GMC Lifting Solutions

Water weights for lifeboat testing

GMC life boat testing kits can be used to apply an evenly distributed load to a lifeboat or any other object that has to be proof loaded.

Depending upon the required proof load, a number of water bags have to be spread evenly in the life boat and connected to the manifold.

The bags have to be filled to their maximum capacity, this way you
can be sure of the total weight, as the manufacturer guarantees a filled weight of 375 kg with a tolerance of 1%.

These specially designed Life boat testing bags of 375kg each are part of a complete life boat testing set. A remote system with pump, manifold, liter counter and filling hoses, allows proof load testing to be conducted safely, without entering the craft in the ‘dangerous’ overload situation.

The GMC life boat proof load testing set can also be used for load testing of gangways and small bridges.

One LB kit contains:

12 Waterbags 375kg
1 Manifold
1 Transport case
1 Emptying airpump
1 Set of hoses

Technical Data

Material PVC coated Polyester Fibre
Coupling 1" Camlock

Weight (filled)	375 kg
Weight (empty)	9 kg
Length	245 cm
Diameter	44 cm
