

Tranquil Green Initiatives

The Rogers Group is a holding company with focused market segment business units. Pioneer Works fabricates all products for these business units.

Our companies are committed to engage in sustainable green initiatives that will protect, restore, and sustain our limited natural resources.

We endorse an “environmentally friendly” position which dictates conservation of resources during the design, manufacturing, packaging, and shipping of our complete line of products. This includes purchasing green raw materials, green manufacturing processes, reduction of waste generation, improved efficiencies, and elimination of pollution.

We strive to follow green initiative programs such as Reduction of Hazardous Materials (RoHM), ISO 14001, Waste Electrical, Leadership in Energy and Environmental Design (LEED), and Electronic Equipment (WEEE). It is our policy to review every new technology that may enable us to become better corporate citizens.

Our leadership staff is committed to support and sustain green initiatives. The culmination of this commitment will be culture of conservation, safety, and pride supported by our entire organization.

Current sustainable initiatives:

1. No violations with governmental regulatory agencies
2. Low temperature powder coat paint (oven temperature reduction of 70 - 100 F.)
3. Recycling powder coat over-spray
4. Recycling cardboard honeycomb, cardboard, plastic strapping, and paper
5. Recycling all steel and aluminum waste generated by plant processes
6. Water minimization through reverse cascade system on chemical line rinse tanks
7. Reduction in electrical usage through re-lamping metal halides with fluorescence
8. Reduction of landfill waste due to extensive recycling programs
9. Minimize steel & aluminum waste by purchasing tube stock to exact lengths
10. Minimize waste by using “nesting” programs to lay out flat sheet cuts
