

### ABOUT OUR FOUNDERS

## EXOWATT FOUNDERS

Hannan Happi  
**CEO & Co-founder**

Hannan Happi is the CEO and Co-founder of Exowatt. A mechanical engineer by training, Hannan studied at the Technical University of Munich and the Stanford Graduate School of Business.

Before founding Exowatt, Hannan held leadership and engineering roles at General Electric, Siemens, Accenture, and Tesla. He later co-founded and led Volansi, a vertical take-off and landing drone startup focused on autonomous logistics, which was acquired by a major defense firm.

Now based in Miami, Florida, Hannan and the Exowatt team are focused on solving one of the most urgent infrastructure challenges of our time: delivering scalable, dispatchable, on-site energy solutions that keep pace with the digital world's accelerating demands.

Jack Abraham  
**Co-founder**

Jack Abraham is the Co-founder of Exowatt. He is also the Founder, CEO, and Managing Partner of Atomic, the pioneering venture studio behind breakout companies like Hims & Hers, OpenStore, Homebound, Butter, and Exowatt. He created Atomic's now widely emulated studio model, focused on systematically building and investing in companies conceived and launched in-house. Through Atomic, Jack has co-founded dozens of companies, including Hims & Hers, which became the second-fastest company in U.S. history to reach a \$1B valuation and went public just three years after launch (\$HIMS).

Prior to Atomic, Jack founded Milo, which he sold to eBay at age 24. As an angel investor, he has backed several \$1B+ companies including Pinterest, Postmates (where he helped originate the concept), Uber, and Flatiron Health. Jack studied at the Wharton School of the University of Pennsylvania as a Joseph Wharton Scholar, where he designed his own major in Technological Entrepreneurship.
