

One device. Full POS Functionality.

.....
INFRASYS POS × **FREEDOMPAY**

A practical guide to unifying ordering and payment at the point of service.

Service breaks when systems do

Ordering on one device and payment on another creates **extra movement, handoffs, and visible delays.**

Leave the guest

Staff move back to a workstation or terminal.

Switch systems

The service moment is split into separate steps.

Recover manually

Frontline teams absorb the complexity when something fails.

From order to payment, in one flow

A mobile Android-based device brings Infrasys POS and FreedomPay together at the point of interaction.

01

Take the order

At the table, bar, pool, or point of service.

02

Manage the check

Handle guest checks and split bills.

03

Accept payment

Card or mobile payment on the same device.

04

Complete the transaction

Print or issue the receipt without changing devices.

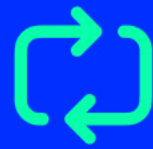

Less device switching. Full POS functionality.

The value is operational: keeping staff guest-facing while making workflows simpler and more consistent.

Continuous service

Complete interactions in one motion instead of separate steps.

Fewer handoffs

Reduce manual processes and movement between devices.

Consistent workflow

Create a repeatable service model across outlets.

Better visibility

Integrated payments can improve visibility across locations and operations.

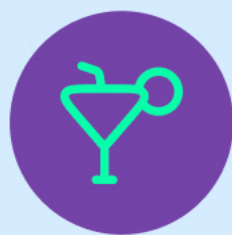

One mobile service pattern, **across every outlet**

The same order-to-payment workflow can follow staff **wherever service happens.**

Restaurant

Bar

Poolside service

Conference & Events

Leisure facilities

Pop-up venues

One device.

Full POS functionality.

The advantage of an all-in-one solution is not just fewer devices. It enables staff to manage the entire service flow while retaining full POS functionality.

Full POS capabilities

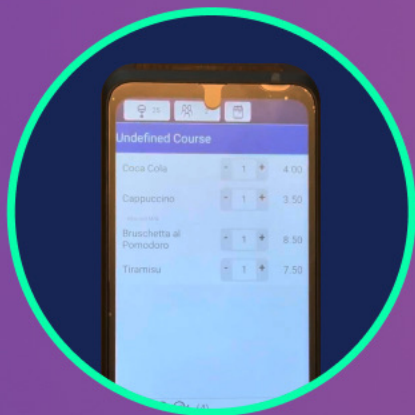

Take orders, manage checks, split bills, and complete transactions from the device.

Unified workflow

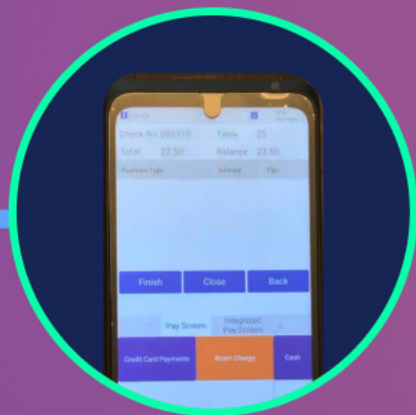

Order management and payment happen within a single workflow.

Less device switching

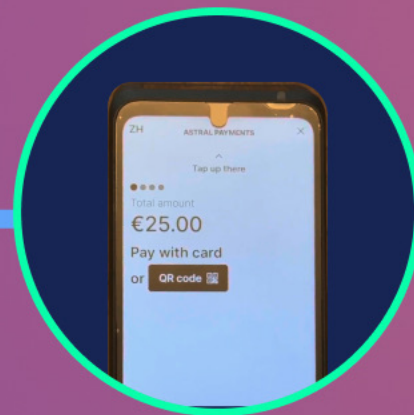

Keep staff focused on guests instead of moving between separate systems.

Order

Check

Bring payment into the service moment

Modern hospitality doesn't need
another terminal. **It needs a
simpler way for staff to complete
service wherever the guest is.**
