

When it comes to sealing natural stone it is crucial to understand that no two pieces are the same. Some Natural stones are more porous than others, some tend to stain easier and some tend to manage just fine. So when it comes to sealing natural stone it's an industry recommendation that you either seal prior to or at the commencement of installation is recommended. Doing so will allow you to keep your stone looking beautiful, avoid damages and allow easier maintenance & cleaning.

From experience, Tumbled recommends Actichem Products www.actichem.com.au

We recommend testing a cut sample of the stone prior to application, this will allow you to understand how the sealer will perform. The main aim is to have repellency of liquids with minimal colour change in the stone.

RESIDENTIAL PROJECTS

Actichem's Stone Sealer Gold is a premium water-based penetrating sealer professionally formulated to provide unparalleled protection of marble, limestone, travertine, granite and bluestone. Its advanced fluoro chemical polymer technology chemically interacts with the minerals in these fine stones to create a powerfully repellent surface. This product is recommended for paving/tiles, for Pool coping please see below for the recommended products.

Premium protection for up to 10-15 years. Independently performance tested by NATA approved laboratory.

Meets the requirements for Green Building Council of Australia Green Star Office Design V3 IEQ-13.

Michael Clarke from Briter Hard Floors is our recommended professional, please phone him on 0418 817 110

RESIDENTIAL PROJECTS

Actichem's Solv Sealer Gold, this sealer provides premium "nano-molecule" protection to, natural fine stone, sandstone, pavers, bricks, porous tiles and grout. Its extremely small molecular structure enables it to rapidly penetrate into the fine pores of natural stone, clay and cementitious materials. It provides long lasting, high performance protection against water and oil-based contaminants, efflorescence and spalling. **We recommend this product to be applied after Pool Coping has been dip sealed with CSD Pure and installed.**

Provides premium protection for up to 15 years. Independently performance tested by NATA approved stone laboratory.

POOL COPING

We recommend sealing all 6 sides of pool coping to be applied prior to installation and after any cuts are made. Defender CSD Pure is a premium consolidator and substrate strengthener designed for porous stone and masonry. It penetrates deeply to stabilise friable materials and significantly increase surface strength, making it ideal for heritage conservation, limestone protection, and the restoration of weakened stone. It reacts with the substrate material creating an extremely strong and durable bond which protects the substrate from structural weakening and erosion for many, many years.

FOR COASTAL ENVIRONMENTS

Defender CSD 50 is a consolidator and water repellent for stone. Actichem's AP677 Defender CSD 50 is a proprietary impregnating sealer which consolidates friable material, strengthens the substrate and provides powerful water repellent properties. such as sandstone, limestone, clay and concrete. It reacts with the substrate material creating.

Although suited to a wide range of materials it is most popular with construction materials an extremely strong and durable bond which protects the substrate from structural weakening and erosion for many, many years.

CLEANING MAINTENANCE

For ongoing maintenance and regular cleaning, we recommend a PH Neutral Cleaner. Tumbled Recommends the Actichem Pro Neutro. There are products for all types of cleaning, depending on what you would like to clean, our staff can discuss your requirements and recommend the best products for you.
