

Data Pipelines That Think, Act, and Protect – Autonomously.

Databahn has always structured and moved security data intelligently — built from the ground up to think while data moves. The next evolution goes further, embedding **Autonomous In-Stream Data Intelligence (AIDI)** directly into the AI-native data fabric to continuously validate, act, and protect data before it reaches any downstream platform or security system.

80%

Faster Onboarding

Connect any source, instantly with Smart Edge and Forge.

40–70%

Data Reduction

Less noise. More signal — with prebuilt volume control library.

100%

Data Coverage

Zero blind spots with end-to-end data validation and coverage mapping.

AI-Ready

Data

Clean, enriched, and structured data with contextual enrichment.

The Pipeline Now Thinks *While Data Moves.*

Cruz AI made pipelines intelligent. **Autonomous In-Stream Data Intelligence (AIDI)** takes it further — embedding autonomous agents directly inside the pipeline that continuously validate, act, and protect your data in motion, before it reaches any downstream system.

Not Features. Not Add-Ons. A Continuous Control Layer for Your Data.

Databahn introduces **Agent Farm**, with six purpose-built AI agents that operate autonomously inside the pipeline from day one. Each addresses a specific function — together they form a continuous intelligence layer that validates, enriches, and protects your data in motion, without manual intervention or additional tooling.

<p>Forge </p> <p>Automatically generates and maintains connectors — no custom engineering required.</p>	<p>Atlas </p> <p>Builds real-time asset and identity context directly from your data stream, continuously.</p>	<p>Compass </p> <p>Maps your data coverage to MITRE ATT&CK, giving your team continuous visibility.</p>
<p>Pulse </p> <p>Monitors pipeline health, data freshness, and schema drift before they become gaps.</p>	<p>Signal </p> <p>Validates end-to-end data completeness so nothing goes missing.</p>	<p>Sentry </p> <p>Detects and protects sensitive data in motion before it reaches any downstream system.</p>

Your Journey to Data Autonomy

The path from pipelines to autonomous data systems isn't a switch — it's a progression. Databahn meets you at every stage and takes you forward.
