Gateway communication manual
Taylor solar systems

2024-026-R-0004-A8

This document gives an overview of Taylor compatible inverters, and the procedure on how to connect the inverter to the Taylor Gateway.

Important *The actions described in this manual should only be executed by trained professionals. Use this manual in combination with the inverter manual received with your inverter.*

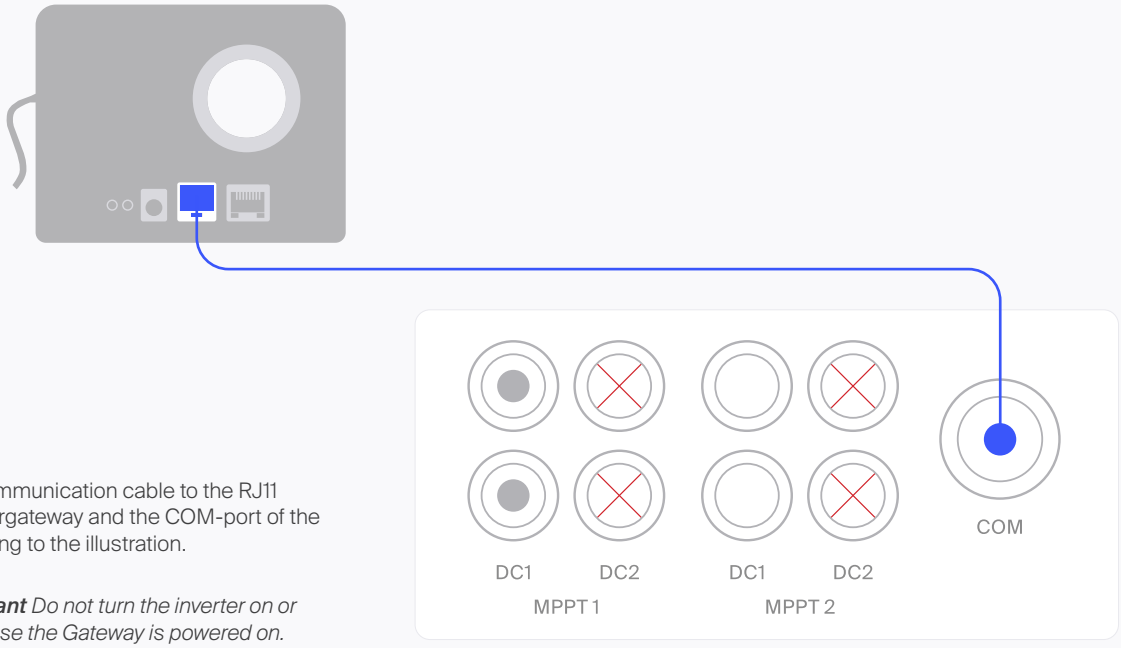
02 Inverter to gateway connection

Between the gateway and the inverter a communication cable needs to be connected.



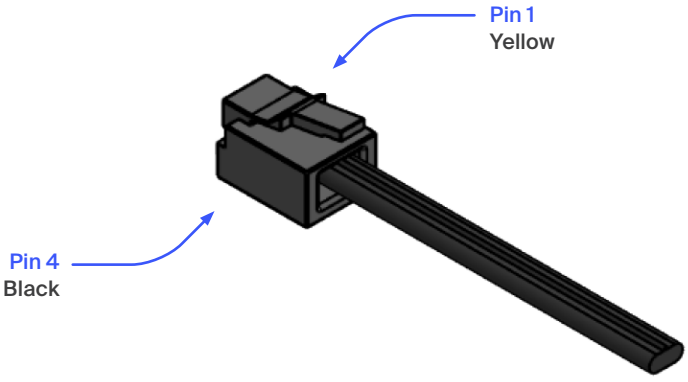
Connect the communication cable to the RJ11 port of the Taylorgateway and the COM-port of the inverter, according to the illustration.

Important *Do not turn the inverter on or off in case the Gateway is powered on.*

Gateway RJ11 connector

On one side, the cable is connected to the gateway using a RJ11 connector, the other side is connected to the inverter. The cable can be ordered, or assembled by the installer. If done by the installer himself/herself, make sure the RJ11 connector pin out is as depicted on the right, using the instructions below.

RJ11 PIN	Wire colour	Function
1	Yellow	N/A
2	Green	RS485-
3	Red	RS485+
4	Black	GND



Important *Note that the pin out color code is different compared to standard RJ11 pin out.*

03.1 Taylor inverters instructions

Taylor H1 / H1-G2 / H1-G2-WL series (produced by Fox ESS)

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H1-EC.

Data cable for installation with energy meter available. Part number: TAYLOR-GTW-C-H1-E

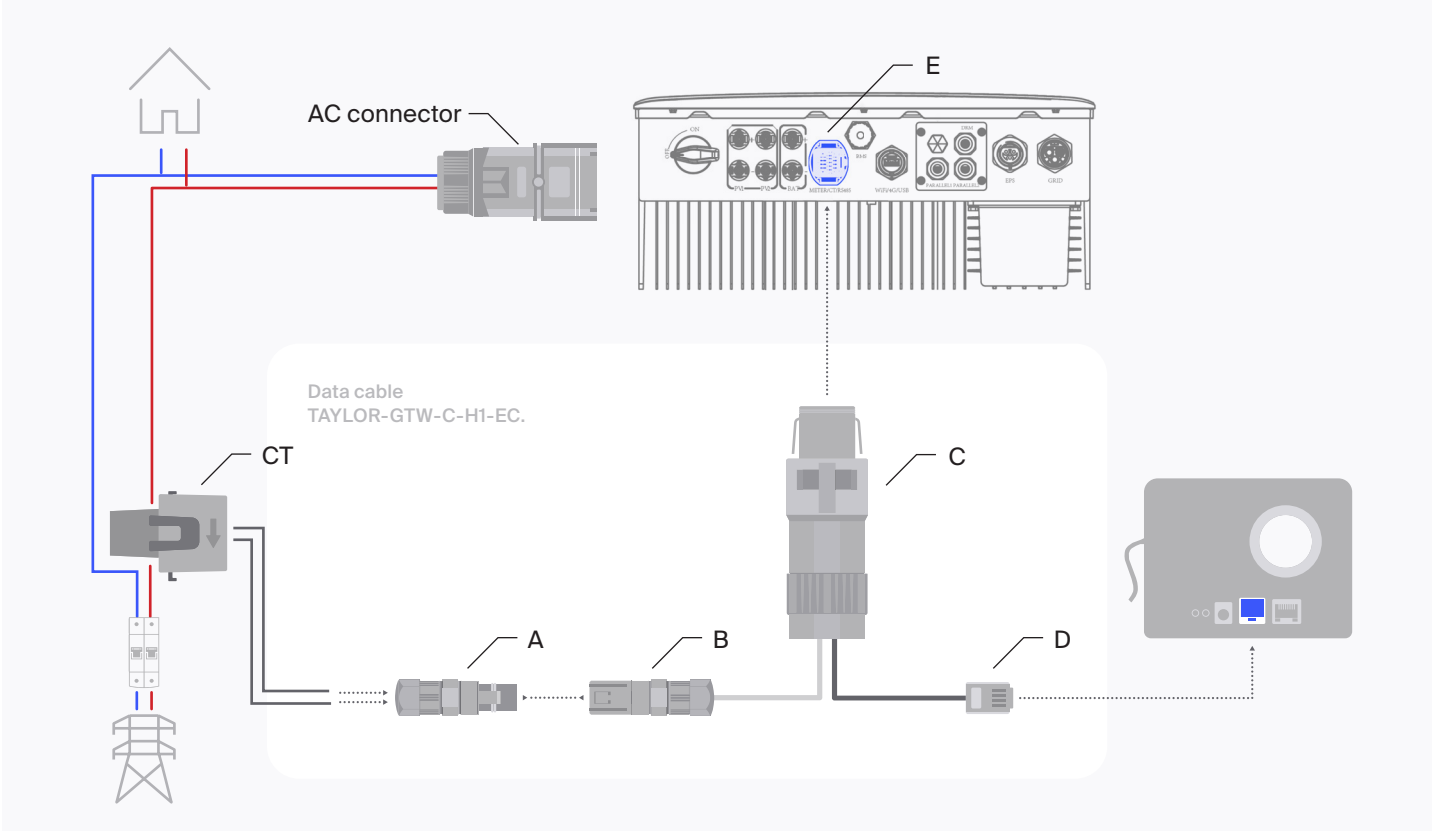
Instructions

01.
Connect the current transducer to connector (A):
- Current transducer red wire > pin 1 on connector (A)
- Current transducer black wire > pin 2 on connector (A)

Important *The current transducer should have the arrow pointing towards the grid, otherwise the import/export values will not be valid. Refer to inverter technical documentation.*

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.



03.1 Taylor inverters instructions

Taylor H1 / H1-G2 / H1-G2-WL series in a three phase system

(produced by Fox ESS)

Necessary items

A. Data cable
Part number TAYLOR-GTW-C-H1-E

B. Energy meter
Order separately from the gateway / inverter.

Instructions

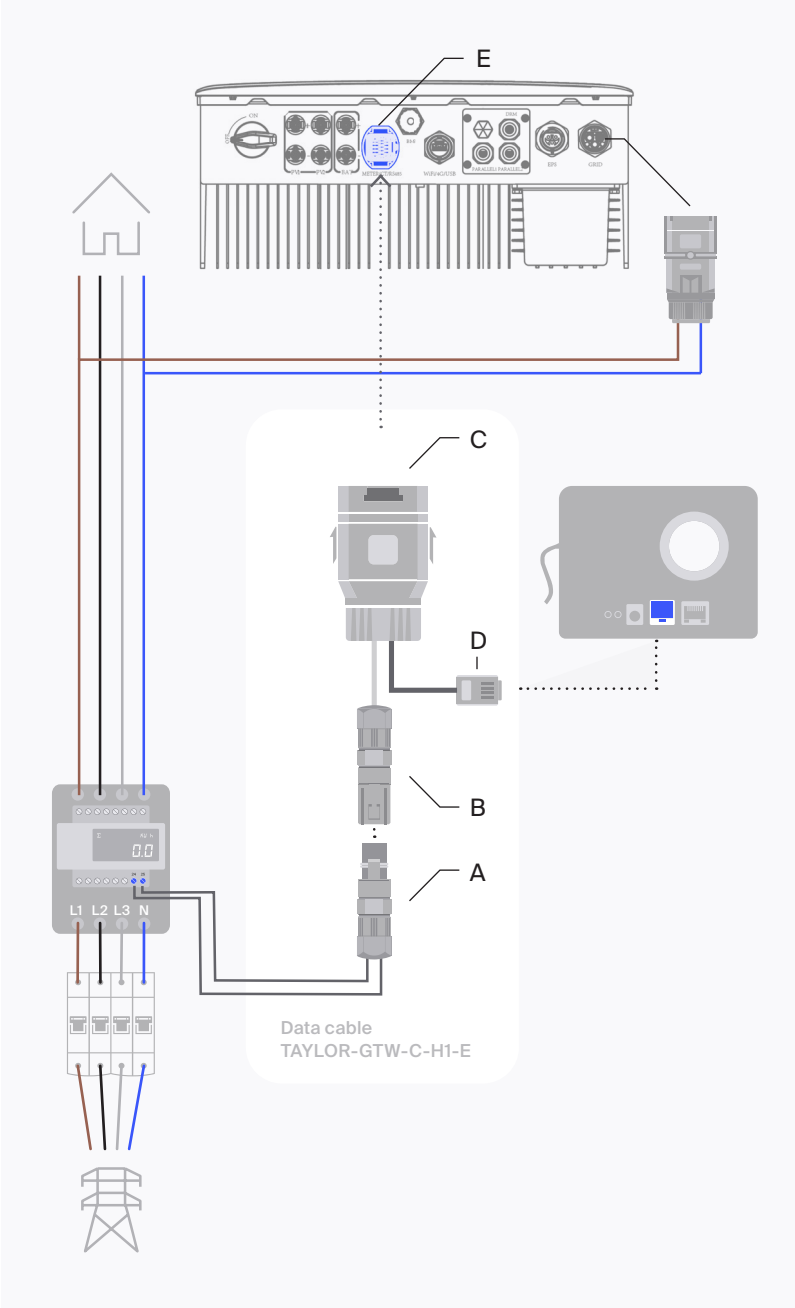
01.
Consult the schematic to install a single phase AC system to a smart meter.

02.
Connect the energy meter to connector (A):
- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

03.
Connect connector (A) and connector (B) to complete the data cable.

04.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.

05.
When installing the inverter, configure the inverter settings to 3 phase energy meter:
Setting > Feature > Meter/CT > Meter_3p



03.1 Taylor inverters instructions

Taylor H1 / H1-G2 / H1-G2-WL series in a three phase system with Delta grid

(produced by Fox ESS)

Necessary items

A. Data cable
Part number TAYLOR-GTW-C-H1-E

B. Energy meter
Order separately from the gateway / inverter.

Instructions

01.
Consult the schematic to install a single phase AC system to a smart meter.

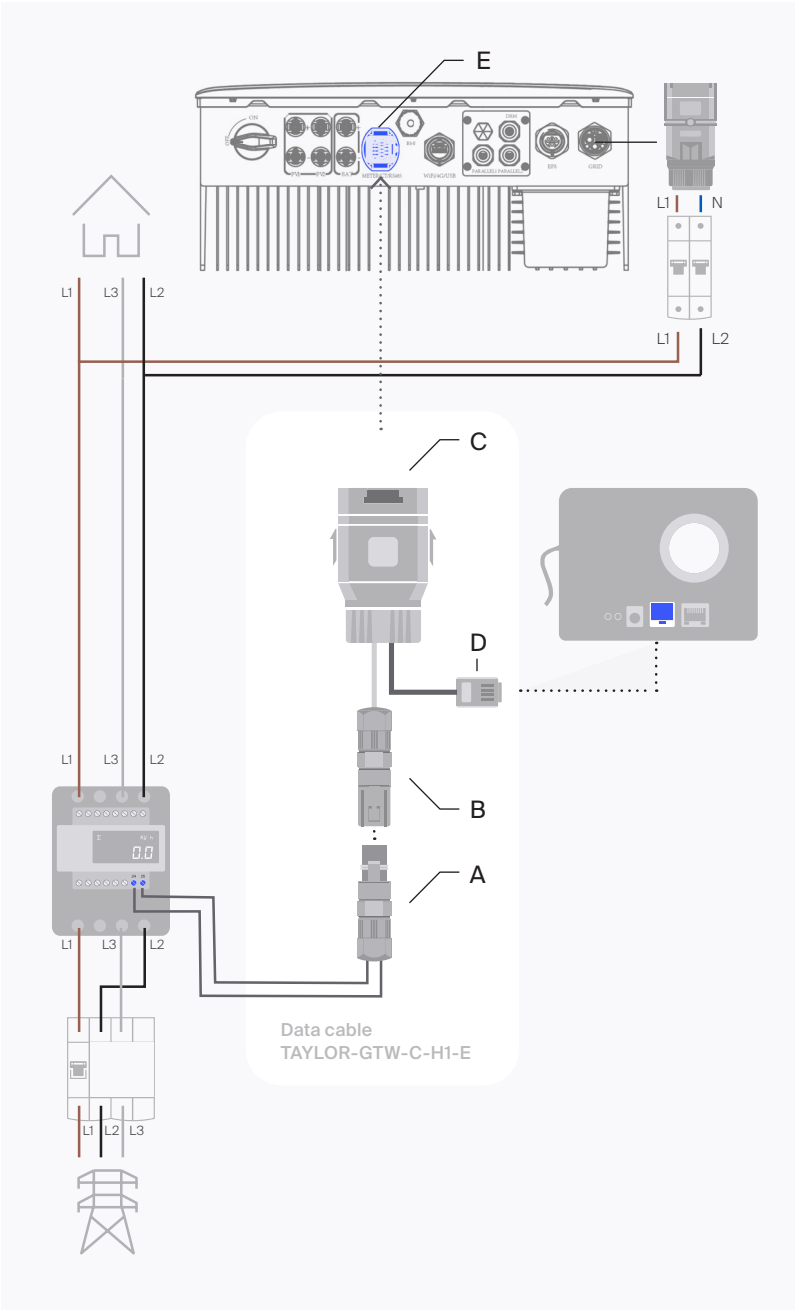
02.
Adjust the smart meter settings to Delta grid, do so by following the below sequence
A) Press “set”, change the code to 701
B) Navigate to CT using the set command
C) Press the arrow command four times until “net” appears
D) Set the net setting to n33 and confirm by pressing set again

03.
Connect the energy meter to connector (A):
- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

04.
Connect connector (A) and connector (B) to complete the data cable.

05.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.

06.
When installing the inverter, configure the inverter settings to 3 phase energy meter:
Setting > Feature > Meter/CT > Meter_3p



03.1 Taylor inverters instructions

Taylor H3 series (produced by Fox ESS)

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-E.

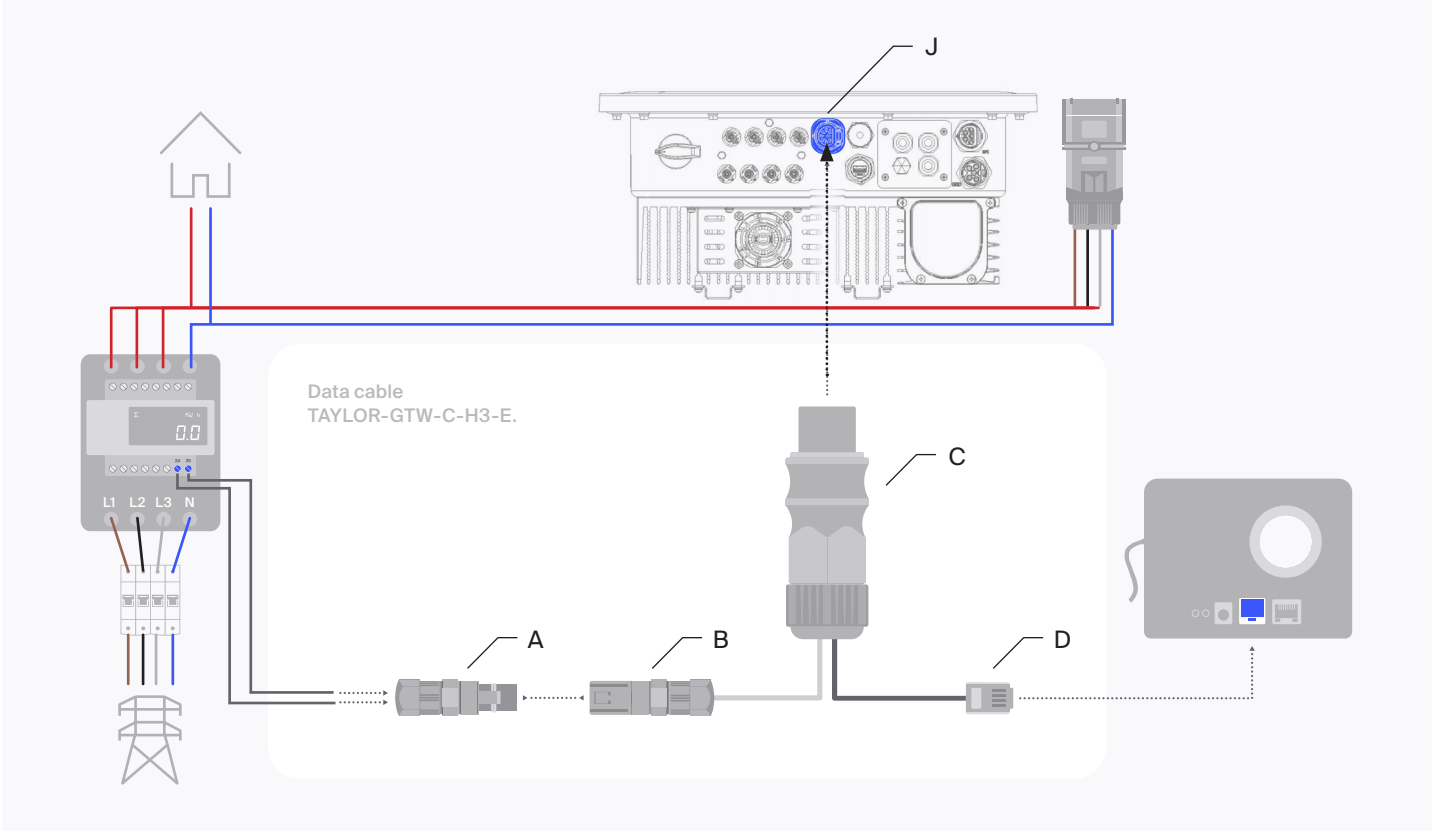
Instructions

01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (J) of the inverter and the RJ11 connector (D) to the gateway data port.



03.1 Taylor inverters instructions

Taylor P3 Pro series (produced by Fox ESS)

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-EP.

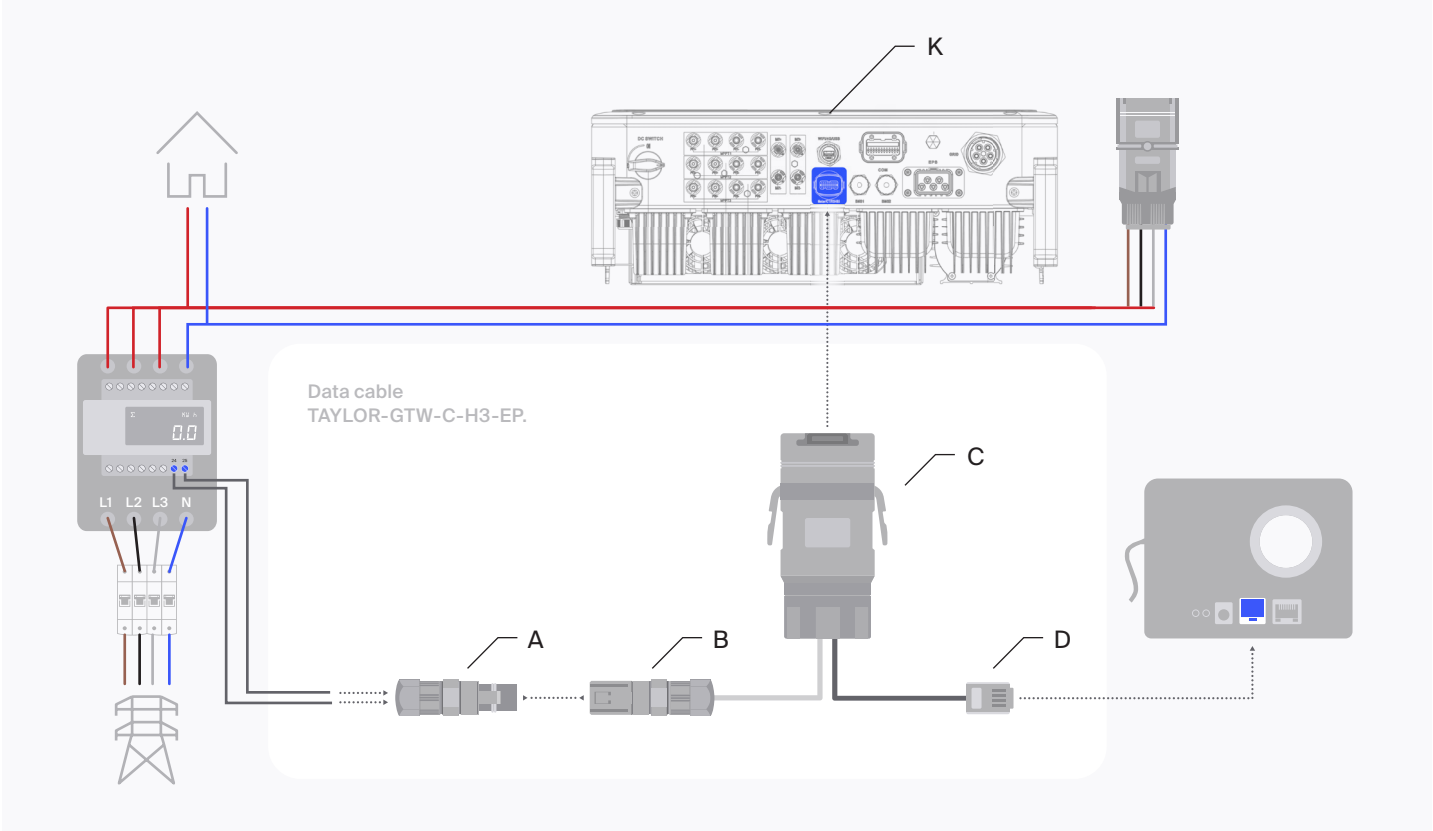
Instructions

01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (K) of the inverter and the RJ11 connector (D) to the gateway data port.



03.1 Taylor inverters instructions

Taylor P3-S series (produced by Fox ESS)

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-ES

Instructions

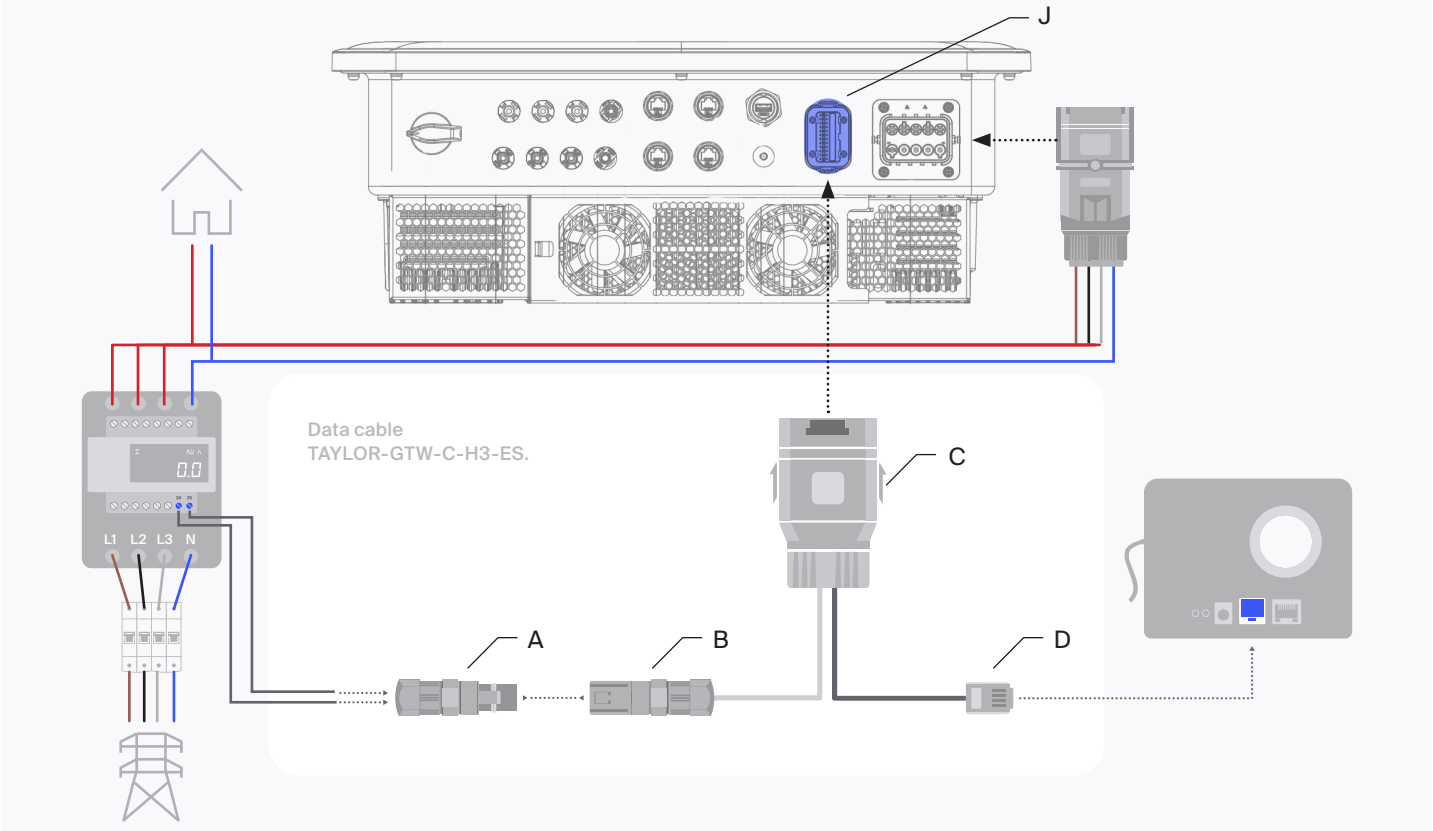
01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Make sure to not connect any other devices to pin 24 and 25 on the energy meter.

03.
Connect connector (A) and connector (B) to complete the data cable.

04.
Connect connector (C) to port (J) of the inverter and the RJ11 connector (D) to the gateway data port.



03.2 Verifying correct operation of Taylor inverter

When setting up a hybrid solar inverter system, it is crucial to ensure that the current transformer (CT clamp) or external energy meter is correctly installed. The CT clamp or energy meter must measure the total energy consumption and the feed-in of the consumer and must therefore be placed directly after the main switch.

Verification method 1 - Self-test function of the inverter

01.
Open the menu of the inverter

02.
Go to *Settings*

03.
Go to *Feature*

04.
Go to *Meter/CT*

05.
Check if the correct setting is selected:
a) When using a CT clamp → CT
b) When using an energy meter → Energy meter

06.
After the system has been connected for at least one minute, choose the option *Check* in this menu

Result H1 with CT
There are three possible outcomes:

1. Connect OK
The system is correctly connected

2. Connect Err
the CT clamp is connected in the wrong direction and must be reversed

3. Unknown state
a) the connection between inverter and meter is incorrect or the battery is not properly connected
b) The self-test is carried out without selecting whether a CT clamp
c) The self-test is carried out but the chosen option (CT or energy meter) does not correspond to the connected component

Result inverter with energy meter
There are two possible outcomes:

1. Connect OK
the system is correctly connected

2. Unknown state
a. The connection between inverter and meter is incorrect or the battery is not properly connected
b. The self-test is carried out without selecting whether a CT clamp or energy meter is used
c. The self-test is carried out but the chosen option (CT or energy meter) does not correspond to the connected component

Verification method 2 - Comparing inverter energy meter values with smart meter

01.
Compare the measurements

A.
Check the recorded power on the inverter display.
For Taylor inverters: Menu --> System/Running --> Grid

B.
At the same time, view the current consumption on the smart meter (if it has a display). Use the control button to switch to the correct screen and check whether it concerns import or export.

C.
Understand the import/export symbols of the inverter.
For Taylor inverters:

I. Export to the grid: positive value “+”
II. Import from the grid: negative value “-”

02.
Assess the difference

A.
The measurements should largely match in terms of power (kW) or energy consumption (kWh).
A small difference (within 5–10%) is acceptable due to delay, rounding, or internal processing.

B.
Both measurements must indicate the same energy flow direction: Import or Export (Import when there is no solar production and load is switched on).

03.
If the values differ significantly or show opposite directions (e.g., inverter shows export while smart meter shows import), the installation of the CT clamp or energy meter must be checked.

A.
Ensure that the CT clamp or energy meter is placed in the correct location

B.
Check whether the CT clamp is installed on the correct wire (usually the incoming phase wire) and pointing in the correct direction (according to the manufacturer’s instructions; for Taylor inverters the arrow must point to the grid).

C.
Check whether the communication cable between CT clamp or energy meter is correctly connected to the inverter (refer to the manual).

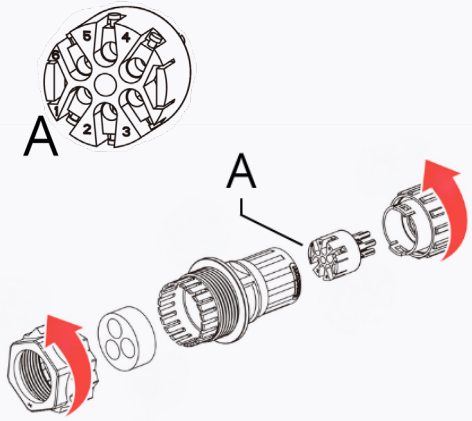
03.3 AEG inverters instructions

AEG AS-IC02 & AS-IR02

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-03.
Order separately from the gateway.

B. Communication Connector
Delivered with the inverter.

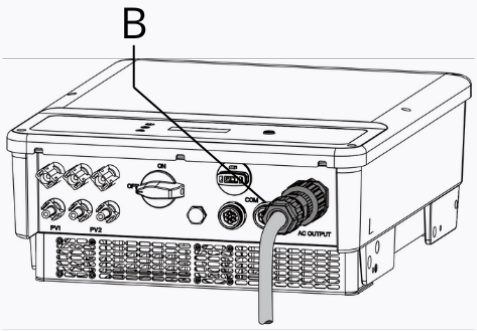


Instructions

01.
Route the taylor data cable through the cable gland (A)

02.
Connect the data cable to part A, refer to the table:

Wire	Wire colour	Connect to pin
	Yellow	Not connected
-	Green	1
+	Red	3
	Black	Not connected



03.
Assemble the connector.

04.
Connect the data cable to the COM port (B).

03.4 Fox ESS inverters instructions

Fox ESS H1 / H1 (G2) series

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H1-EC.
Order separately from the gateway.

Data cable for installation with energy meter available. Part number: TAYLOR-GTW-C-H1-E

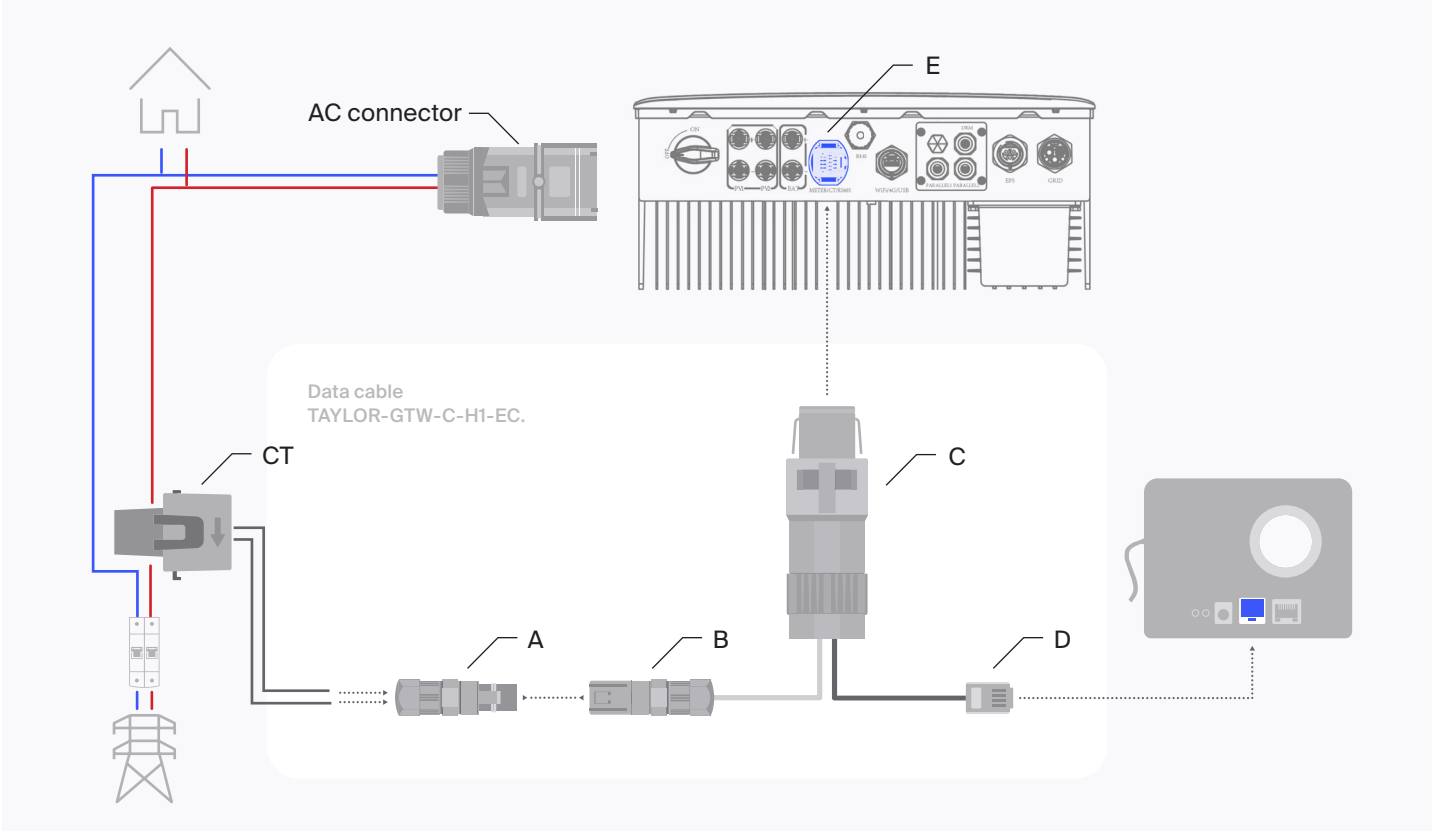
Instructions

01.
Connect the current transducer to connector (A):
- Current transducer red wire > pin 1 on connector (A)
- Current transducer black wire > pin 2 on connector (A)

Important *The current transducer should have the arrow pointing towards the grid, otherwise the import/export values will not be valid. Refer to inverter technical documentation.*

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.



03.4 Fox ESS inverters instructions

Fox ESS H1 / H1-G2 / H1-G2-WL series in a three phase system

Necessary items

A. Data cable
Part number TAYLOR-GTW-C-H1-E

B. Energy meter
Order separately from the gateway / inverter.

Instructions

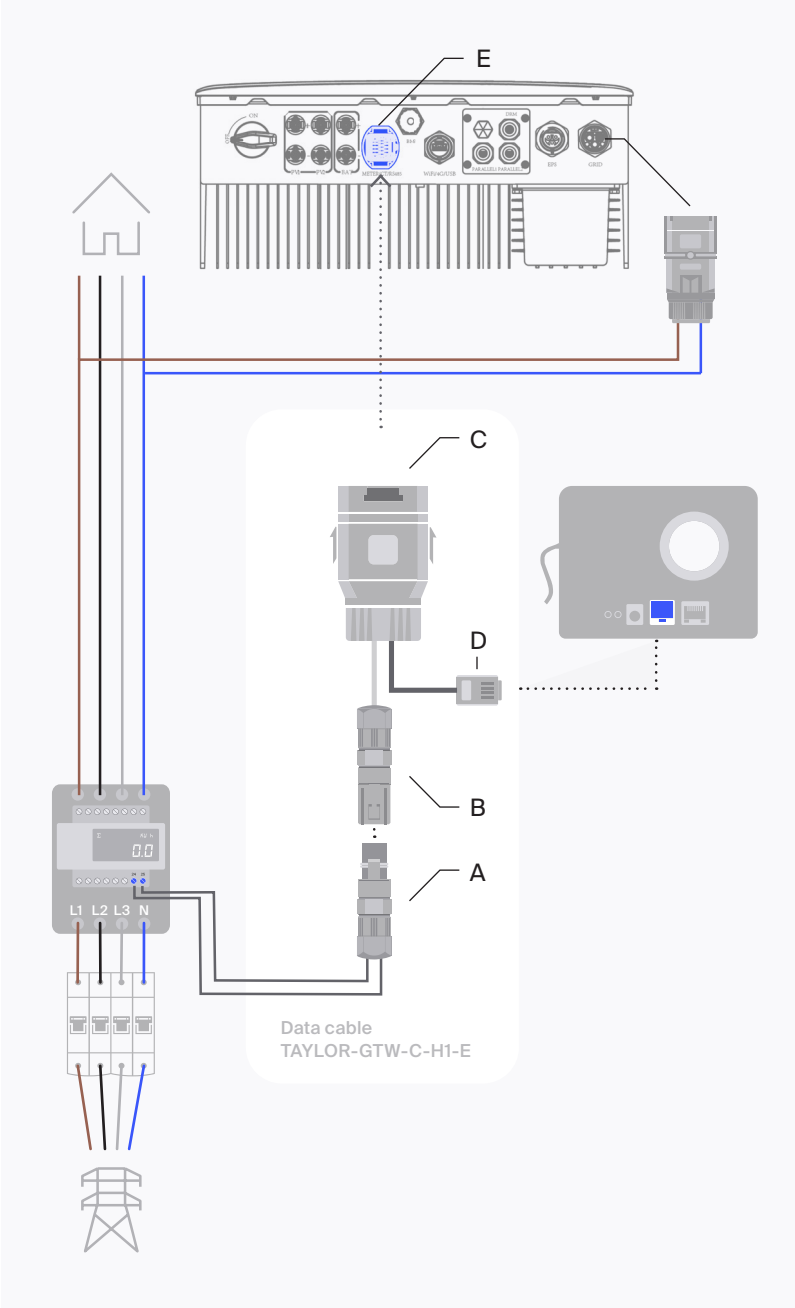
01.
Consult the schematic to install a single phase AC system to a smart meter.

02.
Connect the energy meter to connector (A):
- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

03.
Connect connector (A) and connector (B) to complete the data cable.

04.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.

05.
When installing the inverter, configure the inverter settings to 3 phase energy meter:
Setting > Feature > Meter/CT > Meter_3p



03.4 Fox ESS inverters instructions

Fox ESS H1 / H1-G2 / H1-G2-WL series in a three phase system with Delta grid

Necessary items

A. Data cable
Part number TAYLOR-GTW-C-H1-E

B. Energy meter
Order separately from the gateway / inverter.

Instructions

01.
Consult the schematic to install a single phase AC system to a smart meter.

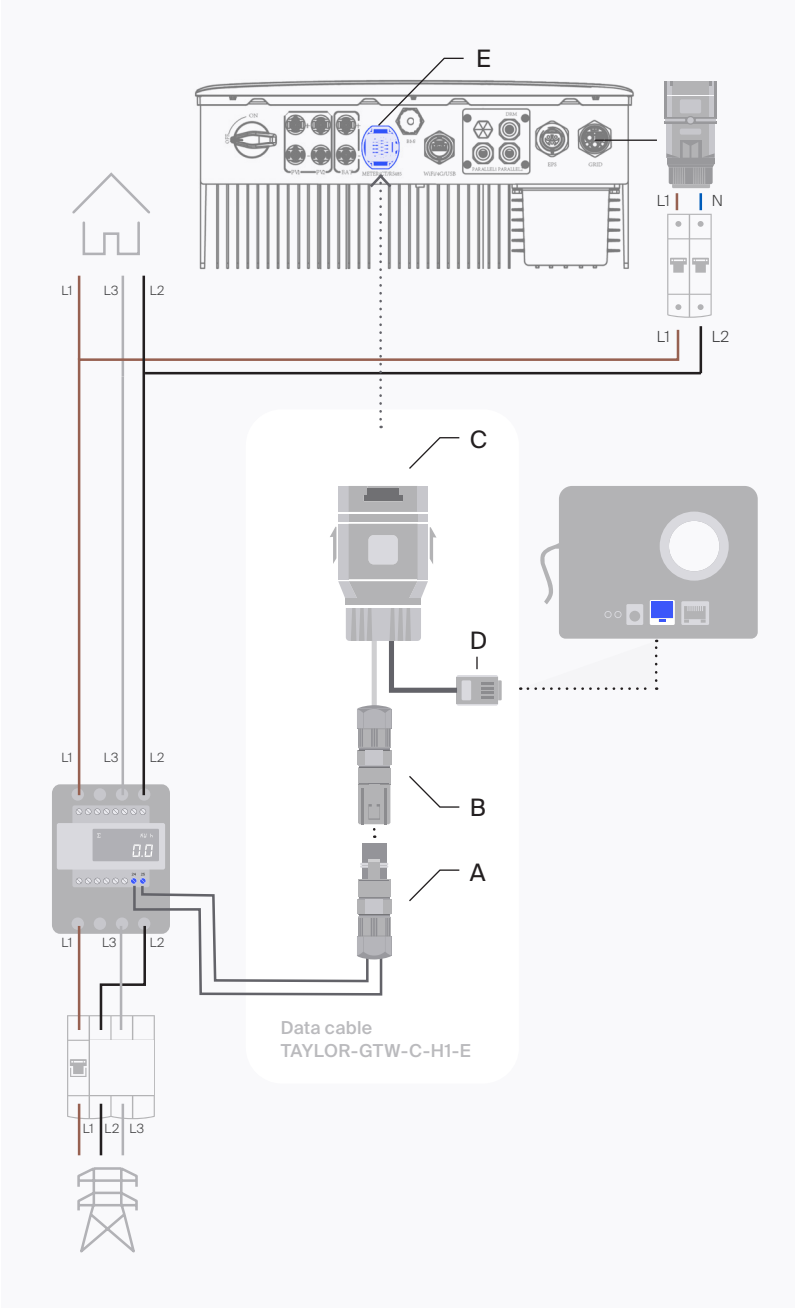
02.
Adjust the smart meter settings to Delta grid, do so by following the below sequence
A) Press “set”, change the code to 701
B) Navigate to CT using the set command
C) Press the arrow command four times until “net” appears
D) Set the net setting to n33 and confirm by pressing set again

03.
Connect the energy meter to connector (A):
- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

04.
Connect connector (A) and connector (B) to complete the data cable.

05.
Connect connector (C) to port (E) of the inverter and the RJ11 connector (D) to the gateway data port.

06.
When installing the inverter, configure the inverter settings to 3 phase energy meter:
Setting > Feature > Meter/CT > Meter_3p



03.4 Fox ESS inverters instructions

Fox ESS H3 series

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-E.
Order separately from the gateway.

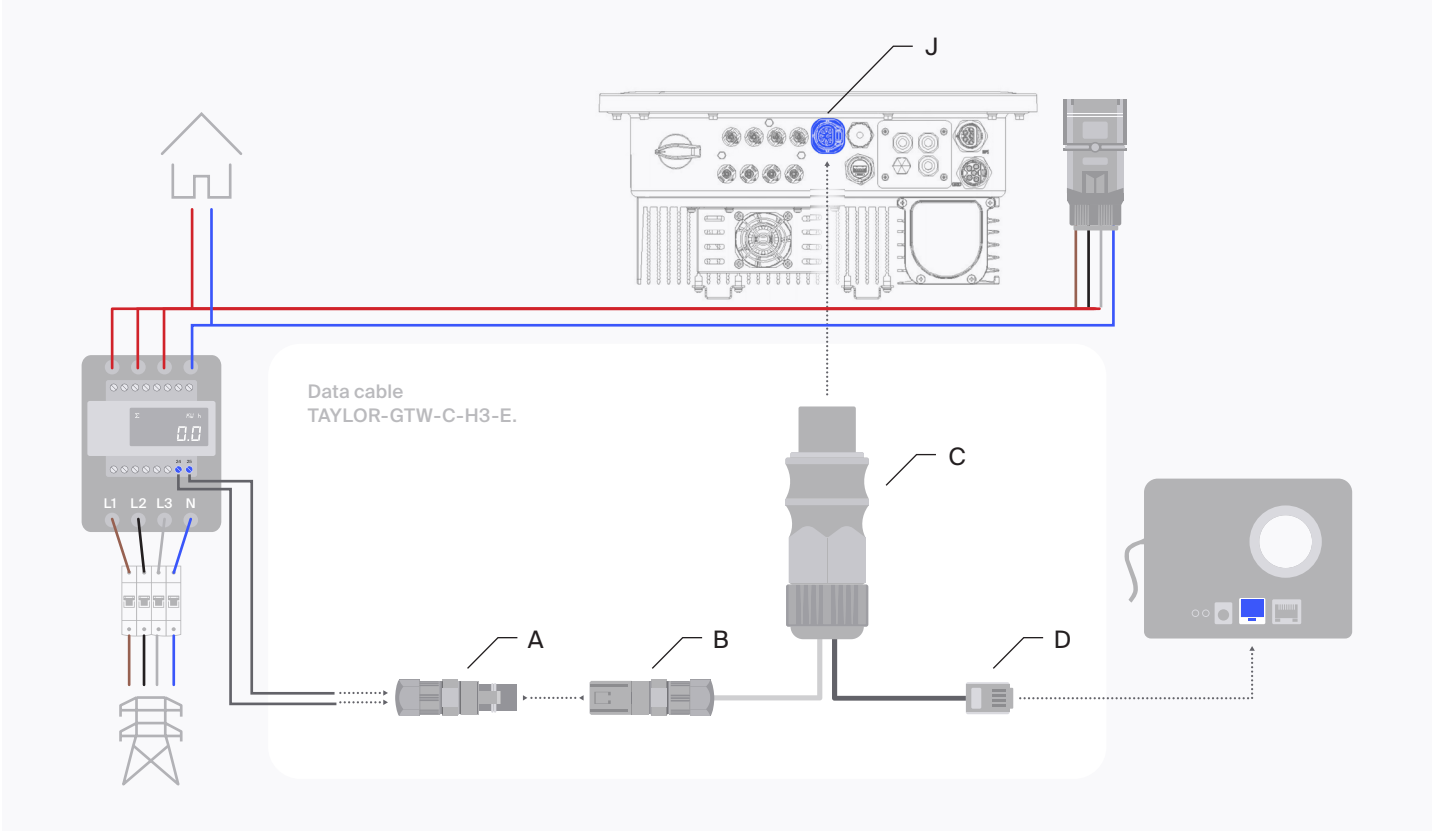
Instructions

01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (J) of the inverter and the RJ11 connector (D) to the gateway data port.



03.4 Fox ESS inverters instructions

Fox ESS P3 Pro series

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-EP.
Order separately from the gateway.

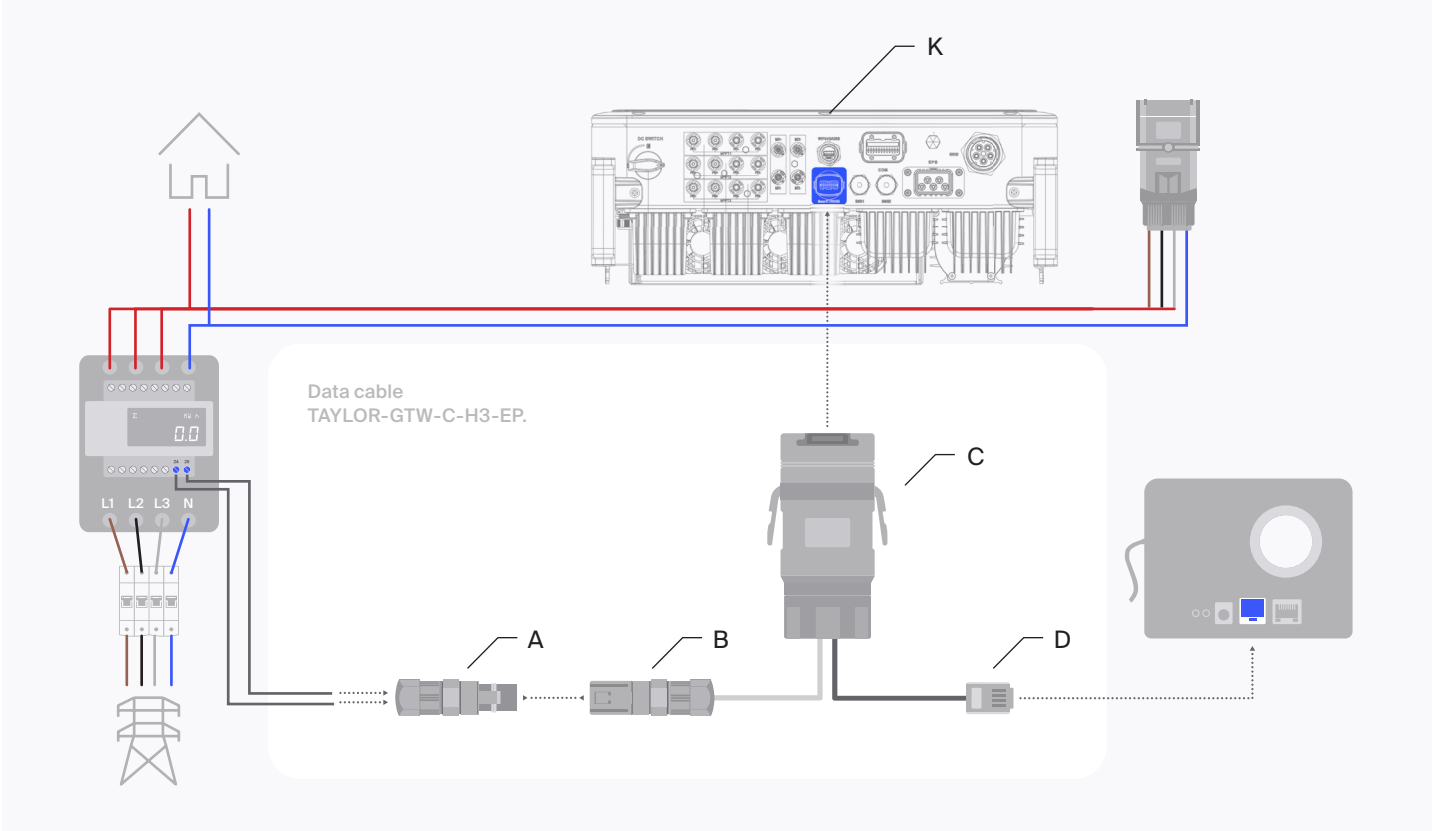
Instructions

01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Connect connector (A) and connector (B) to complete the data cable.

03.
Connect connector (C) to port (K) of the inverter and the RJ11 connector (D) to the gateway data port.



03.4 Fox ESS inverters instructions

Fox ESS P3-S series

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-H3-ES

Instructions

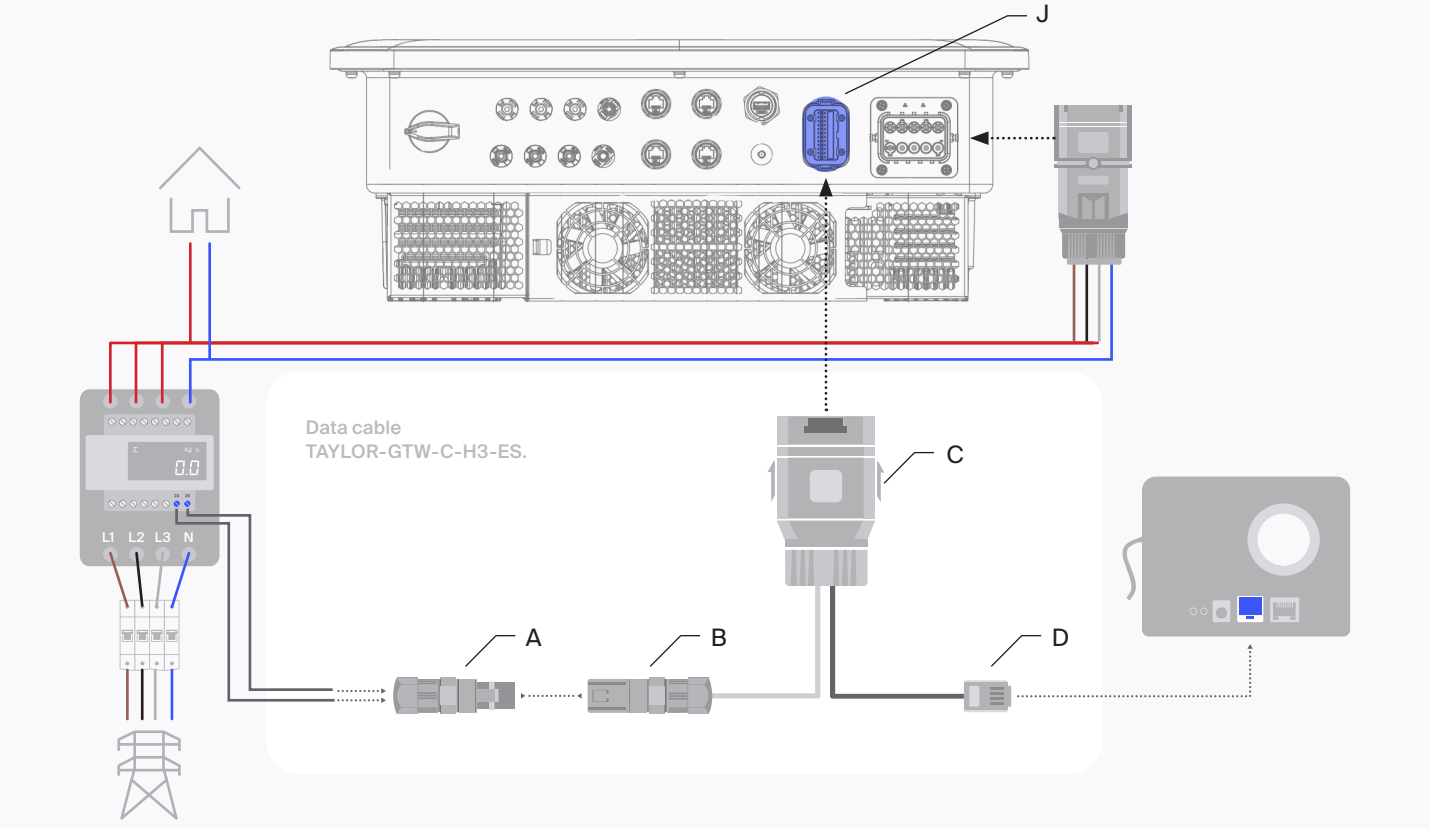
01.
Connect the energy meter to connector (A):

- Pin 24 on energy meter > pin 1 on connector (A)
- Pin 25 on energy meter > pin 2 on connector (A)

02.
Make sure to not connect any other devices to pin 24 and 25 on the energy meter.

03.
Connect connector (A) and connector (B) to complete the data cable.

04.
Connect connector (C) to port (J) of the inverter and the RJ11 connector (D) to the gateway data port.

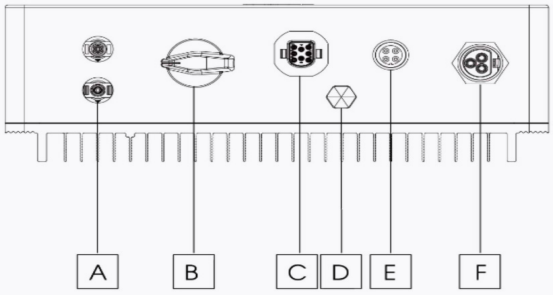


03.4 Fox ESS inverters instructions

Fox ESS S series - G2

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-F-S-G2.
Order separately from the gateway.



Instructions

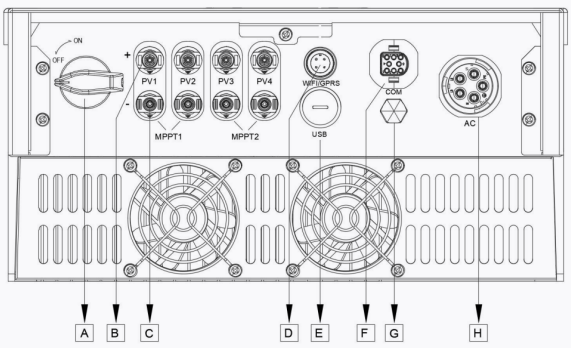
01.
Connect the plug to connection (C).

Important *Make sure the firmware of the inverter is updated to version 1.24/0.14/A32 or higher. Please contact Taylor support for help with firmware updates.*

Fox ESS T series - G3

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-F-T-G3-0.
Order separately from the gateway.



Instructions

01.
Connect the plug to connection (F).

Important *Make sure the firmware of the inverter is updated to version 1.19/1.00/1.14 or higher. Please contact Taylor support for help with firmware updates.*

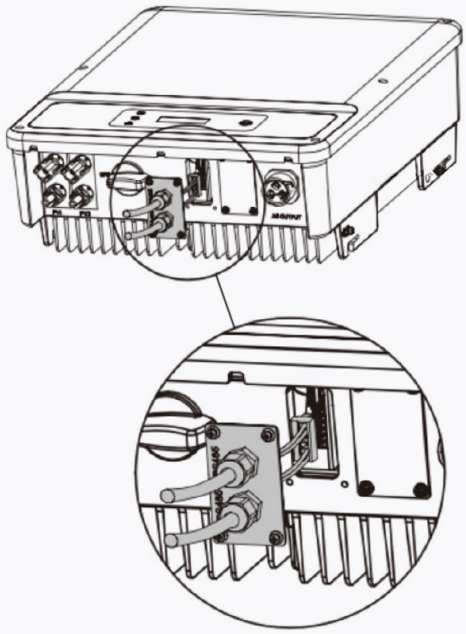
03.5 Goodwe inverters instructions

Goodwe DNS

DNS G3 is not compatible yet

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-03.
Order separately from the gateway.



Instructions

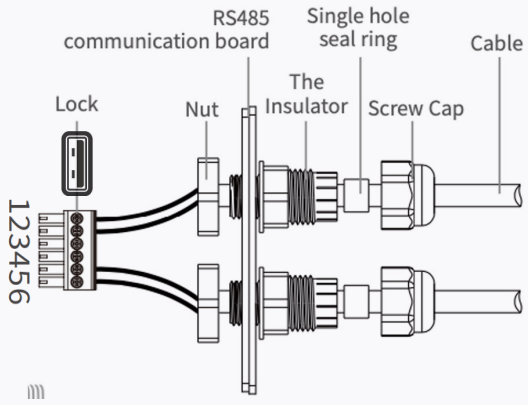
01.
Demount the RS485 board from the inverter.

02.
Pull the cable through the screwcap & RS485 board.

03.
Connect it onto the lock - using the table below.

Wire	Wire colour	Connect to pin
	Yellow	Not connected
-	Green	2
+	Red	1
	Black	Not connected

04.
Mount the RS485 board back as depicted on the right.



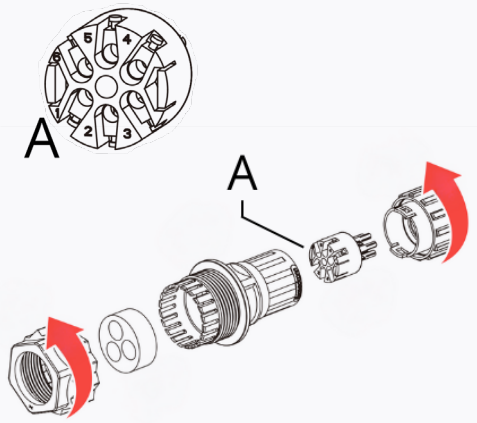
03.5 Goodwe inverters instructions

Goodwe SDT G2 Plus

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-03.
Order separately from the gateway.

B. Communication Connector
Delivered with the inverter.

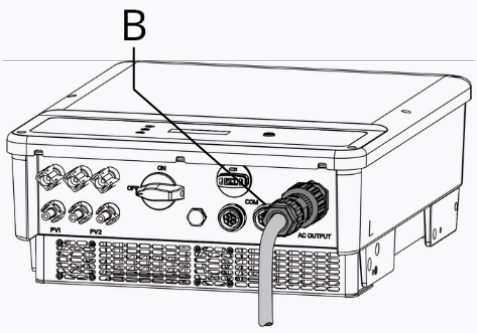


Instructions

01.
Route the taylor data cable through the cable gland (A)

02.
Connect the data cable to part A, refer to the table:

Wire	Wire colour	Connect to pin
	Yellow	Not connected
-	Green	1
+	Red	3
	Black	Not connected



03.
Assemble the connector.

04.
Connect the data cable to the COM port (B).

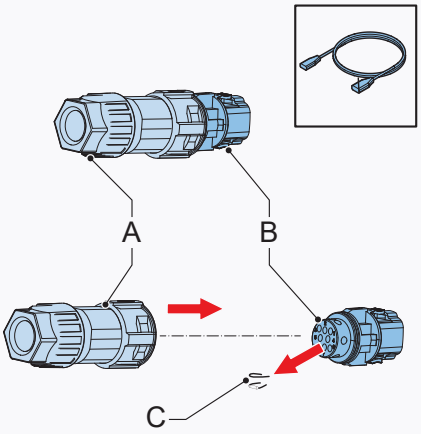
03.5 Goodwe inverters instructions

Goodwe XS

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-03.
Order separately from the gateway.

B. RS-485 Connector
Delivered with the inverter.



Instructions

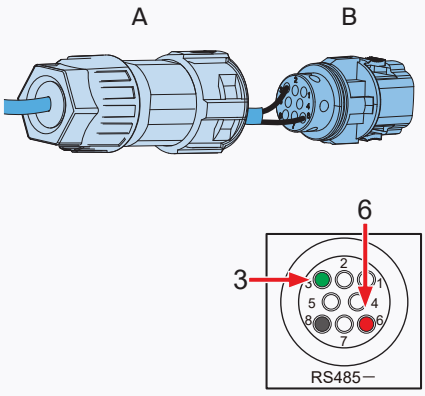
01.
Disassemble the connector (A)(B).

02.
Remove the resistor (C).

03.
Route the taylor data cable through the cable gland (A)

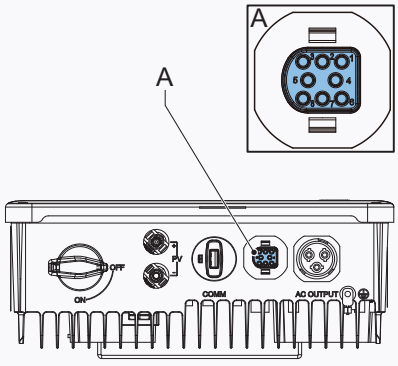
04.
Connect the data cable to part B, refer to the table:

Wire	Wire colour	Connect to pin
	Yellow	Not connected
-	Green	3
+	Red	6
	Black	Not connected



05.
Assemble the connector.

06.
Connect the plug to connection (A).



03.6 Solis inverters instructions

Solis

Necessary items

A. Data cable
Part number: TAYLOR-GTW-C-SL-02.
Order separately from the gateway.

Instructions

01.
Connect the plug to connection (A).
