

Accelerate community impact with innovative public health software

→ WHAT WE DO

● Cross-Program Integration

Enables full integration of data across all modules, allowing seamless communication and data sharing within the system.

● Mass Vaccine Events

Supports COVID, MPX, Flu, and other vaccinations with self-registration, walk-in, and scheduling options. The process is entirely electronic and paperless, with HL7 and other connections to state registries.

● Mass Lab Events

Facilitates HIV, MPX, and other lab testing events with self-registration, walk-in, and scheduling capabilities.

● Infectious Disease Tracking

Enables tracking of symptoms, exposed contacts, and various diseases through a paperless, configurable process.

● Program Management

Allows setup and launch of programs (FP, Immuns, STD, TB, Primary Care, Maternal, Counseling, EH, etc.). It's configurable to meet state and federal requirements such as Title X reports, TB reports, STD reports, and behavioral health / counseling requirements

● Advanced Billing Capabilities

837, 835, CMS 1500, invoicing, grants, insurance eligibility and more...

● Customized Scheduling Options

Flexible Scheduling - Schedule by clinic, resource, program, or provider. A self-schedule option is also available for patients.

SmartTracker revolutionizes public health with an innovative SaaS solution that enhances patient and staff experiences while boosting efficiency and reducing costs.

SmartTracker has achieved ONC (Office of the National Coordinator) Health IT Certification, demonstrating full compliance with federal standards for electronic health record (EHR) systems.

What this means for you:

-  **Public Health Reporting** – Send data to registries & public health agencies.
-  **Electronic Case Reporting (eCR)** – Real-time, automated case reporting.
-  **Electronic Prescribing (eRx)** – Electronic medication orders to pharmacies.
-  **Seamless Care Transitions** – Share records across providers and settings.
-  **Patient Empowerment** – Secure access to view, download & share data.
-  **Enterprise Security** – MFA, encryption, audit trails, role-based access.
