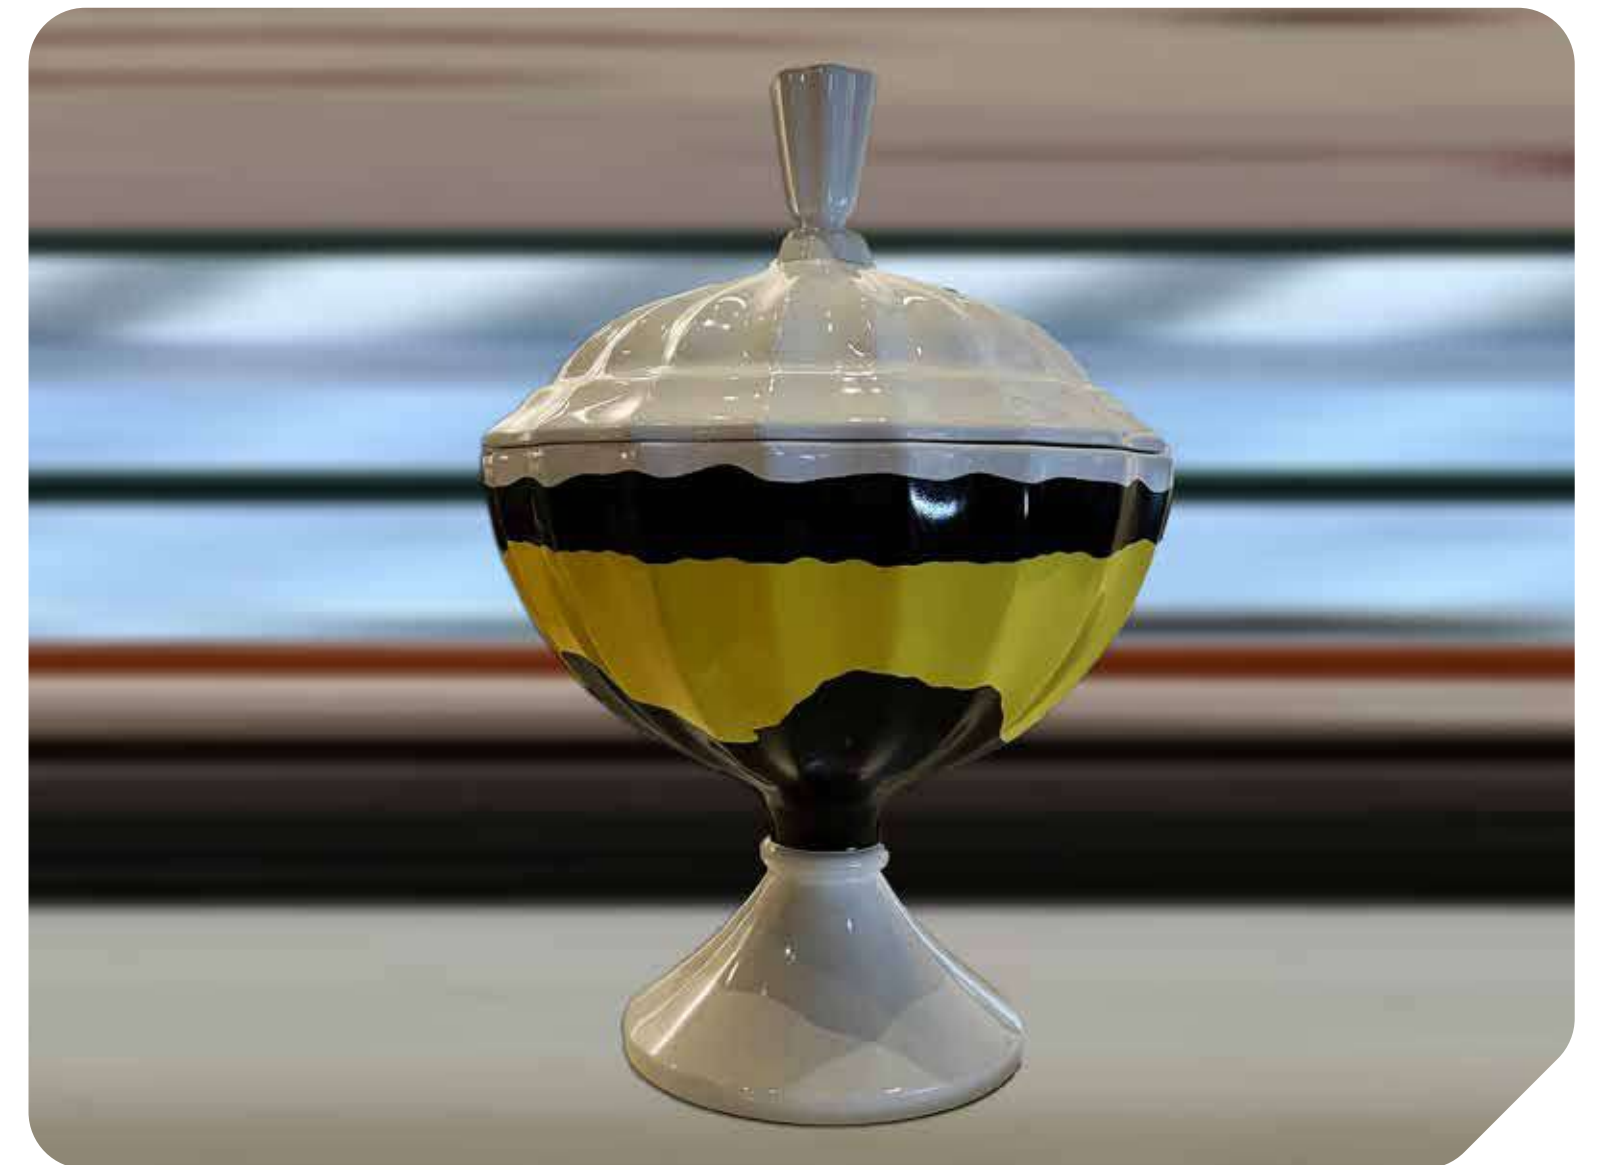

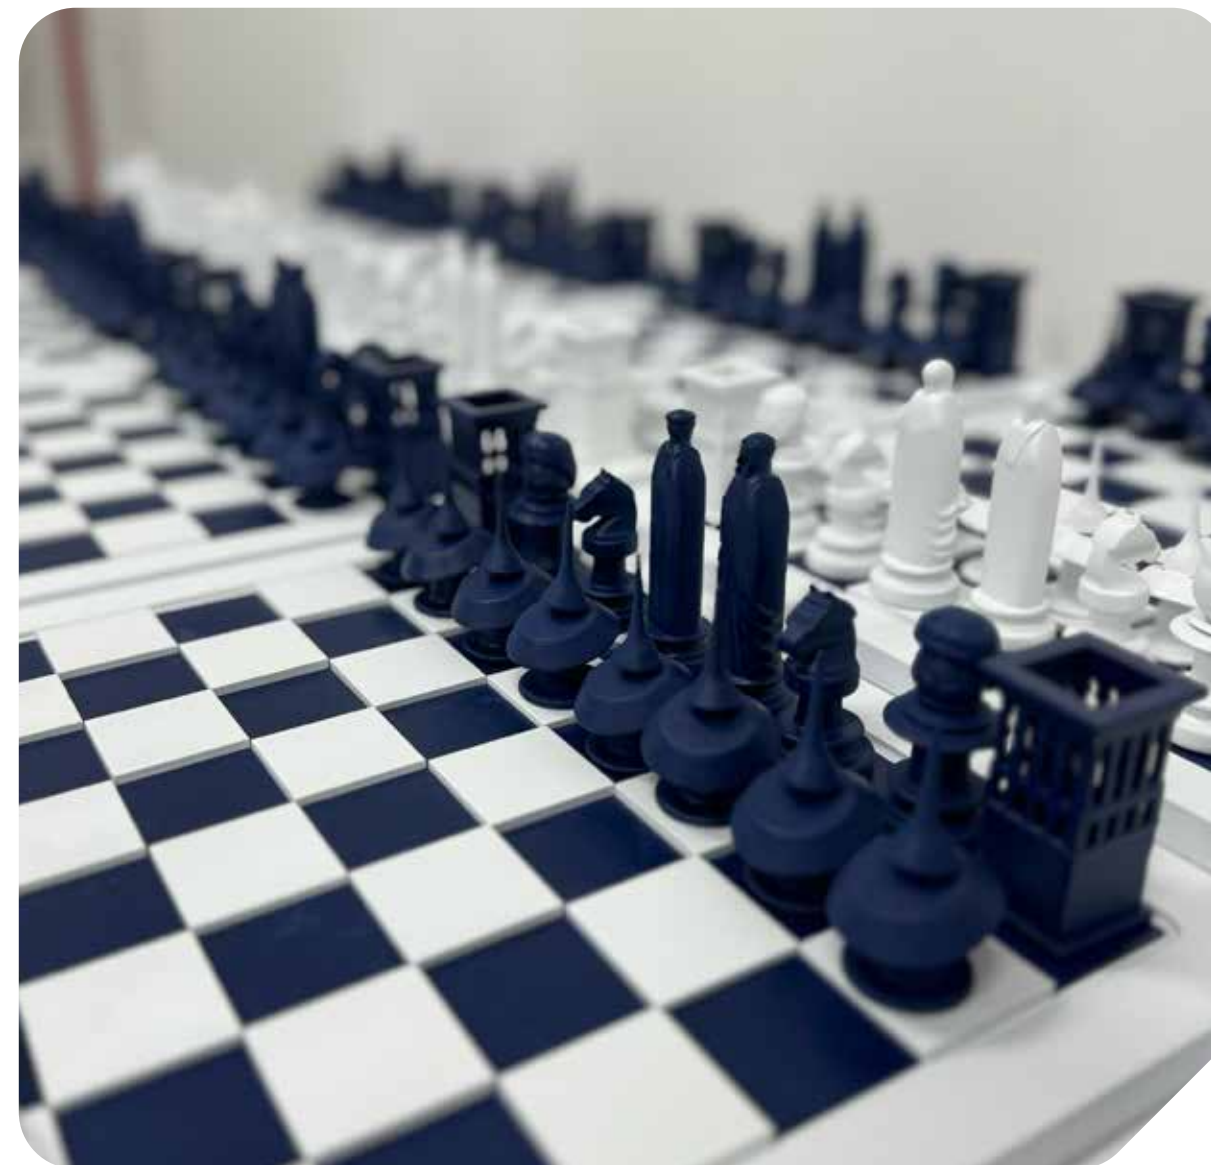

3D-printed wall cladding on marble arches, inspired by vintage window designs with olive branch motifs. Each arch is carefully measured for accurate installation of every segment.
