

Capability Statement

Navigating Compliance. Empowering Capability.

Australia's Defence ecosystem is undergoing rapid transformation. Strategic initiatives under AUKUS and major sovereign capability programs—such as SSN-AUKUS, guided weapons, and enhanced cyber resilience—are accelerating demand for secure and compliant supply chains. These programs rely on contributions from hundreds of capable Australian suppliers—but many risk being left behind due to one shared obstacle: security compliance.

Our Solution: DISPulse

DISPulse is a purpose-built Governance, Risk and Compliance (GRC) platform tailored for the Defence Industry Security Program (DISP). It enables both primes and suppliers to meet compliance requirements faster, with greater consistency, and less overhead. Built by Defence industry—for Defence industry.

For Suppliers

Accelerated DISP Readiness: Step-by-step workflows, templated policies, and automated evidence capture reduce time and effort for DISP onboarding.

Simplified Personnel Security: From clearance tracking and onboarding workflows to compliance training and visitor logs, Personnel vetting and onboarding is streamlined and structured within a single platform.

Framework-Ready: Aligned with ISM, Essential 8, NIST, and CMMC frameworks, the platform enables SMEs to meet multiple regulatory requirements simultaneously.

Focus on Your Core Business: SMEs can meet DISP requirements without the overhead of hiring internal security officers or external consultants—freeing up resources to focus on delivering capability.

For Supply Chain Managers

Scalable Supplier Management: Manage and monitor large supplier networks through central dashboards with DISP domain tracking.

Real-Time Visibility: Access up-to-date risk postures, DISP maturity, and supply chain readiness metrics to make informed decisions.

Standardised Assurance: Reduce audit complexity and uplift quality through structured document controls, evidence management, and automated audit reporting.

Sovereign Supply Chain Activation: Map DISP-ready suppliers across tiers to identify, qualify, and mobilise sovereign capability when it matters.

The Platform That Powers Secure Capability

What DISPulse Delivers

DISPulse is engineered around the specific needs of DISP. It supports compliance across all four security domains—Governance, ICT, Personnel, and Physical Security—and helps bridge the gap between industry capability and regulatory requirement.

Smaller businesses can access guided onboarding tools, pre-loaded document templates, and self-service assessments that accelerate DISP preparation without drawing resources away from their core business.

Prime contractors and integrators gain visibility over their supplier base like never before—track DISP maturity, monitor potential bottlenecks, and make data-driven onboarding decisions across multi-tier supply chains.

From pre-engagement due diligence to audit preparation, DISPulse consolidates security documentation, workflows, evidence collection, and training management—ensuring readiness and reducing risk across every contract stage.

Readiness at Speed:

DISPulse dramatically reduces the time required for suppliers to become DISP-ready. By accelerating onboarding and compliance processes, it ensures that high-priority Defence programs can mobilise capability without delay—meeting timelines, not missing them.

Security by Design:

Compliance isn't an afterthought. DISPulse embeds security into day-to-day operations, transforming DISP from a paperwork exercise into a living system of controls, workflows, and accountability that scale with organisational growth.

Lower Friction, Greater Capability:

Instead of being bogged down in complex documentation and regulatory guesswork, suppliers can focus on delivering the innovation, products, and services they're known for—boosting participation across the Defence ecosystem without draining resources.

National Advantage: In an era of growing geopolitical complexity, sovereign capability depends on more than manufacturing scale—it requires secure, trusted, and DISP-aligned supply chains. DISPulse ensures that compliance doesn't become a barrier, but a force multiplier for sovereign industry readiness.

Sustainable Compliance, Not One-Off Effort:

DISPulse is not just about getting through an audit—it's about maintaining readiness over time. With automated updates, role-based workflows, and ongoing visibility, compliance becomes a continuous practice rather than a recurring scramble.
