

# The AI-native IT and security data pipeline for enterprises

Enterprises have to manage growing volumes of security data from increasingly complex and hybrid environments, including hundreds of sources and applications. Databahn replaces patchwork stacks with an AI-powered platform that eliminates the manual work of IT and security data engineering – giving every enterprise the power to unlock insights and redefine security telemetry from being a burden into their most powerful asset for cybersecurity, innovation, and growth.

## Collect telemetry data from every source

Add sources in minutes with connectors or AI-powered parsers

**500+**

Built-in Connectors

## Resilient & Scalable data collection

No gaps or breaks in data with failover handling and rerouting

**100%**

Lossless Collection

## Optimize data for fast & effective analysis

Reduce, contextualize & prioritize security-relevant data for SIEMs

**900+**

Reduction Rules

## AI-powered management & automation

Route, transform, track, and manage data pipelines with AI

**80%+**

Reduced Data Ops Effort

# Why leading enterprises use Databahn

We help Fortune 500 and Global 2000 companies streamline, scale, and make sense of their security and operational data.

## Speed & Flexibility

Integrate & connect sources and destinations in minutes. No scripting, no bottlenecks – just fast, reliable data movement across your ecosystem.

## Operational Simplicity

Leverage AI to automate laborious data engineering tasks and simplify threat detection with natural language-based querying across silos with context enrichment.

## Cost Efficiency

Reduce SIEM and storage costs by at least 50% with a combination of native content and AI-powered insights in just two weeks without compromising security.

## Data Independence

Own and control your enterprise data by freeing it from the limits of vendor formats and locked-in storage, empowering your data strategy with flexibility.

## AI Transformation

Build an optimized, AI-ready data foundation from your telemetry to create an active ecosystem of Gen AI applications to unlock next-gen insights and analytics.

## Testimonials

*We have recently started a journey with Databahn, and I can't speak highly enough about the product or the amazing team at Databahn. Take the time to explore this technology and learn what this could mean for you.*

- **Greg Stewart**, Senior Director, Cybersecurity, CSL Behring

*Before Databahn, we were stuck with twelve different Sentinel instances – each one the byproduct of years of acquisitions. In less than six weeks, Databahn helped us collapse that sprawl into a single, unified SOC architecture. Now every part of our business—enterprise, IoT, and OT—flows through one consistent pipeline, finally giving us the visibility and control we'd been chasing for years.*

- **Mark Ruiz**, Senior Director, Cyber Risk and Defense, BD
