

GrowMás Garlic Study – Southern Ontario (2025)

This garlic trial in Southern Ontario demonstrated a **16% yield increase** after just **3 foliar applications** of GrowMás. Chemical analysis by A&L; Canada Labs showed enhanced nutrient uptake, particularly in calcium and potassium, along with increased bulb density.

Key Highlights:

- +16% yield increase vs. control
- ↑ Potassium: +9.3%
- ↑ Calcium: +19.1%
- ↑ Specific Gravity (bulb density)
- Maintained nutrient balance across key minerals
- Benefits observed after only 3 applications

These results confirm GrowMás as a powerful biostimulant for garlic growers aiming to boost yields, enhance quality, and improve plant health with minimal intervention.
