

# Supply Chain Discovery

## See beyond your perimeter.

ThingsRecon uncovers your extended digital ecosystem by continuously mapping and monitoring supply chain exposures, helping you understand where your real risk lives. Powered by our signature context and Digital Proximity insights, the platform gives you clear, actionable visibility into the cyber hygiene of connected suppliers—so you can assess, prioritise, and act before risks ripple downstream.

## Why ThingsRecon?

### Automated Supply Chain Discovery

Documents and explains your connections, even between vendors and your organisation's Software Bill of Materials (SBOM).

### Digital Proximity & Context

Measures impact and proximity to your core systems, providing clear insights and actionable reports.

### Evidence-Based Prioritisation

Scores third-party security posture with over 100 hygiene indicators, including insecure forms, headers, SSL, and misconfigurations.

### Data Residency

Points of presence in North America and Europe ensure sensitive data stays compliant, supporting sovereignty, performance, and trust.

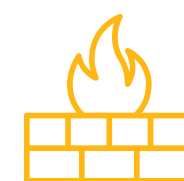

## Use Cases

Third-party and supplier cyber risk assessment

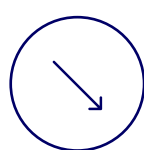

Continuous monitoring of connections and dependencies

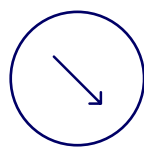

Discovery of unmanaged assets and shadow IT

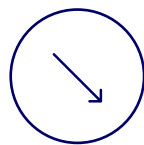

Compliance-ready reporting (DORA, NIS2, SEC)

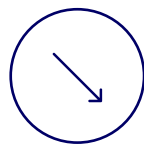

**Seamless Integration:** Easily plugs into existing workflows (GRC, EASM, ticketing tools, and more).

**Improved Resilience:** Uncovers overlooked supplier risks before they impact operations.

**Clear Remediation Plans:** Shows which suppliers, services, and applications need attention first.

**Agentless, Non-Intrusive Scanning:** No installation needed to perform discovery and assessment.

### About ThingsRecon

Trusted by Fortune 500 enterprises, our Attack Surface and Supply Chain discovery solutions continuously track exposure, uncover vulnerabilities, and assess cyber risks. Overlooked assets, forgotten connections, vulnerable suppliers... We call this Digital Proximity—the tangled web of applications, vendors, and infrastructure that forms your true attack surface. By reducing misconfigurations, strengthening security posture, and streamlining external threat management, ThingsRecon helps organisations stay resilient and meet compliance requirements in an ever-evolving digital landscape.
