

Provides an unintrusive employee checkpoint at the start of each shift

Takes less than a minute per employee to test and deliver results

Ideally suited to high-risk and hazardous work environments

OSPAT (Occupational Safety Performance Assessment Technology) from Permaconn is the smart way to help keep both workers and workplaces safe.

OSPAT tests for employee performance impairment stemming from a range of factors, including fatigue, stress, drugs and alcohol.

Designed by safety experts for construction, mining, transport, industrial, and other high-risk, safety-sensitive industries, OSPAT is a real-time, scientifically validated fitness-for-work solution. It mitigates risk while supporting safety compliance and duty of care.

Practical Features:

- Takes less than a minute per employee to complete.
- Keeps individual assessment data private and protected.
- Relays the result in real time to both the worker and their supervisor.
- Has the capacity to test in multiple languages.
- Delivers comprehensive reports and analytical capabilities.
- Supplies information on both individuals and teams.

Specifications:

Compatibility:	A range of indication technologies and security access systems Windows TCP/IP
Power input:	90 to 264 VAC @48 – 63 Hz
Power consumption:	30 to 40 W
Display:	30cm (diagonal) back-lit TFT (built-in)
Network:	RJ45 gigabit ethernet LAN with 300Mb/s maximum throughput TCP/IP communications
ID technologies supported:	PIN (4 to 9 digits, configurable) Fingerprint (optional extra) Assorted card reader technologies (optional extra)
Shipping weight:	4.4kg per testing station
